QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE
ACT OF 1934

For the quarterly period ended March 28, 2014

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE
ACT OF 1934

For the transition period from _____ to _____
Commission file number 001-15885

MATERION CORPORATION
(Exact name of Registrant as specified in charter)

Ohio 34-1919973
(State or other jurisdiction of incorporation or organization) (I.R.S. Employer Identification No.)

6070 Parkland Blvd., Mayfield Hts., Ohio 44124
(Address of principal executive offices) (Zip Code)

Registrant's telephone number, including area code:
216-486-4200

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

As of April 23, 2014, there were 20,594,188 common shares, no par value, outstanding.

PART I FINANCIAL INFORMATION
MATERION CORPORATION AND SUBSIDIARIES

Item 1. Financial Statements

The consolidated financial statements of Materion Corporation and its subsidiaries for the first quarter ended March 28, 2014 are as follows:

<u>Consolidated Statements of Income -</u> <u>First quarter ended March 28, 2014 and March 29, 2013</u>	<u>2</u>
<u>Consolidated Statements of Comprehensive Income -</u> <u>First quarter ended March 28, 2014 and March 29, 2013</u>	<u>3</u>
<u>Consolidated Balance Sheets -</u> <u>March 28, 2014 and December 31, 2013</u>	<u>4</u>
<u>Consolidated Statements of Cash Flows -</u> <u>First quarter ended March 28, 2014 and March 29, 2013</u>	<u>5</u>

Net change in cash and cash equivalents	(3,461)	4,186
Cash and cash equivalents at beginning of period	22,774	16,056
Cash and cash equivalents at end of period	\$19,313	\$20,242
See Notes to Consolidated Financial Statements.		

Note A — Accounting Policies

In management's opinion, the accompanying consolidated financial statements contain all adjustments necessary to present fairly the financial position as of March 28, 2014 and December 31, 2013 and the results of operations for the first quarter ended March 28, 2014 and March 29, 2013. All adjustments were of a normal and recurring nature. Certain amounts in prior years have been reclassified to conform to the 2014 consolidated financial statement presentation.

Note B — Inventories

Inventories on the Consolidated Balance Sheets are summarized as follows:

(Thousands)	Mar. 28, 2014	Dec. 31, 2013
Principally average cost:		
Raw materials and supplies	\$42,235	\$42,352
Work in process	211,520	203,107
Finished goods	52,022	45,503
Gross inventories	305,777	290,962
Excess of average cost over LIFO inventory value	78,816	77,570
Net inventories	\$226,961	\$213,392

Note C — Pensions and Other Post-employment Benefits

The following is a summary of the first quarter 2014 and 2013 net periodic benefit cost for the domestic pension plans (which include the defined benefit plan and the supplemental retirement plans) and the domestic retiree medical plan.

(Thousands)	Pension Benefits		Other Benefits	
	First Quarter Ended		First Quarter Ended	
	Mar. 28, 2014	Mar. 29, 2013	Mar. 28, 2014	Mar. 29, 2013
Components of net periodic benefit cost				
Service cost	\$1,936	\$2,356	\$34	\$76
Interest cost	2,444	2,353	169	311
Expected return on plan assets	(3,013)	(2,996)	—	—
Amortization of prior service cost (benefit)	(109)	(86)	(374)	29
Amortization of net loss	1,275	1,933	—	—
Net periodic benefit cost (benefit)	\$2,533	\$3,560	\$(171)	\$416

The Company made contributions to the domestic defined benefit pension plan of \$7.8 million in the first quarter of 2014.

The Company has notified participants of planned changes to the domestic retiree medical plan, including changing the benefit formula for participants covered by the plan. The revised benefit formula is designed to lower costs for the Company and the majority of plan participants. As a result of this change, the plan liability on the Company's Consolidated Balance Sheet was reduced by \$14.0 million in the first quarter 2014, with the offset increasing other comprehensive income, a component of shareholders' equity. The liability reduction will be recognized in earnings over the average remaining service life.

Note D — Contingencies

Materion Brush Inc., one of the Company's wholly owned subsidiaries, is a defendant from time to time in legal proceedings where the plaintiffs allege they have contracted chronic beryllium disease (CBD) or related ailments as a result of exposure to beryllium. The Company will record a reserve for CBD or other litigation when a loss from either settlement or verdict is probable and estimable. Claims filed by third-party plaintiffs where the alleged exposure occurred prior to December 31, 2007 may be covered by insurance subject to an annual deductible of \$1.0 million. Reserves are recorded for asserted claims only and defense costs are expensed as incurred. Two CBD cases, which were filed in prior periods, were outstanding as of the end of the first quarter 2014.

No other CBD cases were filed or dismissed during the first quarter 2014. A loss reserve of \$0.2 million was recorded for these two cases as of the end of the first quarter 2014.

The Company has an active environmental compliance program and records reserves for the probable cost of identified environmental remediation projects. The reserves are established based upon analyses conducted by the Company's engineers and outside consultants and are adjusted from time to time based upon ongoing studies, the difference between actual and estimated costs and other factors. The reserves may also be affected by rulings and negotiations with regulatory agencies. The undiscounted reserve balance was \$4.8 million as of the end of the first quarter 2014 and \$4.8 million at December 31, 2013. Environmental projects tend to be long term and the final actual remediation costs may differ from the amounts currently recorded.

Early in the second quarter 2014, the Company reached an agreement with its insurance carrier to settle the outstanding precious metal theft claim for \$6.8 million. The cash was received and the benefit of this settlement will be recorded in the Company's financial statements in the second quarter 2014.

Note E — Segment Reporting

(Thousands)	Advanced Material Technologies	Performance Alloys	Beryllium and Composites	Technical Materials	Subtotal	All Other	Total
First Quarter 2014							
Sales to external customers	\$ 163,197	\$ 66,685	\$ 15,497	\$ 13,550	\$258,929	\$—	\$258,929
Intersegment sales	497	519	147	120	1,283	—	1,283
Operating profit (loss)	7,604	3,548	1,102	182	12,436	(1,383)	11,053
Assets	318,561	266,977	145,216	20,865	751,619	39,722	791,341
First Quarter 2013							
Sales to external customers	\$ 193,853	\$ 74,522	\$ 12,322	\$ 18,472	\$299,169	\$—	\$299,169
Intersegment sales	748	430	70	230	1,478	—	1,478
Operating profit (loss)	3,351	7,236	(1,296)	1,436	10,727	(1,205)	9,522
Assets	334,325	272,245	135,166	23,417	765,153	47,247	812,400

Note F — Stock-based Compensation Expense

Stock-based compensation expense was \$1.4 million in the first quarter 2014 and \$1.2 million in the first quarter 2013.

The Company granted approximately 25,000 performance-based restricted stock units to certain employees in the first quarter 2014. The fair value will be expensed over the vesting period of three years. The final share payout to the employees will be based upon the Company's total return to shareholders over the vesting period relative to a peer group's performance over the same period.

The Company received \$0.1 million for the exercise of approximately 4,000 options during the first quarter 2014 and \$0.6 million for the exercise of approximately 40,000 options during the first quarter 2013. Exercises of stock appreciation rights totaled approximately 27,000 in the first quarter 2014 and 28,000 in the first quarter 2013.

Note G — Other-net

Other-net income (expense) for the first quarter 2014 and 2013 is summarized as follows:

(Thousands)	First Quarter Ended	
	Mar. 28, 2014	Mar. 29, 2013
Foreign currency exchange/translation (loss) gain	\$(52) \$719
Amortization of intangible assets	(1,322) (1,292)
Metal consignment fees	(1,866) (1,817)
Net gain on disposal of fixed assets	2,637	33
Other items	240	(123)
Total	\$(363) \$(2,480)

Note H — Income Taxes

The tax expense of \$3.0 million in the first quarter 2014 was calculated by applying a rate of 29.2% against income before income taxes, while the tax expense of \$1.9 million in the first quarter 2013 was calculated by applying a rate of 22.0% against the income before income taxes in that period.

The differences between the statutory and effective rates in the first quarter of both years was due to the impact of percentage depletion, the production deduction, foreign source income and deductions, executive compensation, state and local taxes and other factors. The research and experimentation credit also reduced the effective tax rate in the first quarter 2013. The U.S. Congress has not extended the credit for 2014, so no benefit has been recognized in 2014. A discrete tax benefit of \$0.6 million was recorded in the first quarter 2013 primarily for the research and experimentation credit for 2012 that was not extended by the U.S. Congress until 2013. Accounting regulations require tax expense to be recorded based upon the laws that were in effect as of the end of the period.

Note I — Depreciation and Amortization

The Company received \$63.5 million from the U.S. Department of Defense (DoD) in previous periods for reimbursement of the DoD's share of the cost of capital equipment acquired by the Company under a Title III contract. The Company recorded the cost of the equipment in property, plant and equipment and the reimbursements as unearned income, a liability on the Consolidated Balance Sheets. The equipment was placed in service during the third quarter 2012 and its full cost is being depreciated in accordance with Company policy. The unearned income liability is being reduced ratably with the depreciation expense recorded over the life of the equipment.

In the first quarter of 2014, the depreciation expense on the equipment subject to reimbursement was \$1.2 million. Unearned income was reduced by \$1.2 million, accordingly, with the offset recorded as a credit to cost of sales. Depreciation, depletion and amortization expense on the Consolidated Statement of Cash Flows is shown net of the reduction in unearned income.

Amortization of mine development costs are initially recorded in inventory and subsequently recorded into cost of sales in the period that the inventory is sold. Depreciation, depletion and amortization depicted on the Consolidated Statement of Cash Flows, including the mine development costs amortized into inventory, totaled \$12.1 million in the first quarter 2014 and \$8.6 million in the first quarter 2013. Depreciation, depletion and amortization expense recorded in operating profit in the Consolidated Statement of Income totaled \$9.8 million in the first quarter 2014 and \$9.8 million in the first quarter 2013.

Note J — Fair Value of Financial Instruments

The Company measures and records financial instruments at their fair values. A fair value hierarchy is used for those instruments measured at fair value that distinguishes between assumptions based on market data (observable inputs) and the Company's assumptions (unobservable inputs). The hierarchy consists of three levels:

Level 1 — Quoted market prices in active markets for identical assets and liabilities;

Level 2 — Inputs other than Level 1 inputs that are either directly or indirectly observable; and

Level 3 — Unobservable inputs developed using estimates and assumptions developed by the Company, which reflect those that a market participant would use.

The following table summarizes the financial instruments measured at fair value in the Consolidated Balance Sheets as of March 28, 2014:

(Thousands)	Total	Fair Value Measurements		
		Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Financial Assets				
Directors' deferred compensation investments	\$540	\$540	\$—	\$—
Foreign currency forward contracts	164	—	164	—
Total	\$704	\$540	\$164	\$—
Financial Liabilities				
Directors' deferred compensation liability	\$540	\$540	\$—	\$—
Foreign currency forward contracts	260	—	260	—
Total	\$800	\$540	\$260	\$—

The Company uses a market approach to value the assets and liabilities for outstanding derivative contracts in the table above. Outstanding contracts are valued through models that utilize market observable inputs including both spot and forward prices for the same underlying currencies and metals. The carrying values of the other working capital items and debt on the Consolidated Balance Sheets approximate their fair values as of March 28, 2014.

Note K — Derivative Instruments and Hedging Activity

The Company uses derivative contracts to hedge portions of its foreign currency and precious metal exposures. The objectives for using derivatives in these areas are as follows:

Foreign Currency. The Company sells products to overseas customers in their local currencies, primarily the euro and yen. The Company uses foreign currency derivatives, mainly forward contracts and options, to hedge these anticipated sales transactions. The purpose of the hedge program is to protect against the reduction in dollar value of the foreign currency sales from adverse exchange rate movements. Should the dollar strengthen significantly, the decrease in the translated value of the foreign currency sales should be partially offset by gains on the hedge contracts. Depending upon the methods used, the hedge contract may limit the benefits from a weakening U.S. dollar.

The use of forward contracts locks in a firm rate and eliminates any downside from an adverse rate movement as well as any benefit from a favorable rate movement. The Company may from time to time choose to hedge with options or a tandem of options known as a collar. These hedging techniques can limit or eliminate the downside risk but can allow for some or all of the benefit from a favorable rate movement to be realized. Unlike a forward contract, a premium is paid for an option; collars, which are a combination of a put and call option, may have a net premium but they can be structured to be cash neutral. The Company will primarily hedge with forward contracts due to the relationship between the cash outlay and the level of risk.

The use of foreign currency derivative contracts is governed by policies approved by the Audit Committee of the Board of Directors. A team consisting of senior financial managers reviews the estimated exposure levels, as defined by budgets, forecasts and other internal data, and determines the timing, amounts and instruments to use to hedge that exposure within the confines of the policy. Management analyzes the effective hedged rates and the actual and projected gains and losses on the hedging transactions against the program objectives, targeted rates and levels of risk assumed. Hedge contracts are typically layered in at different times for a specified exposure period in order to minimize the impact of rate movements.

Precious Metals. The Company maintains the majority of its precious metal production requirements on consignment in order to reduce the working capital investment and the exposure to metal price movements. When a precious metal product is fabricated and ready for shipment to the customer, the metal is purchased out of consignment at the current market price and that price forms the basis for the price to be charged to the customer.

In certain circumstances, a customer may want to establish the price for the precious metal when the sales order is placed rather than at the time of the shipment. Setting the selling price at a different date than when the material would be purchased potentially creates an exposure to movements in the market price of the metal. Therefore, in these limited situations, the Company may elect to enter into a forward contract to purchase a stated quantity of precious metal at a fixed price on a specified date in the future. The price in the forward contract serves as the basis for the price to be charged to the customer. By so doing, the selling and purchase prices are matched and the Company's market price exposure is reduced.

The Company refines precious metal-containing materials for its customers and typically will purchase the refined metal from the customer at current market prices. In limited circumstances, the customer may want to fix the price to be paid at the time of the order as opposed to when the material is refined. The customer may also want to fix the price to be paid for a number of orders over a period of time. The Company may then enter into a hedge contract, either a forward contract or a swap, to fix the price for the estimated quantity of refined metal to be purchased thereby reducing the exposure to adverse movements in the market price of the metal.

The Company will only enter into a derivative contract if there is an underlying identified exposure. Contracts are typically held until maturity. The Company does not engage in derivative trading activities and does not use derivatives for speculative purposes. The Company only uses currency hedge contracts that are denominated in the same currency as the underlying exposure and precious metal hedge contracts denominated in the same metal as the underlying exposure.

All derivatives are recorded on the balance sheet at their fair values. If the derivative is designated and effective as a cash flow hedge, changes in the fair value of the derivative are recognized in other comprehensive income (OCI) until the hedged item is recognized in earnings. The ineffective portion of a derivative's fair value, if any, is recognized in earnings immediately. If a derivative is not a hedge, changes in the fair value are adjusted through income. The fair values of the outstanding derivatives are recorded on the balance sheet as assets (if the derivatives are in a gain position) or liabilities (if the derivatives are in a loss position). The fair values will also be classified as short term or long term depending upon their maturity dates.

The outstanding foreign currency forward contracts had a notional value of \$30.9 million as of March 28, 2014. All of these contracts were designated and effective as cash flow hedges. The fair value of the yen forward contracts of \$0.2 million was recorded in prepaid expenses and the fair value of a loss of \$0.3 million on the euro forward contracts was recorded in other liabilities and accrued items on the Consolidated Balance Sheets as of March 28, 2014.

There was no ineffectiveness associated with the contracts outstanding at March 28, 2014 and no ineffectiveness expense was recorded in the first quarter of 2014 or 2013.

Changes in the fair value of outstanding cash flow hedges recorded in OCI totaled \$(0.1) million at March 28, 2014 and \$1.0 million at March 29, 2013. The Company expects to relieve substantially the entire balance in OCI as of March 28, 2014 to income on the Consolidated Statements of Income during the twelve month period beginning March 29, 2014. See Note L to the Consolidated Financial Statements for additional OCI details.

Note L — Accumulated Other Comprehensive Income

Changes in the components of accumulated other comprehensive income, including the amounts reclassified out, for the first quarter of 2014 and 2013 are as follows:

Edgar Filing: MATERION Corp - Form 10-Q

Reclassifications from accumulated other comprehensive income of gains and losses on foreign currency cash flow hedges are recorded in other-net on the Consolidated Statement of Income while the gains and losses on precious metal cash flow hedges are recorded in cost of sales on the Consolidated Statement of Income. See Note K to the Consolidated Financial Statements for additional details on cash flow hedges.

Reclassifications from accumulated other comprehensive income for pension and post employment benefits are included in the computation of the net periodic pension and post employment benefit expense. See Note C to the Consolidated Financial Statements for additional details on pension and post employment expenses.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

OVERVIEW

We are an integrated producer of high-performance advanced engineered materials used in a variety of electrical, electronic, thermal and structural applications. Our products are sold into numerous markets, including consumer electronics, industrial components and commercial aerospace, defense and science, energy, medical, automotive electronics, telecommunications infrastructure and appliance.

Sales in the first quarter 2014 of \$258.9 million were 13% lower than sales in the first quarter 2013. The majority of the decline was due to lower pass-through metal prices. Improvements in the consumer electronics, energy and appliance markets were more than offset by declines in other key markets, including defense, automotive electronics and medical.

The gross margin of \$45.5 million in the first quarter 2014 was 6% lower than the gross margin in the first quarter 2013 mainly as a result of lower shipment volumes.

Operating profit of \$11.1 million in the first quarter 2014 was 16% higher than the operating profit in the first quarter 2013 as the benefits from the plant consolidation program that was initiated in prior periods and other factors offset the negative impact of the lower volumes. Operating profit in the first quarter 2014 was also more than double the operating profit of \$5.4 million earned in the fourth quarter 2013.

The effective tax rate of 29.2% in the first quarter 2014 was higher than the first quarter 2013 mainly due to the research and experimentation credit not being extended for the current year by the U.S. Congress. Diluted earnings per share were \$0.35 in the first quarter 2014 versus \$0.33 in the first quarter 2013.

Debt increased \$28.1 million during the first quarter 2014 in order to support an increase in working capital, fund capital expenditures and other items. We repurchased \$1.5 million of common stock and paid \$1.6 million in dividends to shareholders during the first quarter 2014.

RESULTS OF OPERATIONS

(Millions, except per share data)	First Quarter Ended	
	Mar. 28, 2014	Mar. 29, 2013
Sales	\$258.9	\$299.2
Value-added sales	144.9	151.3
Operating profit	11.1	9.5
Income before income taxes	10.4	8.7
Net income	7.3	6.8
Diluted earnings per share	\$0.35	\$0.33

Sales of \$258.9 million in the first quarter 2014 were \$40.3 million, or 13%, lower than sales of \$299.2 million in the first quarter 2013, with differences in the metal price pass-through accounting for an estimated \$25.6 million (or 9%) of the decline and differences in the volumes and other factors accounting for the remaining \$14.6 million (or 4%) of the decline. Sales from Beryllium and Composites improved in the first quarter 2014 over the first quarter 2013 while sales from our other three reportable segments were lower.

Domestic sales declined approximately 16% in the first quarter 2014 from the first quarter 2013 and international sales declined 8%, as growth in sales to Asia was more than offset by lower sales to Europe and the rest of the world. International sales were 35% of total sales in the first quarter 2014 and 33% in the first quarter 2013.

The cost of gold, silver, platinum, palladium and copper are typically passed through to customers and therefore movements in the prices of these metals will affect sales but may not have a proportionate impact on margins. Internally, we analyze our business on a value-added sales basis. Value-added sales is a non-GAAP measure that deducts the cost of these pass-through

metals from sales and removes the potential distortion caused by differences in metal values sold. Value-added sales were \$144.9 million in the first quarter 2014, a 4% decline from value-added sales of \$151.3 million in the first quarter 2013. A reconciliation of sales to value-added sales is provided in a later section of this Management's Discussion and Analysis.

Beginning in the first quarter 2014, we revised our value-added sales by market reporting, segregating the defense and science market into two separate markets and reclassifying nuclear medical applications from the science market to the medical market. We also segregated the industrial components and commercial aerospace market into two separate markets. Prior year data has been revised accordingly to allow for proper comparisons.

Value-added sales to the consumer electronics market, our largest market accounting for approximately 29% of our value-added sales in the first quarter 2014, grew 5% in the first quarter 2014 over the first quarter 2013. Due to changes in technologies, downstream inventory positions and other factors, our shipments into the consumer electronics market in a given period are not necessarily driven by sales of the final product or by consumer demand in that period.

Value-added sales to the energy and appliance markets grew at double digit rates in the first quarter 2014 over the first quarter 2013. Value-added sales to the science market also improved in the first quarter 2014 over the same period in 2013.

Offsetting these improvements were lower value-added sales to a number of our key markets. Defense value-added sales were 25% lower in the first quarter 2014 than in the first quarter 2013 primarily due to the impact of government budget cuts on sales of optics. Sales of traditional beryllium products for defense applications were affected by the timing of program releases.

Value-added sales to the automotive market declined 15% in the first quarter 2014 as a result of softer market conditions and the impact of the severe weather. Value-added sales to the medical market were 10% lower in the first quarter 2014 than a strong first quarter 2013.

Gross margin was \$45.5 million, or 18% of sales, in the first quarter 2014 versus \$48.3 million, or 16% of sales, in the first quarter 2013. Gross margin was 31% of value-added sales in the first quarter 2014 and 32% of value-added sales in the first quarter 2013.

The main cause for the decline in gross margin dollars in the first quarter 2014 from the first quarter 2013 was the lower value-added sales. Gross margin was also negatively affected by the severe weather conditions during the first quarter 2014, which caused higher utility costs, lost time and other production scheduling inefficiencies. In addition, manufacturing overhead costs were higher in the first quarter 2014 than in the first quarter 2013.

Offsetting a portion of the impact of the above items was a net favorable change in product mix, partially due to shipments of various high margin products from the Beryllium and Composites segment. The output and associated operating costs from the beryllium pebble plant in Elmore, Ohio improved in the first quarter 2014 over the first quarter 2013. Yield improvements were also made at our Shanghai, China facility during the first quarter 2014.

The facility consolidation and product line rationalization program that was initiated in the fourth quarter 2012 was substantially completed in the fourth quarter 2013, although we spent \$0.6 million in the first quarter 2014 for retention compensation, clean-up costs and other miscellaneous items (with \$0.1 million recorded in cost of sales and \$0.5 million recorded in selling, general and administrative (SG&A) expenses). Facility closure costs totaled \$0.6 million in the first quarter 2013. Savings from this program in the first quarter 2014 relative to the first quarter 2013 totaled an estimated \$3.2 million, with \$1.8 million related to reduced cost of sales and \$1.4 million related to reduced

SG&A expenses.

SG&A expenses were \$31.3 million in the first quarter 2014 compared to \$32.8 million in the first quarter 2013. SG&A expenses were 12% of sales in the first quarter 2014 and 11% of sales in the first quarter 2013. SG&A expenses were also 22% of value-added sales in both the first quarter 2014 and 2013.

Retirement costs under the domestic defined benefit pension plan and the domestic retiree medical plan were \$1.6 million lower in the first quarter 2014 than the first quarter 2013 due to changes in the discount rates, actuarial differences, changes to the plan design and other factors. The lower expense was recorded mainly in SG&A expenses and cost of sales.

Stock-based compensation expense of \$1.4 million in the first quarter 2014 was \$0.2 million higher than in the first quarter 2013.

Selling expenses at various units increased in the first quarter 2014 over the first quarter 2013.

Corporate costs were approximately \$1.0 million higher in the first quarter 2014 than the first quarter 2013 as a result of higher legal and audit costs, health and safety costs, including a large one-time research study, the centralization of the purchasing function and other factors.

Research and development (R&D) expenses were \$2.8 million in the first quarter 2014 and \$3.6 million in the first quarter 2013 as spending levels declined from a relatively high level in the first quarter 2013. R&D expenses were approximately 1% of sales in both periods.

Other-net expense totaled \$0.4 million in the first quarter 2014 compared to \$2.5 million in the first quarter 2013. See Note G to the Consolidated Financial Statements for details of the major components within other-net expense.

As part of the plant consolidation program, we sold used equipment with limited future value to us at a gain of \$2.6 million in the first quarter 2014.

Differences in foreign currency exchange and translation gains and losses, including the impact of matured currency hedge contracts, accounted for an additional \$0.8 million of expense in the first quarter 2014.

Other-net expense also includes amortization expense, bad debt expense, cash discounts and other items.

Operating profit was \$11.1 million in the first quarter 2014, a 16% improvement over the operating profit of \$9.5 million in the first quarter 2013. The increased operating profit resulted from the cost savings from the plant consolidation program and the associated gain on the equipment sale, various operating improvements and other factors offset in part by the negative margin impact of the lower value-added sales. Operating profit was 4% of sales in the first quarter 2014 and 3% of sales in the first quarter 2013. Operating profit was also 8% of value-added sales in the first quarter 2014 and 6% of value-added sales in the first quarter 2013.

Interest expense - net was \$0.7 million in the first quarter 2014 versus \$0.8 million in the first quarter 2013 as the average outstanding debt level was lower in the first quarter 2014 than the first quarter 2013.

Income before income taxes and income tax expense for the first quarter 2014 and 2013 were as follows:

(Dollars in millions)	First Quarter Ended			
	Mar. 28, 2014	Mar. 29, 2013		
Income before income taxes	\$10.4	\$8.7		
Income tax expense	3.0	1.9		
Effective tax rate	29.2	% 22.0	%	%

The effects of percentage depletion, the production deduction, executive compensation, foreign source income and credits, state and local taxes, discrete events and other items were major factors for the difference between the effective and statutory rates in both the first quarter 2014 and 2013.

We recorded a net discrete tax benefit of \$0.6 million in the first quarter 2013, which primarily represented the estimated full value of the research and experimentation credit for 2012. This benefit was not included in our tax rate for 2012 as accounting regulations require us to record tax expense based upon the laws in effect as of the end of the year and the U.S. Congress did not extend the research and experimentation credit for 2012 until January 2013. While the credit was also effective for 2013, Congress had not extended the credit for 2014 as of the end of the first quarter 2014, so no associated benefit was recorded in the first quarter 2014.

Net income was \$7.3 million (or \$0.35 per share, diluted) in the first quarter 2014 compared to \$6.8 million (or \$0.33 per share, diluted) in the first quarter 2013.

Segment Results

Results by segment are depicted in Note E to the Consolidated Financial Statements. The All Other column in the segment reporting includes our parent company expenses, other corporate charges and the operating results of Materion Services Inc., a wholly owned subsidiary that provides administrative and financial oversight services to our other businesses on a cost-plus basis.

The operating loss within the All Other column in the first quarter 2014 was \$0.2 million higher than in the first quarter 2013, as the increases in incentive compensation expense and various corporate costs were only partially offset by higher charges out to the business units and other factors.

Advanced Material Technologies

(Millions)	First Quarter Ended	
	Mar. 28, 2014	Mar. 29, 2013
Sales	\$ 163.2	\$ 193.9
Value-added sales	65.6	68.7
Operating profit	7.6	3.4

Advanced Material Technologies manufactures precious, non-precious and specialty metal products, including vapor deposition targets, frame lid assemblies, clad and precious metal preforms, high temperature braze materials, ultra-fine wire, advanced chemicals, optics, performance coatings and microelectronic packages. These products are used in wireless, semiconductor, photonic, hybrid and other microelectronic applications within the consumer electronics and telecommunications infrastructure markets. Other key markets for these products include medical, defense and science, energy and industrial components. Advanced Material Technologies also has metal cleaning operations and in-house refineries that allow for the reclaim of precious metals from internally generated or customers' scrap. This segment has domestic facilities in New York, Connecticut, Wisconsin, New Mexico, Massachusetts and California and international facilities in Asia and Europe.

Sales from Advanced Material Technologies totaled \$163.2 million in the first quarter 2014, a decrease of \$30.7 million, or 16%, from sales of \$193.9 million in the first quarter 2013. Approximately \$24.4 million of this decline in sales was due to the pass-through of lower precious metal prices. While sales of the majority of our key product lines declined, sales of advanced chemical products grew in the first quarter 2014, as did sales of various products in Asia.

Value-added sales were \$65.6 million in the first quarter 2014 compared to \$68.7 million in the first quarter 2013.

Consumer electronics, which is Advanced Material Technologies' largest market accounting for approximately 41% of the segment's value-added sales in the first quarter 2014, grew 6% in the first quarter 2014 over the first quarter 2013. This growth was largely due to shipments of optics from our Shanghai, China operations, as a result of product and market development efforts, and higher shipments of phosphors for LED applications from our Milwaukee, Wisconsin operations.

Value-added sales to the industrial components and commercial aerospace markets showed minor improvements in the first quarter 2014 over the first quarter 2013.

The growth in these markets, however, was more than offset by softness in other key markets for this segment.

Value-added sales to the defense market were down approximately 38% in the first quarter 2014 from the first quarter 2013. This decline was primarily due to lower shipments of optics as a result of government spending cut-backs and delays. Quote activity remained fairly solid, but the defense prime contractors have been reluctant to place orders given the budget uncertainties.

Value-added sales to the medical market, primarily precious metal-coated polymer films for blood glucose test strip applications, softened 12% in the first quarter 2014 from the high shipment levels in the first quarter 2013. The medical market accounted for approximately 19% of Advanced Material Technologies' value-added sales in the first

quarter 2014.

Value-added sales from refine and shield kit cleaning operations were also lower in the first quarter 2014 than in the first quarter 2013. Value-added sales to the energy market, primarily architectural glass and solar energy applications, were unchanged in the first quarter 2014 from the first quarter 2013.

Advanced Material Technologies generated a gross margin of \$23.2 million, or 14% of sales, in the first quarter 2014 compared to \$24.9 million, or 13% of sales, in the first quarter 2013. Gross margin was 35% of value-added sales in the first quarter 2014 and 36% of value-added sales in the first quarter 2013.

The lower value-added sales was a main cause for the decline in gross margin in the first quarter 2014. Margins generated by refining and shield kit cleaning operations were lower due to the impact of the lower market prices on the metal that we retain

16

as part of the standard pricing arrangements with our customers. Manufacturing overhead costs increased due to changes in production levels and other factors.

These negative factors on margins were partially offset by a favorable change in product mix in the first quarter 2014 as compared to the first quarter 2013. Margins also benefitted from yield improvements in the manufacture of various optic products, including products manufactured at our Shanghai facility.

The previously discussed \$1.8 million cost savings from the plant consolidation program flowed through this segment's gross margin.

Gross margin in the first quarter 2013 was negatively impacted by a physical inventory loss of \$2.3 million at our Albuquerque, New Mexico facility, while the physical inventory adjustment in the first quarter 2014 was immaterial. This margin benefit was largely offset by lower manufacturing and refining yields at our Buffalo, New York facility in the first quarter 2014 compared to the first quarter 2013.

Total SG&A, R&D and other-net expenses of \$15.6 million in the first quarter 2014 were \$6.0 million lower than the expense total of \$21.6 million in the first quarter 2013. Expenses declined from 11% of sales in the first quarter 2013 to 10% of sales in the first quarter 2014 and from 31% of value-added sales in the first quarter 2013 to 24% of value-added sales in the first quarter 2014.

The main causes for the lower SG&A expenses in the first quarter 2014 were the aforementioned estimated savings of \$1.4 million from the facility consolidation program and the \$2.6 million gain on sale of the equipment. R&D expenses were also lower in the first quarter 2014 than the first quarter 2013. The net exchange and translation gain was higher in the first quarter 2014 than the first quarter 2013. These benefits were partially offset by a slight increase in incentive compensation expense in the first quarter 2014.

Operating profit generated by Advanced Material Technologies totaled \$7.6 million in the first quarter 2014 and \$3.4 million in the first quarter 2013. The improvement in operating profit was mainly due to the savings from the facility consolidation program, including the gain on the sale of the equipment, and other factors offset in part by the reduced margin from the lower value-added sales.

Operating profit was 5% of sales in the first quarter 2014 and 2% of sales in the first quarter 2013. Operating profit was also 12% of value-added sales in the first quarter 2014 and 5% of value-added sales in the first quarter 2013.

Performance Alloys

(Millions)	First Quarter Ended	
	Mar. 28, 2014	Mar. 29, 2013
Sales	\$66.7	\$74.5
Value-added sales	54.6	59.2
Operating profit	3.5	7.2

Performance Alloys manufactures and sells three main product families:

Strip products, the largest of the product families, include thin gauge precision strip and thin diameter rod and wire. These copper and nickel alloys provide a combination of high conductivity, high reliability and formability for use as connectors, contacts, switches, relays and shielding. Major markets for strip products include consumer electronics, telecommunications infrastructure, automotive electronics, appliance and medical;

Bulk products are copper and nickel-based alloys manufactured in plate, rod, bar, tube and other customized forms that, depending upon the application, may provide superior strength, corrosion or wear resistance, thermal conductivity or lubricity. Applications for bulk products include oil and gas drilling components, bearings, bushings, welding rods, plastic mold tooling and undersea telecommunications housing equipment. Major markets for bulk products include industrial components and commercial aerospace, energy and telecommunications infrastructure; and,

Beryllium hydroxide is produced at our milling operations in Utah from our bertrandite mine and purchased beryl ore. The hydroxide is used primarily as a raw material input for strip and bulk products and, to a lesser extent, by the Beryllium and Composites segment. Sales of hydroxide are also made on a limited basis.

Strip and bulk products are manufactured at facilities in Ohio and Pennsylvania and are distributed internationally through a network of company-owned service centers and outside distributors and agents.

Performance Alloys' sales of \$66.7 million in the first quarter 2014 were 11% lower than sales of \$74.5 million in the first quarter 2013.

Total volumes shipped of strip and bulk products were 9% lower in the first quarter 2014 than the first quarter 2013. Bulk product shipments were down 12% in the first quarter 2014 and strip product shipments declined 7%. While total shipment volumes were lower, shipments of ToughMet® products, our non-beryllium containing bulk and strip alloy, increased 17% in the first quarter 2014 over the first quarter 2013. Copper pass-through prices were lower in the first quarter 2014 than the first quarter 2013 and accounted for approximately \$1.2 million of the \$7.8 million reduction in sales between quarters. Sales of beryllium hydroxide were also \$3.2 million lower in the first quarter 2014 than in the first quarter 2013 due to differences in the timing of shipment schedules between years; sales of beryllium hydroxide for the full year of 2014 are projected to be equal to or slightly higher than 2013.

Value-added sales from Performance Alloys were \$54.6 million in the first quarter 2014 compared to \$59.2 million in the first quarter 2013.

Value-added sales to the consumer electronics market, Performance Alloys' largest market, accounting for approximately 24% of the segment's value-added sales, increased 25% in the first quarter 2014 over the first quarter 2013. The improvement was due in part to shipments for camera stabilization applications within tablets.

Value-added sales to the energy market, primarily oil and gas applications, while down sequentially from the fourth quarter 2013, grew 12% in the first quarter 2014 over the first quarter 2013. The quantity of our products used per operating rig has grown.

Value-added sales to the appliance market, primarily strip products, also increased in the first quarter 2014 over a very weak first quarter 2013 due to application development and improved demand in European markets.

These improvements were more than offset by softer value-added sales to other key markets for Performance Alloys. Value-added sales to the automotive electronics market, which accounted for 17% of this segment's value-added sales in the first quarter 2014, were down 6% in the first quarter 2014 from the first quarter 2013 due to weaker market conditions and the severe winter weather; we anticipate demand to improve in future periods. Value-added sales to the industrial components market were softer partially due to lower mining activity while value-added sales to the telecommunications infrastructure market were lower as various undersea communication line projects have not yet been funded.

Value-added sales to the commercial aerospace market were relatively unchanged, as growth in value-added sales of ToughMet products was offset by softness in sales of other materials.

In the fourth quarter 2013, we announced a price increase effective January 1, 2014. This announcement may have affected customers' purchasing patterns in the fourth quarter 2013 and first quarter 2014.

Gross margin on Performance Alloys' sales was \$15.5 million in the first quarter 2014 compared to \$17.3 million in the first quarter 2013. Gross margin was 23% of sales in both quarters. Gross margin was 28% of value-added sales in

the first quarter 2014 and 29% of value-added sales in the first quarter 2013.

The \$1.8 million reduction in the gross margin in the first quarter 2014 from the first quarter 2013 was largely due to the lower value-added sales volumes. Yields and other manufacturing efficiencies in the Elmore strip mill, which had fallen off during 2013, improved by the end of the first quarter 2014. The Utah mill also operated more efficiently during the first quarter 2014 due to the campaigning of the production activities. Manufacturing overhead costs were 3% lower in the first quarter 2014 than in the first quarter 2013. The gross margin benefit of these improvements was partially offset by the impact of the severe weather on production scheduling, lost time and other costs.

Total SG&A, R&D and other-net expenses were \$12.0 million in the first quarter 2014 (18% of sales) compared to \$10.1 million (14% of sales) in the first quarter 2013. These expenses were 22% of value-added sales in the first quarter 2014 and 17% of value-added sales in the first quarter 2013.

The difference in foreign currency exchange gains and losses was the largest component of the increase in expenses. R&D expenses increased 36%, as we continued to increase our investment in new products and technologies. Selling expenses grew slightly in the first quarter 2014 over the first quarter 2014 while corporate charges were also higher in the first quarter 2014 than the first quarter 2013.

Performance Alloys generated an operating profit of \$3.5 million in the first quarter 2014 and \$7.2 million in the first quarter 2013. The fall-off in operating profit was due to the lower gross margin, as a result of the lower volumes and other factors, and the increase in expenses.

Operating profit was 5% of sales in the first quarter 2014 and 10% of sales in the first quarter 2013. Operating profit was also 6% of value-added sales in the first quarter 2014 and 12% of value-added sales in the first quarter 2013.

Beryllium and Composites

(Millions)	First Quarter Ended	
	Mar. 28, 2014	Mar. 29, 2013
Sales	\$ 15.5	\$ 12.3
Operating profit (loss)	1.1	(1.3)

Beryllium and Composites manufactures beryllium-based metals and metal matrix composites in rod, sheet, foil and a variety of customized forms. These materials are used in applications that require high stiffness and/or low density and they tend to be premium-priced due to their unique combination of properties. The acquisition of Aerospace Metal Composites Limited in the first quarter 2012 provides a complementary family of non-beryllium-based alloys and composites. This segment also manufactures beryllia ceramic products. Defense and science is the largest market for Beryllium and Composites, while other markets served include industrial components, commercial aerospace, medical, energy and telecommunications infrastructure. Products are also sold for acoustics, optical scanning and performance automotive applications. Manufacturing facilities for Beryllium and Composites are located in Ohio, California, Arizona and England.

Beryllium and Composites' sales were \$15.5 million in the first quarter 2014, a \$3.2 million increase from sales of \$12.3 million in the first quarter 2013. Beryllium and Composites does not directly pass through changes in the costs of its material sold, so under our definition, sales and value-added sales for this segment are the same.

Sales for science applications increased \$1.8 million in the first quarter 2014 over the first quarter 2013 mainly due to the shipment of a beam pipe for the Large Hadron Collider. We produce a beam pipe for this application approximately once every twelve to eighteen months. Sales to the medical market improved as a result of stronger shipments for nuclear medical applications, which is an emerging growth market for us, and higher shipments of our traditional x-ray window and ceramic laser tube products. Sales to the industrial components market grew 20% in the first quarter 2014 due to improving market conditions.

The growth in sales to these markets was partially offset by a 6% decline in sales to the defense market. The defense market is the largest market for Beryllium and Composites, accounting for 31% of the segment's sales. This slight decline in sales was primarily due to the timing of program releases as opposed to government spending cut backs.

The gross margin on Beryllium and Composites' sales was \$4.9 million in the first quarter 2014 compared to \$2.7 million in the first quarter 2013. Gross margin was 32% of sales in the first quarter 2014 and 22% of sales in the first quarter 2013. The higher sales was the main cause for the growth in the gross margin in the first quarter 2014 from the first quarter 2013. A favorable change in product mix also contributed to the improvement due to the shipments of various high margin generating products for defense and science applications. The material output from the beryllium pebble plant, which serves as the feedstock for manufacturing finished parts at the Elmore, Ohio site, was higher in the first quarter 2014 than the first quarter 2013 and the production cost per pound was lower. A portion of these margin benefits was offset by a 6% increase in manufacturing overhead costs in the first quarter 2014, which was partially due to the impact of the severe weather on plant operations.

SG&A, R&D and other-net expenses for Beryllium and Composites totaled \$3.8 million, or 25% of sales, in the first quarter 2014 and \$4.0 million, or 33% of sales, in the first quarter 2013. R&D costs were lower in the first quarter 2014 due to the high level of project work in the first quarter 2013. Incentive compensation expense was lower in 2014 as well. These decreases were partially offset by higher selling expenses, primarily manpower-related expenses and customer samples, and an increase in corporate charges.

Beryllium and Composites generated an operating profit of \$1.1 million, or 7% of sales in the first quarter 2014 compared to an operating loss of \$1.3 million in the first quarter 2013. The improvement was due to the gross margin impact from the higher volume, favorable mix and other factors and a slight reduction in expenses.

Technical Materials

(Millions)	First Quarter Ended	
	Mar. 28, 2014	Mar. 29, 2013
Sales	\$13.5	\$18.5
Value-added sales	9.2	11.1
Operating profit	0.2	1.4

Technical Materials' capabilities include clad inlay and overlay metals, precious and base metal electroplated systems, electron beam welded systems, contour profiled systems and solder-coated metal systems. These specialty strip metal products provide a variety of thermal, electrical or mechanical properties from a surface area or particular section of the material. Our cladding and plating capabilities allow for a precious metal or other base metal to be applied in continuous strip form only where it is needed, reducing the material cost to the customer as well as providing design flexibility and performance. Major applications for these products include connectors, contacts, power lead frames and semiconductors, while the largest markets are automotive electronics and consumer electronics. The energy and medical markets are smaller but offer further growth opportunities. Technical Materials' products are manufactured at our Rhode Island facility.

Sales from Technical Materials were \$13.5 million in the first quarter 2014, a 27% decrease from sales of \$18.5 million in the first quarter 2013. The sales decline was largely in inlay and plated products offset in part by slight growth in welded and milled products.

Value-added sales were \$9.2 million in the first quarter 2014 compared to \$11.1 million in the first quarter 2013.

Value-added sales to the consumer electronics market in the first quarter 2014 were down 47% from the first quarter 2013. This decline was due in part to the phase out of a disk drive application due to changes in technologies in 2013. Value-added sales to this market in the first quarter 2014 were in line with the value-added sales in the last two quarters of 2013.

Value-added sales to the automotive market were 24% lower in the first quarter 2014 than in the first quarter 2013 due to softer market conditions in the U.S. and Europe, as key customers worked down existing inventories.

Value-added sales to the energy market showed strong growth in the first quarter 2014 over the first quarter 2013 largely due to the development of new products.

Technical Materials' gross margin was \$2.0 million, or 15% of sales, in the first quarter 2014 versus \$3.6 million, or 19% of sales, in the first quarter 2013. Gross margin was also 22% of value-added sales in the first quarter 2014 and 32% of value-added sales in the first quarter 2013. The lower value-added sales was the primary cause for the decline in gross margin in the first quarter 2014. The gross margin was also lower as a result of a 3% increase in

manufacturing overhead costs in the first quarter 2014 from the first quarter 2013.

SG&A, R&D and other-net expenses were \$1.9 million, or 14% of sales, in the first quarter 2014 and \$2.1 million, or 12% of sales, in the first quarter 2013. These expenses were 20% of value-added sales in the first quarter 2014 and 19% of value-added sales in the first quarter 2013. The decline in expenses was largely due to lower incentive compensation as a result of the reduced profitability in the current year.

Operating profit from Technical Materials was \$0.2 million in the first quarter 2014 and \$1.4 million in the first quarter 2013. Operating profit was 1% of sales in the first quarter 2014 and 8% of sales in the first quarter 2013. Operating profit was also 2% of value-added sales in the first quarter 2014 and 13% of value-added sales in the first quarter 2013.

Value-Added Sales - Reconciliation of Non-GAAP Measure

A reconciliation of sales to value-added sales, a non-GAAP measure, for each reportable segment and for the Company in total for the first quarter 2014 and first quarter 2013 is as follows:

(Millions)	First Quarter Ended	
	Mar. 28, 2014	Mar. 29, 2013
Sales		
Advanced Material Technologies	\$ 163.2	\$ 193.9
Performance Alloys	66.7	74.5
Beryllium and Composites	15.5	12.3
Technical Materials	13.5	18.5
All Other	—	—
Total	\$ 258.9	\$ 299.2
Less: Pass-through Metal Cost		
Advanced Material Technologies	\$ 97.6	\$ 125.2
Performance Alloys	12.1	15.3
Beryllium and Composites	—	—
Technical Materials	4.3	7.4
All Other	—	—
Total	\$ 114.0	\$ 147.9
Value-added Sales		
Advanced Material Technologies	\$ 65.6	\$ 68.7
Performance Alloys	54.6	59.2
Beryllium and Composites	15.5	12.3
Technical Materials	9.2	11.1
All Other	—	—
Total	\$ 144.9	\$ 151.3

The cost of gold, silver, platinum, palladium and copper can be quite volatile. Our pricing policy is to directly pass the cost of these metals on to the customer in order to mitigate the impact of metal price volatility on our results from operations. Trends and comparisons of sales are affected by movements in the market prices of these metals, but changes in sales due to metal price movements may not have a proportionate impact on our profitability.

Internally, management reviews sales on a value-added basis. Value-added sales is a non-GAAP measure that deducts the value of the pass-through metals sold from sales. Value-added sales allows management to assess the impact of differences in sales between periods, segments or markets and analyze the resulting margins and profitability without the distortion of the movements in the pass-through metal values. The dollar amount of gross margin and operating profit is not affected by the value-added sales calculation. We sell other metals and materials that are not considered direct pass-throughs and their costs are not deducted from sales when calculating value-added sales.

Our sales are also affected by changes in the use of customer-supplied metal. When we manufacture a precious metal product, the customer may purchase metal from us or may elect to provide its own metal, in which case we process the metal on a toll basis and the metal value does not flow through sales or cost of sales. In either case, we generally earn our margin based upon our fabrication efforts. The relationship of that margin to sales can change depending upon whether the product was made from our metal or the customer's. The use of value-added sales removes the potential distortion in the comparison of sales caused by changes in the level of customer-supplied metal.

By presenting information on sales and value-added sales, it is our intention to allow users of our financial statements to review our sales with and without the impact of the pass-through metals.

LEGAL

Standards for exposure to beryllium are under review by the United States Occupational Safety and Health Administration (OSHA) and by other governmental and private standard-setting organizations. One result of these reviews will likely be more stringent worker safety standards. Some organizations, such as the California Occupational Health and Safety Administration and the American Conference of Governmental Industrial Hygienists, have adopted standards that are more stringent than the current standards of OSHA. The development, proposal or adoption of more stringent standards may affect the buying decisions by the users of beryllium-containing products. If the standards are made more stringent and/or our customers or other downstream users decide to reduce their use of beryllium-containing products, our results of operations, liquidity and financial condition could be materially adversely affected. The impact of this potential adverse effect would depend on the nature and extent of the changes to the standards, the cost and ability to meet the new standards, the extent of any reduction in customer use and other factors. The magnitude of this potential adverse effect cannot be estimated.

There were two chronic beryllium disease (CBD) cases outstanding against us as of the end of the first quarter 2014. Both cases were filed in a period prior to the first quarter 2014. A loss reserve of \$0.2 million was recorded on our Consolidated Balance Sheet as of the end of the first quarter 2014 for these two cases. No settlement payments were made and no other CBD cases were filed or dismissed during the first quarter 2014.

FINANCIAL POSITION

Net cash used in operations was \$23.2 million in the first quarter 2014, as the net increase in working capital items, primarily an increase in accounts receivable and inventory and a decrease in accounts payable and accrued items, more than offset net income and the impact of depreciation and amortization.

Cash was \$19.3 million as of the end of the first quarter 2014 compared to \$22.8 million as of year-end 2013.

Accounts receivable totaled \$121.5 million at the end of the first quarter 2014, an increase of \$8.5 million, or 8%, from the year-end 2013 balance of \$113.0 million.

The increase was mainly due to a slow down in the average collection period. The days sales outstanding (DSO), a measure of the average collection time, slowed from 36 days as of year-end 2012 to 42 days as of the end of the first quarter 2014. This DSO level is at the higher end of our historical range, but it is not unusual for our collection period to slow down in the first quarter of a given year. Approximately 45% of the increase in receivables in the first quarter 2014 was in our overseas operations, which tend to have slower collection periods than in the U.S.

We have a program to aggressively monitor the credit position of our customers and the condition of our accounts receivable aging. The bad debt expense in the first quarter 2014 was immaterial.

Inventories of \$227.0 million at the end of the first quarter 2014 were \$13.6 million, or 6%, higher than the inventory balance of \$213.4 million as of year-end 2013. The inventory turnover ratio, a measure of how effectively inventory is utilized, slowed down in the first quarter 2014 from year-end 2013.

A portion of this increase was in beryllium hydroxide inventory at our Utah operations as a result of the cyclical nature of our mining activities and the planned timing of extracting ore and the deployment of our mining resources.

Inventory also increased as a result of building buffers, the purchase of raw material input to support sales in future periods with long production times and other factors.

We use the last-in, first-out (LIFO) method for valuing a large portion of our domestic inventories. By so doing, the most recent cost of various raw materials, including gold, copper and nickel, is charged to cost of sales in the current period. The older, and often times lower, costs are used to value the inventory on hand. Therefore, current changes in the cost of raw materials subject to the LIFO valuation method have only a minimal impact on changes in the inventory carrying value.

Capital expenditures for the first quarter 2014 and 2013 are summarized as follows:

(Millions)	First Quarter Ended	
	Mar. 28, 2014	Mar. 29, 2013
Capital expenditures	\$6.1	\$5.8
Mine development	0.1	3.8
Total	\$6.2	\$9.6

The majority of the capital spending in the first quarter 2014 was on small discrete projects. Major projects included the upgrade to the strip rolling equipment at the Reading, Pennsylvania facility and a new chamber for optical filter processing at the Westford, Massachusetts facility. Capital spending also included a number of infrastructure and support projects, including R&D equipment, security systems and information technology projects. Additional capital spending on the beryllium facility at the Elmore plant site, which was initially constructed as part of a multi-year \$104.9 million Title III contract with the U.S. Department of Defense, was minor in the first quarter 2014.

Intangible assets totaled \$22.8 million as of the end of the first quarter 2014, a decline of \$1.5 million since year-end 2013 due to the current period amortization.

Other liabilities and accrued items were \$46.5 million at the end of the first quarter 2014, a decrease of \$8.4 million from year-end 2013. The payment of the 2013 annual incentive compensation to employees was the main cause of the decline in the first quarter 2014. Various other balances also moved due to business levels, seasonal factors or other causes.

Unearned revenue, which is a liability representing products invoiced to customers but not yet shipped, was \$1.9 million at the end of the first quarter 2014 compared to \$0.5 million as of December 31, 2013. Revenue and the associated margin will be recognized for these transactions when the goods ship, title passes and all other revenue recognition criteria are met. Invoicing in advance of the shipment, which is only done in certain circumstances, allows us to collect cash sooner than we would otherwise.

Other long-term liabilities were \$16.0 million at the end of the first quarter 2014 and \$16.5 million at year-end 2013 due to movements in the long-term compensation accrual balances and amortization of capital lease balances.

Unearned income was \$55.3 million at the end of the first quarter 2014 versus \$56.5 million as of year-end 2013. This balance represents the unamortized reimbursements from the government for equipment purchases for the new beryllium facility made under the Title III program. The reduction to unearned income in the first quarter 2014 was recorded against cost of sales on the Consolidated Statement of Income and offset the depreciation expense recorded on the underlying equipment. Depreciation and amortization expense on the Consolidated Statement of Cash Flows is depicted net of the corresponding reduction in unearned income. See Note I to the Consolidated Financial Statements.

The retirement and post-employment benefit liability totaled \$60.0 million at the end of the first quarter 2014 compared to \$80.3 million as of December 31, 2013. This balance represents the liability under our domestic defined benefit pension plan, the retiree medical plan and other retirement plans and post-employment obligations.

The liability for the retiree medical plan was reduced by \$14.0 million in the first quarter 2014 as a result of a change in the benefits offered to participants in the plan. See the discussion in "Liquidity" below.

The liability for the domestic defined benefit pension plan declined \$6.5 million in the first quarter 2014 as a result of contributions to the plan totaling \$7.8 million and an adjustment to other comprehensive income of \$1.1 million offset

in part by the quarterly expense of \$2.4 million.

The retirement and post-employment benefit liability was also affected by differences between the payments made under other plans, the quarterly expense for these plans and other factors.

Debt totaled \$92.9 million as of the end of the first quarter 2014, an increase of \$28.1 million from the year-end 2013 debt balance of \$64.8 million.

The increase in debt was used to fund the pension plan contribution, the payment of the 2013 incentive compensation to employees in the first quarter 2014, the growth in inventory, capital expenditures, the repurchase of our common stock, the dividend payment to shareholders and other items.

Outstanding short-term debt was \$41.8 million as of the end of the first quarter 2014, while long-term debt totaled \$51.1 million.

We were in compliance with all of our debt covenants as of the end of the first quarter 2014.

Shareholders' equity was \$478.9 million as of the end of the first quarter 2014 compared to \$463.3 million as of year-end 2013. Comprehensive income was \$17.3 million in the first quarter 2014. This increase was partially offset by the payment of dividends and the repurchase of our common stock. Equity was also affected by stock compensation expense, the exercise of stock options and other factors.

Prior Year Financial Position

Net cash used in operations was \$4.8 million in the first quarter 2013 as a decrease in accounts payable and accrued items (which was partially due to the payment of the 2012 incentive compensation to employees during the first quarter 2013) and the net movements in other working capital items more than offset net income and the effects of depreciation, amortization and stock compensation expense.

The accounts receivable balance of \$129.8 million at the end of the first quarter 2013 was \$3.3 million, or 3%, higher than the year-end 2012 balance mainly due to a slow down in the DSO from 37 days to 39 days. Inventories decreased \$4.8 million, or 21%, in the first quarter 2013, while the inventory turnover ratio was relatively unchanged.

Other liabilities and accrued items declined \$9.9 million in the first quarter 2013 largely due to the payment of the 2012 incentive compensation expense to employees during the period. The retirement and post-employment benefit balance was \$0.5 million lower at the end of the first quarter 2013 than year-end 2012 due to the contribution to the domestic defined pension benefit plan of \$1.7 million offset in part by the expense recorded for the various plans and other factors.

Capital expenditures totaled \$9.6 million, which included \$3.8 million of mine development costs in the first quarter 2013.

Outstanding debt was \$113.4 million at the end of the first quarter 2013, an increase of \$19.1 from year-end 2012. The increase in debt was used to fund the payment of the 2012 incentive compensation to employees that was paid in the first quarter 2013, growth in other working capital items, capital expenditures and the payment of dividends.

Cash balances totaled \$20.2 million at the end of the first quarter 2013, an increase of \$4.1 million since year-end 2012.

Off-balance Sheet Arrangements and Contractual Obligations

We maintain the majority of our precious metals and a portion of our copper that we use in production on a consignment basis in order to reduce our exposure to metal price movements and to reduce our working capital investment. The balance outstanding under these off-balance sheet consignment arrangements totaled \$279.9 million as of the end of the first quarter 2014 and \$262.0 million as of year-end 2013. The increase was due to a combination of higher metal prices at the end of the first quarter 2014 compared to year-end 2013 and an increase in the quantity of metal on hand (primarily gold).

We were in compliance with the covenants contained in our consignment agreements as of March 28, 2014.

While our borrowings under existing lines of credit increased during the first quarter 2014, we did not enter into any new loan agreements during the period. For additional information on our contractual obligations, please see page 40 of our Annual Report on Form 10-K for the year ended December 31, 2013.

Liquidity

We believe funds from operations plus the available borrowing capacity and the current cash balance are adequate to support operating requirements, capital expenditures, projected pension plan contributions, the payment of quarterly dividends, share repurchases, environmental remediation projects and strategic acquisitions.

Cash used in operations was \$23.2 million in the first quarter 2014 as the cash we generated was consumed by a net increase in working capital items. It is not unusual for us to consume cash in the first quarter of a given year. In each of the past ten years, we have consumed cash in the first quarter and then generated cash from operations over the balance of the year. This is partially due to the annual payment for the prior year's incentive compensation expense to employees that is made in the first quarter of the year.

In January 2014, our Board of Directors approved a plan to repurchase up to \$50.0 million of our common stock. The timing of share purchases, if any, will depend on several factors, including market and business conditions, our cash flow, debt levels and other investment opportunities. There is no minimum required purchase quantity for a given year and the purchases may be discontinued at any time. We purchased approximately 51,000 shares at a total cost of \$1.5 million in the first quarter 2014.

We paid dividends to our shareholders totaling \$1.6 million in the first quarter 2014, the eighth consecutive quarter that we have paid a dividend. We intend to pay a quarterly dividend on an ongoing basis, subject to a continuing strong capital structure and a determination that the dividend remains in the best interest of the shareholders.

In the first quarter 2014, we notified the participants in the domestic retiree medical plan that we are changing from a defined benefit plan to a defined contribution plan for the majority of the plan participants. Under the revised benefit structure, we will contribute a fixed amount of cash that the participant may use to purchase a medical policy best suited to his or her own needs on an open exchange. The revised structure is designed to lower costs for the Company and the participants. Based upon the actuarial calculations of the impact of this revision, we reduced the retiree medical liability \$14.0 million in the first quarter 2014 with the offset recorded as a credit to other comprehensive income within shareholders' equity. This \$14.0 million benefit from the reduction in the liability will be recorded in income ratably over the average remaining service life, or approximately 9.5 years. Our cash payouts under the plan are anticipated to be lower over time as well.

Our domestic defined benefit pension plan was underfunded as of the end of the first quarter 2014. Contributions to the plan are determined by a variety of factors, including the plan funded ratio, plan investment performance, discount rates, actuarial assumptions, plan amendments, our policies and objectives, the availability of cash and other factors. We anticipate making contributions of approximately \$19.0 million to the plan during 2014. Contributions in the first quarter 2014 totaled \$7.8 million, which included \$3.8 million that was originally scheduled for the fourth quarter 2013, but we were able to defer until the first quarter 2014. Contributions made over the remaining three quarters of 2014 will be funded with cash from operations or borrowings under existing lines of credit.

As a result of the increase in debt during the first quarter 2014, the total debt-to-debt-plus-equity ratio, a measure of balance sheet leverage, increased from an unusually low 12% as of year-end 2013 to 16% as of the end of the first quarter 2014. Prior to the fourth quarter 2013, the debt-to-debt-plus-equity ratio was at or above 16% for the previous 15 consecutive quarters.

The available and unused borrowing capacity under the existing lines of credit, which is subject to limitations set forth in the debt covenants, was \$167.5 million as of the end of the first quarter 2014. Our revolving line of credit matures in 2018. Mandatory long-term debt payments to be made in 2014 total \$0.6 million.

The available and unused capacity under the off-balance sheet consignment lines totaled \$139.3 million as of the end of the first quarter 2014.

We also had \$19.3 million of cash as of the end of the first quarter 2014.

25

CRITICAL ACCOUNTING POLICIES

For additional information regarding critical accounting policies, please refer to pages 43 to 46 of our Annual Report on Form 10-K for the year ended December 31, 2013. There have been no material changes in our critical accounting policies since the inclusion of this discussion in our Annual Report on Form 10-K.

OUTLOOK

While our value-added sales were relatively soft in the first quarter 2014, we remained well-positioned in our markets and we believe that our value-added sales should improve in the remaining quarters of 2014. Our order entry level on a value-added basis in the first quarter 2014 was higher than it was in the year-ago period. We were encouraged by the growth in consumer electronics value-added sales in the first quarter 2014. We believe that the weakness in the automotive market in the first quarter 2014 is temporary and demand should improve in subsequent quarters and that demand from the majority of our key markets should be stronger in the second quarter than it was in the first quarter.

The cost savings from our plant consolidation program should continue throughout 2014, although the gain on the sale of the equipment in the first quarter should be considered a one-time event.

Early in the second quarter, we reached a favorable agreement with our insurance provider that resulted in the payment of \$6.8 million to us in satisfaction of our theft claim associated with the precious metal inventory loss at our Albuquerque facility in the fourth quarter 2012. The impact of the settlement will be recorded in our financial statements in the second quarter 2014.

We consumed cash in the first quarter 2014 as working capital levels grew. Over the balance of the year, we will work towards improving our working capital utilization and reduce the level of our outstanding debt.

FORWARD-LOOKING STATEMENTS

Portions of the narrative set forth in this document that are not statements of historical or current facts are forward-looking statements, in particular, the outlook provided above. Our actual future performance may materially differ from that contemplated by the forward-looking statements as a result of a variety of factors. These factors include, in addition to those mentioned elsewhere herein:

• Actual sales, operating rates and margins for 2014;

• Our ability to strengthen our internal control over financial reporting and disclosure controls and procedures;

• The global economy;

• The impact of the U.S. Federal Government shutdowns and sequestrations;

The condition of the markets which we serve, whether defined geographically or by segment, with the major market segments being: consumer electronics, industrial components and commercial aerospace, defense and science, automotive electronics, medical, energy and telecommunications infrastructure;

• Changes in product mix and the financial condition of customers;

• Our success in developing and introducing new products and new product ramp-up rates;

• Our success in passing through the costs of raw materials to customers or otherwise mitigating fluctuating prices for those materials, including the impact of fluctuating prices on inventory values;

• Our success in integrating acquired businesses;

• The impact of the results of acquisitions on our ability to achieve fully the strategic and financial objectives related to these acquisitions;

• Our success in completing the announced facility consolidations and the product line rationalizations and achieving the expected benefits;

• Our success in implementing our strategic plans and the timely and successful completion and start-up of any capital projects, including the new primary beryllium facility in Elmore, Ohio;

• The availability of adequate lines of credit and the associated interest rates;

Other financial factors, including the cost and availability of raw materials (both base and precious metals), physical inventory valuations, metal financing fees, tax rates, exchange rates, pension costs and required cash contributions and other employee benefit costs, energy costs, regulatory compliance costs, the cost and availability of insurance, and the impact of the Company's stock price on the cost of incentive compensation plans;

• The uncertainties related to the impact of war, terrorist activities and acts of God;

• Changes in government regulatory requirements and the enactment of new legislation that impacts our obligations and operations;

• The conclusion of pending litigation matters in accordance with our expectation that there will be no material adverse effects; and

• The risk factors set forth in Part 1, Item 1A of our Annual Report on Form 10-K for the year ended December 31, 2013.

27

Item 3. Quantitative and Qualitative Disclosures about Market Risk

For information regarding market risks, please refer to pages 48 and 49 of our Annual Report on Form 10-K for the year ended December 31, 2013. There have been no material changes in our market risks since the inclusion of this discussion in our Annual Report on Form 10-K.

Item 4. Controls and Procedures

Changes in Internal Control Over Financial Reporting

As previously disclosed in Item 9A of our Form 10-K for the year ended December 31 2013, management concluded that there was a material weakness in internal control over financial reporting in the physical inventory count reconciliation process. Actions have been taken to remediate this material weakness. As new controls are still being developed and others have not been in place long enough to provide sufficient assurances to support the conclusion that the identified material weakness has been fully remediated, management concluded that, as of March 28, 2014, there was a material weakness in internal controls over financial reporting in the physical inventory count reconciliation process.

Evaluation of Disclosure Controls and Procedures

We carried out an evaluation under the supervision and with the participation of our management, including the chief executive officer and chief financial officer, of the effectiveness of the design and operation of our disclosure controls and procedures as of March 28, 2014 pursuant to Rule 13a-15(b) and 15d-15(b) under the Securities Act of 1934, as amended. Based upon that evaluation, our management, including our chief executive officer and chief financial officer, concluded that our disclosure controls were not effective as of March 28, 2014 due to the material weakness previously described.

There have been no changes in our internal control over financial reporting that occurred during the quarter ended March 28, 2014 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

PART II OTHER INFORMATION

Item 1.

Legal Proceedings

Our subsidiaries and our holding company are subject, from time to time, to a variety of civil and administrative proceedings arising out of our normal operations, including, without limitation, product liability claims, health, safety and environmental claims and employment-related actions. Among such proceedings are cases alleging that plaintiffs have contracted, or have been placed at risk of contracting, beryllium sensitization or chronic beryllium disease or other lung conditions as a result of exposure to beryllium (“beryllium cases”). The plaintiffs in beryllium cases seek recovery under negligence and various other legal theories and demand compensatory and often punitive damages, in many cases of an unspecified sum. Spouses of some plaintiffs claim loss of consortium.

Beryllium Claims

As of March 28, 2014, our subsidiary, Materion Brush Inc., was a defendant in two beryllium cases, as described more fully below.

The Company is one of two defendants in a case originally filed on September 25, 2012 in the Court of Common Pleas of Philadelphia County, Pennsylvania, titled Schwartz v. Accuratus Corporation et al., and subsequently moved to the United States District Court for the Eastern District of Pennsylvania (No. 12-6189). Plaintiff alleges that she contracted chronic beryllium disease from “take-home” exposures resulting from her husband’s employment at facilities at the Company and of codefendant Accuratus Corporation, and asserts claims for negligence and strict liability. She seeks compensatory and exemplary damages in unspecified amounts. Her husband claims a loss of consortium.

The Company is one of five defendants in a case filed on October 4, 2013 in the Superior Court of the State of Arizona, Maricopa County, titled Parmar et al. v. Dolphin, Inc. et al., CV 2013-012980. One plaintiff alleges that he contracted chronic beryllium disease from exposures that resulted from his employment at manufacturing facilities of Karsten Manufacturing Corporation (“Karsten”) in Arizona, and asserts claims for negligence, strict liability, and fraudulent concealment. His wife claims a loss of consortium. Another plaintiff alleges that he has been diagnosed with beryllium sensitization that resulted from his employment at Karsten, and asserts a claim for medical monitoring. Plaintiffs seek compensatory and punitive damages and/or medical monitoring in unspecified sums.

The Company has some insurance coverage, subject to an annual deductible.

Item 2.

Unregistered Sales of Equity Securities and Use of Proceeds

During the three months ended March 28, 2014, we repurchased 50,806 shares under our stock buyback program at an average price of \$28.82.

Period	Total Number of Shares Purchased	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Dollar Value that May Yet Be Purchased Under the Plans or Programs (1)
January 1 through January 31, 2014	41,165	\$28.11	41,165	\$48,841,295
February 1 through February 28, 2014	—	—	—	48,841,295
March 1 through March 28, 2014	9,641	31.83	9,641	48,534,086
Total	50,806	\$28.82	50,806	\$48,534,086

(1)

In January 2014, our Board of Directors approved a stock repurchase program for the repurchase of up to \$50,000,000 of our common stock. As of March 28, 2014, \$48,534,086 may yet be purchased under the program.

Item 4. Mine Safety Disclosures

Information concerning mine safety violations or other regulatory matters required by Section 1503(a) of the Dodd-Frank Wall Street Reform and Consumer Protection Act and Item 104 of Regulation S-K (17 CFR 229.104) is included in Exhibit 95 to this quarterly report on Form 10-Q.
