SEC 873 (5-06)

Potential persons who are to respond to the collection of information contained in this form are not required to respond unless the form displays a currently valid OMB control number.

Item 8.01 Other Events

On February 4, 2008, Little Squaw Gold Mining Company (Little Squaw or the Company) announced that it has mobilized a drill to the Marisol gold property located just south of the U.S.-Mexico border in the State of Sonora. The Company intends to complete at least ten diamond core drill holes for 1,500 meters (5,000 feet) to test for an ore target that has been identified by the Company.

The Marisol property is in the Cucurpe mining district where some 2 million ounces of gold have been produced from epithermal-type deposits. The property consists of 541 hectares (1,337 acres) located 14 km (9 miles) east of the million-ounce San Francisco gold mine. The drill target at Marisol consists of two subparallel, gold-bearing structural trends in Cretaceous sediments that merge together both at shallow depth and along strike. Junctions such as this may provide the ground preparation necessary for the occurrence of a large volume of gold mineralization.

For additional information, please see the press release, incorporated herein as exhibit 99.1.

Item 9.01

Financial Statements and Exhibits.

(d) Exhibits

Exhibit 99.1 - Press Release, February 4, 2008
