Certain comments made in the presentation may be characterized as forward looking under the Private Securities Litigation Reform Act of 1995. Those statements involve a number of factors that could cause actual results to differ materially. Additional information concerning these factors is contained in the Company's filings with the SEC. Copies are available from the SEC, from the IBM web site, or from IBM Investor Relations.

In an effort to provide additional and useful information regarding the company's results as determined by generally accepted accounting principles (GAAP), these and the other materials presented during this event will include certain additional non-GAAP information.

The rationale for management's use of this non-GAAP information, the reconciliation of that information to GAAP, and other related information is included in supplementary materials entitled Non-GAAP Supplementary Materials that are posted on the Company's investor relations web site at <http://www.ibm.com/investor/events/global0606/>. The Non-GAAP Supplementary Materials are also included as Attachment II to the Company's Form 8-K dated today.

Agenda

Day 1: Tuesday, June 6

Welcome and Strategic Overview	Sam Palmisano
Global Integration Challenges & Implications	Panel Discussion

Security and Privacy Services	\$ 18	15%
Site and Facilities Services	\$ 22	3%
Server Services	\$ 32	5%
Storage and Data Services	\$ 28	4%
Maint. and Technical Support Services	\$ 90	2%

Transformation Initiatives**Simplify the offerings portfolio****Leverage IBM product sales attach more IT Services****Partner with Systems & Technology and Software to offer IBM infrastructure solutions to clients****Implement a globally consistent delivery model to drive efficiencies**

Focus on high growth/core competency market segments

Slide1

Business Continuity & Resiliency Services

Market opportunity

BCRS market is growing at 7%, while IBM grew BCRS 14% in 2005

BCRS is a \$2B opportunity in 2006

Top of mind with clients across most countries

IBM Strength

IBM had 24% market share in 2005 and has vast experience in this market

IBM is transitioning from being a multi-country provider to being a global provider

We have a comprehensive portfolio – event-driven (e.g. floods), data-driven (e.g. risk management) and business-driven (e.g. compliance)

New service products include Contingency Planning Assessment Services

**Security & Privacy Services:
Managed Security Services**

Market opportunity

IT Security is \$18B opportunity in 2006, growing at 15% CAGR

Companies are spending on security (anywhere from 3-8% of their IT budget) without industry expertise or knowledge

Risk is great one security incident costs a company about \$14M, liability for phishing data could be in billions of dollars

Managed Security Services (outsourcing) is about 10% of IT security market, with 95-98% retention rate

IBM Strength

IBM can leverage our scale from our global security operations centers, while lowering our clients security risk

Experience from our SO base (manage security for 2/3 of our accounts)

With IBM Research created analytical tools and models to evaluate behaviors and trends

We scale to deliver security services cost effectively while lowering security risk to our clients

3,500 security consultants around the world

**Storage & Data Services:
Including Information Lifecycle Management**

Market opportunity

Storage & Data Services (managing client s information & storage environments) is an \$28B opportunity, growing over 4% annually

Information Lifecycle Management (one of our solutions in this area) is growing at 14% CAGR and is a \$6B opportunity growing twice the rate of storage services in general

IBM Strength

IBM s solutions include Information Lifecycle Management capabilities, data management & storage infrastructure

Gartner & Giga say IBM is a leader & the strongest infrastructure player in Enterprise Content Management

IBM award-winning technical platform

Complete IBM solution

Networking Services: IP Convergence

Market opportunity

Networking Services is a \$46B opportunity in 2006. Part of this opportunity is IP Convergence

Enterprises recognize the value of moving all of their voice and data networks onto a single network

40% of companies will have completed convergence by 2010

95% of large & midsize companies will have started convergence by 2010

As telephony becomes an application, enterprises must construct a plan to assess and then integrate communications and business applications to accelerate their business processes (Gartner)

IBM Strength

IBM's leadership in solutions & services (including SO), exceptional global reach for services delivery, and deep industry knowledge position us to succeed in this market

IBM has partnerships with industry leaders like Cisco, Avaya, Nortel, 3Com, Siemens, national & international telecom carriers

Recognized a leader by IDC in Network Consulting and Integration Services

Business Transformation Outsourcing

Key Long Term Strategies

Invest to grow our capabilities in F&A, HR, CRM, Procurement, and Supply Chain Management

Leverage BPO capability to deliver efficient, high-quality front and back office process operation

Exploit global delivery and process capabilities

Expand asset base to deliver SOA-enabled functionality in support of our services products

Summary

IBM Global Services will grow with or better than the industry over the long-term.

Our Strategic Outsourcing business has steady growth. We will continue to leverage our strong customer base.

ITS is well-positioned in our transformation.

We are aggressively targeting growth markets such as Business Continuity & Resiliency Services and Information Lifecycle Management.

BTO is an excellent growth opportunity and we expect to outgrow the market.

Our global capabilities will be the underpinnings of our success.

Certain comments made in the presentation may be characterized as forward looking under the Private Securities Litigation Reform Act of 1995. Those statements involve a number of factors that could cause actual results to differ materially. Additional information concerning these factors is contained in the Company's filings with the SEC. Copies are available from the SEC, from the IBM web site, or from IBM Investor Relations.

In an effort to provide additional and useful information regarding the company's results as determined by generally accepted accounting principles (GAAP), these and the other materials presented during this event will include certain additional non-GAAP information.

The rationale for management's use of this non-GAAP information, the reconciliation of that information to GAAP, and other related information is included in supplementary materials entitled Non-GAAP Supplementary Materials that are posted on the Company's investor relations web site at <http://www.ibm.com/investor/events/global0606/>. The Non-GAAP Supplementary Materials are also included as Attachment II to the Company's Form 8-K dated today.

Non-GAAP Supplementary Materials
June 7, 2006

Non-GAAP Supplementary Materials

In an effort to provide investors with additional information regarding the company's results as determined by generally accepted accounting principles (GAAP), the company also discussed the following non-GAAP information which management believes provides useful information to investors.

Constant Currency

Management refers to growth rates at constant currency or adjusting for currency so that the business results can be viewed without the impact of changing foreign currency exchange rates, thereby facilitating period-to-period comparisons of the Company's business performance. Generally, when the dollar either strengthens or weakens against other currencies, the growth at constant currency rates or adjusting for currency will be higher or lower than growth reported at actual exchange rates.

Non-GAAP Supplementary Materials

Non-recurring Items/Special Actions

Management has presented certain financial results excluding the effects of the following one-time items: (1) a 2Q 2005 gain on the sale of the company's PC business, (2) a 2Q 2005 gain related to a settlement agreement reached with Microsoft, (3) 2Q 2005 charges related to the company's restructuring initiatives, (4) a one-time 3Q 2005 tax charge for the repatriation of foreign earnings, (5) a 4Q 2005 one-time curtailment charge relating to changes to the company's U.S. defined benefit pension plans, (6) a one-time charge recorded in 3Q 2004 for the partial settlement of certain legal claims related to IBM's pension plan and (7) the operational performance of the company's divested PC business. Given the unique and non-recurring nature of these items, management believes that presenting certain financial information without these items is more representative of the company's operational performance and provides additional insight into, and clarifies the basis for, historical and/or future performance, which may be more useful for investors.

Additionally, the company has presented certain financial results excluding the effects of special actions in 1999, 2002 and 2005. Given the unique and non-recurring nature of these items (both gains and losses), management believes that presenting certain financial results without the effects of such actions is more representative of the company's operational performance and year-over-year dynamics.

Non-GAAP Supplementary Materials

Divested PC Business

On April 30, 2005, IBM sold its PC business. Management believes that it is important to investors to understand the financial results of the company adjusted for the impact of its divested PCD operations in order to show IBM's results on a comparable basis year-to-year, and to best present ongoing operational performance. Accordingly, management has presented certain financial results excluding the effects of the PC business.

Consistent with the company's management system, its reportable segments include transactions between segments that are intended to reflect an arm's-length transfer price and include intercompany profit. Management believes that a more appropriate measure of the financial impacts that the divestiture of the PC business has on IBM's consolidated financial results should exclude any revenues associated with internal sales and intercompany profits, which are eliminated in consolidation. Accordingly, the results of the PC business have been adjusted from the reported PC segment. The basis for these adjustments are to give effect to intercompany and certain allocated expenses and the adjusted results are intended to display the impact on the IBM consolidated results on a basis comparable to which the company operates post-PC divestiture which management believes is meaningful and useful to investors.

Non-GAAP Supplementary Materials

Management View of Cash Flow

Management includes a presentation of cash flows that excludes the effect of Global Financing Receivables and subtracts net capital investments from Net Cash from Operations. For a financing business, increasing receivables is the basis for growth. Receivables are viewed as an investment and an income-producing asset. Capital investments are necessary to grow and sustain the business. Therefore, management presents financing receivables as an investing activity, which currently has the effect of lowering cash from operations, and net capital investments as a reduction of Net cash from Operations. Management's view is that this presentation gives the investor the best perspective of cash available for new investment, in addition to our capital expenditures, or for distribution to shareholders.

Additionally, management has presented its view of cash flow excluding the effects of funding of its U.S. pension plans. Given the unique nature of such pension fundings and the complexity and volatility associated with the accounting and financial reporting for pension plans, management believes that presenting these financial items without such fundings is useful to investors in better understanding the company's business performance. The Company believes the magnitude of these impacts can affect investors' understanding of the Company's overall business performance. Management further believes that investors' understanding is enhanced when the year-to-year dynamics is rendered explicit in the discussion of the Company's financial results.

Non-GAAP Supplementary Materials

Stock-based Compensation

Additionally, certain financial results have been restated to reflect the company's adoption of expensing of stock-based compensation in 2005. However, given certain data limitations, selected financial results (gross margin, expense to revenue ratio and cash flows from operations) from 1995 - 2000 have been presented without the effects of equity compensation in those years.

Estimated PTI for Acquisitions

Management presents selected references of estimated pre-tax income (PTI) margin for acquired entities, with and without amortization expense of acquired intangible assets. Management believes that presenting such results without the non-cash amortization expense of acquired intangible assets is more representative of the acquired entity's operational performance and IBM's return on its investment, which may be more useful for investors.

Reconciliation of Gross Profit Margin (GPM) and Expense to Revenue Ratio (E:R), excluding Special Actions

	1999	2002	2004	2005
GPM, excluding effects of Special Actions	37.2%	36.6%	36.9%	40.1%
Effects of Special Actions	(0.2)			
GPM, as reported	37.0%	36.6%	36.9%	40.1%
E:R, excluding effects of Special Actions	26.4%	26.7%	25.5%	26.5%
Effects of Special Actions	(3.5)	2.7	0.4	0.2
E:R, as reported	22.9%	29.4%	25.9%	26.7%

The above serves to reconcile the Non-GAAP financial information on Slides 5 and 10 of Mark Loughridge's The IBM Model Presentation. See Slide 3 of this presentation for additional information on the use of these non-GAAP financial measures.

-

Reconciliation of 2005 Segment Revenue and Pre-Tax Income Mix, excluding Special Actions and PC's

	Hardware & Financing	Services	Software
