Edgar Filing: SOUTHWALL TECHNOLOGIES INC /DE/ - Form 10-K

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No T

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15 (d) of the Act. Yes No T

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No £

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K. T

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No T

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act. (Check One).

Large accelerated filer £

Accelerated filer £

Non-accelerated filer T

The approximate aggregate market value of the Common Stock held by non-affiliates of the registrant on July 3, 2006 (based upon the closing sales price of the Common Stock on the Over-the-Counter Bulletin Market on such date) was \$6.2 million. For purposes of this disclosure, Common Stock held by stockholders whose ownership exceeds five percent of the Common Stock outstanding as of July 3, 2006, and Common Stock held by officers and directors of the registrant has been excluded in that such persons may be deemed to be "affiliates" as that term is defined in the rules and regulations promulgated under the Securities Act of 1933, as amended. This determination is not necessarily conclusive.

The number of shares of the registrant's Common Stock outstanding on March 1, 2007 was 27,139,035

Table of Contents

As used in this report, the terms "we," "us," "our," "Southwall" and the "Company" mean Southwall Technologies Inc. and its subsidiaries, unless the context indicates another meaning. This report contains forward-looking statements as that term is defined in the Private Securities Litigation Reform Act of 1995 that are subject to a number of risks and uncertainties. All statements other than statements of historical facts are forward-looking statements. These statements are identified by terminology such as "may," "will," "could," "should," "expects," "plans," "intends," "seeks," "anticipates," "believes," "estimates," "potential," or "continue," or the negative of such terms or other comparable terminology, although not all forward-looking statements contain these identifying words. Forward-looking statements are only predictions and include, without limitation, statements relating to:

- our strategy, future operations and financial plans, including, without limitation, our plans to install and commercially produce products on new machines;
 - the continued trading of our common stock on the Over-the-Counter Bulletin Board Market;
 - future applications of thin film coating technologies and our development of new products;
- our expectations with respect to future grants, investment allowances and bank guarantees from the Saxony government;
 - our projected need for additional borrowings and future liquidity;
- statements about our ability to implement and maintain effective controls and procedures;
 - statements about the future size of markets;
 - pending and threatened litigation and its outcome;
 - our competition; and
 - our projected capital expenditures.

You should not place undue reliance on our forward-looking statements. Actual events or results may differ materially. In evaluating these statements, you should specifically consider various factors, including the risks outlined under "Risk Factors" below. These factors may cause our actual results to differ materially from any forward-looking statement. Although we believe the expectations reflected in our forward-looking statements are reasonable as of the date they are being made, we cannot guarantee our future results, levels of activity, performance, or achievements. Moreover, neither we nor any other person assumes responsibility for the future accuracy and completeness of these forward-looking statements.

XIR, XUV, Triangle Design, Superglass, Heat Mirror, California Series, Solis, ETCH-A-FLEX, and Southwall are registered trademarks of Southwall. V-KOOL is a registered trademark of V-Kool International Holdings Pte. Ltd. All other trade names and trademarks referred to in this prospectus are the property of their respective owners.

Table of Contents

PART I

ITEM 1. BUSINESS

Overview

We are a global developer, manufacturer and marketer of thin film coatings for the automotive glass, electronic display, architectural glass and window film markets. We have developed a variety of products that control sunlight in automotive glass, reduce light reflection, reduce potentially harmful electromagnetic emissions and improve image quality in electronic display products, and conserve energy via the application of our architectural and after-market window film products. Our products consist of transparent solar-control films for automotive glass; anti-reflective films for computer screens and reflective films for back-lighting in liquid crystal displays; transparent conductive films for use in touch screen and plasma panel displays; energy control films for architectural glass; and various other coatings.

We maintain a website with the address of www.southwall.com. We are not including the information contained on our website as a part of, or incorporating it by reference into, this Annual Report, on Form 10-K. We make available free of charge through our website our Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q and current reports on Form 8-K, and amendments to these reports, as soon as reasonably practicable after we electronically file such material with, or furnish such material to, the Securities and Exchange Commission. In addition, we intend to disclose on our website any amendments to, or waivers from, our code of business conduct and ethics that are required to be publicly disclosed pursuant to the rules of the Securities and Exchange Commission. You may read and copy any material that we file with the SEC at the SEC's Public Reference Room at 100 F Street, N.E., Washington, D.C. 20549. You may obtain information on the operation of the Public Reference Room by calling the SEC at 1-800-SEC-0330. The SEC also maintains an Internet site at <http://www.sec.gov> that contains reports, proxy and information statements, and other information regarding issuers, including Southwall, that file electronically with the SEC.

Industry Background

Large area, single layer, thin film coatings were developed in the early 1960s using vacuum evaporation, a less precise precursor to sputter coating. As a result of technological developments in the early 1970s, multi-layer coatings for large substrates became possible. Sputtering based on these developments is used today in a large number of applications in which high quality, uniform coatings need to be deposited on large surfaces or on many smaller surfaces simultaneously. Examples of sputter coating include the deposition of various metal and metal oxide layers on wafers in the semiconductor and hard disk industries, and optical coatings on transparent surfaces in the automotive glass, electronic display, and architectural markets.

Thin film coatings are used in a wide variety of applications to control the transmission and reflection of light and the flow of energy. Thin film coatings can modify the transmission, reflection and absorption of both visible and non-visible light, such as infrared and ultra-violet light, to enhance the performance and characteristics of the material.

Thin film process technologies

The three most common methods for commercially producing thin film coatings on glass and flexible substrates are:

Table of Contents

Wet coating. The wet coating process generally involves depositing a thin layer of material onto glass by a spin coating technique or onto a flexible substrate, or film, by a number of different methods. In the case of spin coating, which is sometimes used for computer display tubes, or CDTs, a small amount of liquid is placed at the center of a spinning CDT, forcing the liquid from the center towards the outside edge. Once a uniform thin layer of liquid is thus applied, the layer is bake-dried at a moderate temperature. In the case of film coating, a thin layer of liquid material is applied to the surface of plastic film and then dried by means of thermal or direct radiation. This process is generally less expensive than sputter coating, but generally yields coatings with lower quality optical and mechanical characteristics.

Direct coating onto glass substrates. Direct coating onto glass can be accomplished by sputtering and by pyrolytic means. Direct-to-glass sputtering is a mature, well-known process for applying thin film coatings to glass. This technology is commonly used to manufacture products that conserve energy in buildings. Pyrolytic coatings are formed directly on the glass as it is produced on a float line. The pyrolytic process uses the heat of the molten glass to make a single layer, metal oxide coating from a solution sprayed onto the glass. Because this technique produces only single layer coatings, the performance is limited.

Sputter coating onto flexible film substrates. The sputter coating process, which is the process we primarily employ, deposits a thin layer of materials, generally metals and metal oxides, onto the surface of a flexible substrate, usually polyester. The substrate can then be either laminated in or applied to glass or suspended between panes of glass. The substrate can be applied to both flat glass and curved glass, such as is used in automotive applications.

The thin film coating process begins with a clear base substrate that is typically glass or a flexible polyester film. When using a flexible film, a hard coat is sometimes applied to prevent undesired interactions between the materials to be deposited and the base substrate, as well as improve the mechanical properties of the coating. Various materials are then deposited in very thin layers on the substrate. The process of building up the various layers results in a "stack." The stack consists of layers of materials that produce the desired optical and performance effects. In some applications, primarily with flexible films, adhesive or protective layers may be applied to the substrate to improve the subsequent application of the product onto a rigid substrate, such as glass.

Our Markets

The primary markets for thin film coated substrates that we manufacture are the automotive glass, electronic display, architectural glass and window film markets. Advances in manufacturing processes coupled with improved thin film deposition technologies in the automotive glass and electronic display markets are reducing production costs, allowing thin film coated substrates to more cost-effectively address these markets.

Automotive glass products

The thin film coated substrates we sell in this market reflect infrared heat. These coatings allow carmakers to use more glass and increase energy efficiency by reducing the demand on a vehicle's air conditioning system, as well as improving thermal comfort in the vehicle. Thin film coated substrates in this market are sold primarily to original equipment manufacturers, or OEMs, that produce glass for sale to European manufacturers of new cars and trucks for worldwide distribution.

Table of Contents

Nearly all-automotive glass in the world uses some degree of tint or coloration to absorb light and solar energy, thus reducing solar transmission into the vehicle. This tint is usually created through the mixing of inorganic metals and metal oxides into the glass as the glass is produced. The cost of adding these materials is very low, but the solar control benefit is limited by the fact that solar energy is absorbed in the glass, causing the glass to heat up, which eventually increases the temperature inside the automobile.

Electronic display products

The thin film coated products we sell in this market primarily block electromagnetic emissions and infrared energy, and enhance the light output of certain displays. Our thin film coated substrates are used in liquid crystal displays, or LCDs and plasma display panels or PDPs, and in applications such as touch screens. Thin film coated substrates in this market are generally sold to OEMs, which apply the film to flat screens.

Architectural glass products

The thin film coated substrates we sell in this market are primarily used to control the transmission of heat through window glass, as well as to limit ultra-violet light damage. Window glass is a poor thermal barrier; thus, the primary source of heat build-up and loss in buildings is through the glass windows.

Window Film

The thin film coated substrates we sell in this market are similar to the films sold into the automotive and architectural glass markets. Differences include certain product characteristics that allow the architectural window film products to be sold in the aftermarket rather than through the OEMs. In addition, our automotive window film products are used for retrofit application to the inside surface of a vehicle window and are sold through resellers who install the film.

Technology

In a sputtering process, a solid target and a substrate are placed in a vacuum chamber. By adding a small amount of process gas, typically argon, to the chamber and negatively charging the target, the process gas is ionized and a plasma discharge is formed. The positively charged gas ions strike the solid target with enough force to eject atoms from its surface. The ejected target atoms condense on the substrate and a thin film coating is constructed atom by atom. By placing a magnet behind the target, the electrons in the ionized plasma are confined to a specific region on the target, enhancing the creation of ionized gas atoms and increasing the efficiency of the target atom ejection process. By using different targets as the substrate moves through the vacuum chamber, we can create a multi-layered coating, or stack.

If the process gas is inert, such as argon, the coating will have the same composition as the target material. As an example, many of our coatings have a layer of silver in the stack. However, by adding a reactive gas such as oxygen or nitrogen to the process, it is possible to create metal oxide or metal nitride coatings from a metal target.

The advantages of our sputtering process include the high density of the formed coatings and the high degree of uniformity control that we can achieve.

Table of Contents

We rely extensively upon trade secrets and know-how to develop and maintain our competitive position. We have 23 patents and 18 patent applications pending in the United States and 68 patents and more than 34 patent applications pending outside the United States that cover materials, processes, products and production equipment. Of our existing patents, three U.S. patents and eighteen international patents will expire in three years. We also seek to avoid disclosure of our know-how and trade secrets through a number of means, including requiring those persons with access to our proprietary information to execute nondisclosure agreements with us. We consider our proprietary technology, as well as its patent protection, to be an important factor in our business.

Products

The following table describes the markets into which we sell our products, the applications of our products, our product families, key features of our various products and representative customers.

MARKET	APPLICATION	FILM PRODUCTS	KEY FEATURES	REPRESENTATIVE CUSTOMERS
<i>Automotive glass</i>	Windscreens, side windows, and back windows	Infrared reflective (XIR 70 and XIR 75)	Transmits 70% or 75% visible light	Saint Gobain Sekurit
			Reflects 85% of infrared heat energy	Pilkington PLC AGC Automotive Americas Guardian Glass
<i>Electronic display</i>	Liquid crystal display (LCD) screens	Anti-reflective clear (ARC)	Clear anti-reflective product	Berliner Glass
	LCD reflector for lighting sources	Silver reflecting	95% Reflecting Light-weight mirror	Mitsui Chemicals
	Plasma display panels (PDP)	Infrared reflective (TCP)	Clear and Conductive Clear infrared blocking	Mitsui Chemicals
<i>Architectural glass</i>	New and retrofit residential and commercial windows and doors	Suspended Heat Mirror	Cool in summer	Kensington Windows
			Warm in winter	Zamil Glass
			UV blocking	Traco
			Noise reducing	
	Commercial buildings	Laminated (XIR)	Infrared reflecting UV blocking	Gulf Glass Industries Cristales Curvados

Table of Contents

Automotive glass products

Direct-to-glass sputtering for automotive windshields has not historically been well developed because of the need to bend the glass before it can be coated and then installed in an automobile. Coating flat glass and then bending it to match complex automobile designs is less difficult. Therefore, coating flat glass and then bending it is the method currently used by most windshield glass producers. Our sputter coated flexible substrates can be applied to windshields with different curvatures and incorporated into most in-line windshield production processes used by glass companies today.

Our XIR coated solar-control films are transparent, sputter-coated, polyester films used in laminated glass for automobiles. The films have a patented, transparent solar-control coating on one side and a proprietary adhesion-promotion layer on the other.

Our net revenues from sales of automotive glass products were \$13.4 million, \$19.6 million and \$20.6 million in 2006, 2005 and 2004, respectively.

Electronic display products

Our sputter coated substrates offer the high optical quality necessary for higher resolution electronic displays. Our substrates can be easily cut into different shapes and sizes, providing increased flexibility for our customers. In addition, our products can effectively reduce undesirable or potentially harmful emissions without affecting the resolution of the display.

Anti-reflective films. Our anti-reflective films minimize reflection of visible light while allowing high picture quality. Our anti-reflective clear, or ARC, films are clear and used in LCD and plasma display panel screens.

Silver reflecting films. Our silver reflecting film is a mirror-like product used as a reflector in LCD backlit screens and for mirrors in rear-projection TV systems.

Transparent conductors. XIR films are used in the plasma display panel markets to block near-infrared and electromagnetic radiation from the display. Our ALTAIR-M films are used in products such as touch panels, liquid crystal displays and electroluminescent displays where the circuit or conductive material must not obscure the screen. ALTAIR films are also used in electromagnetic interference shielding, infrared rejection and electrostatic discharge packaging applications.

Our net revenues from sales of electronic display products were \$10.8 million, \$14.0 million and \$20.6 million in 2006, 2005 and 2004, respectively.

Architectural glass products

Windows containing our Heat Mirror product have approximately two to five times the insulating capacity of conventional double-pane windows. They also provide high levels of solar shading while transmitting a high percentage of visible light. In addition, our products also offer ultra-violet protection and reduce noise and condensation build-up. Our products allow architectural glass manufacturers to improve insulation without adding numerous panes of glass that are impractical to lift and cannot be supported by a structure's frame. This drives the need for thin film inside the glass that is a high performance insulator at a fraction of the weight of the glass.

Table of Contents

Suspended Heat Mirror films. Our Heat Mirror films provide a variety of shading and insulating properties as well as ultra-violet damage protection. Windows are the primary areas of heat loss in winter and a major source of heat gain in summer. Heat Mirror films, which are sold in rolls to window manufacturers, are suspended in the airspace between sealed double-pane residential and commercial windows. We have developed proprietary film-mounting technology, which we license to window fabricators. There are more than 50 Heat Mirror licenses in approximately 20 countries. We currently offer 11 different Heat Mirror films for architectural applications.

Laminated films. Our thin film coated flexible substrates are laminated between panes of glass and perform similarly to our XIR solar control films for automobiles. This film is currently sold primarily to fabricators of laminated window glass for large commercial building applications such as airports, office buildings, and museums. We have sold more than 20 licenses for this architectural film product in approximately 15 countries.

Our net revenues from sales of architectural products were \$5.5 million, \$5.9 million and \$7.0 million in 2006, 2005 and 2004, respectively.

Window Film Products

Our Solis/V-KOOL and Huper Optik solar-control films for automotive glass and architectural glass aftermarket installation use our XIR and other patented coating technologies. These products are applied to existing windows and have a protective hard coat over the patented, transparent solar-control coating on one side and an adhesion layer on the other. Solis/V-KOOL and Huper Optik are sold through a worldwide distribution network of companies owned by or affiliated with V-Kool International.

Our net revenues from sales of window film products were \$10.5 million, \$15.1 million and \$9.4 million in 2006, 2005 and 2004, respectively.

Sales and Marketing

Distribution channels

We sell our automobile and electronic display products primarily to OEMs in North America, Europe, the Middle East and Asia, principally through our own direct sales force and sales representatives. Mitsui Chemicals is our licensee and distributor for certain of our electronic products, and has exclusive manufacturing and distribution rights for certain of our electronic products using our proprietary sputtering technology.

We supply our Heat Mirror architectural products to approximately 50 insulated glass and window fabricators and distributors worldwide. Our proprietary mounting technology is licensed to our customers, who use special equipment for the manufacture of Heat Mirror-equipped windows. Our field services organization assists customers in the manufacture of Heat Mirror-equipped windows. In North America, we also promote our Heat Mirror product line through approximately six regionally based architectural glass sales representatives.

We sell our Solis/V-KOOL and Huper Optik aftermarket products for the automotive glass and architectural markets through a worldwide distribution network of companies owned by or affiliated with V-Kool International.

Table of Contents

International revenues amounted to approximately 68%, 74% and 79% of our net revenues during 2006, 2005 and 2004, respectively. The principal foreign markets for our products in 2006 were Japan (\$10 million) and the Pacific Rim other than Japan (\$8 million).

Quality claims

We accept sales returns for quality claims on our products, which we believe are competitive for the markets in which those products are sold. The nature and extent of these quality claims depend on the product, the market, and in some cases the customer being served. We carry liability insurance. However, our insurance does not cover quality claims and there can be no assurance that our insurance will be sufficient to cover all product liability claims in the future or that the costs of this insurance or the related deductibles will not increase materially.

Customers

Our customers include many of the world's leading OEMs in the automotive glass and electronic display markets. Our customers in the OEM automotive glass market include Saint Gobain Sekurit, Pilkington PLC, and Asahi, who sell glass to automobile manufacturers including DaimlerChrysler, Renault, Audi, BMW, Volvo, Volkswagen and the PSA Group (which includes Peugeot and Citroen). Our supply agreement with Saint Gobain Sekurit expired on December 31, 2005. We entered into a new agreement with Saint Gobain Sekurit in March of 2006. The new agreement will expire on February 29, 2008. Our failure to produce the required amounts of products under the new agreement could result in price penalties on future sales under the agreements.

Our customers in the electronic display market include Mitsui Chemicals and a number of other small accounts. Sales to Mitsui represented 25% of our total sales in 2006.

In 2006, our customers in the architectural market included approximately 57 fabricators of insulated glass units and laminated glass for architectural applications.

Our aftermarket applied film in the automotive and architectural glass markets is sold pursuant to an exclusive worldwide license in our distribution agreement with V-Kool International. Under the Agreement, which is scheduled to expire in 2011, V-Kool International agreed to purchase a set amount of our products during the term of the agreement subject to volume and quality standards. Our failure to produce required amounts of product under the agreement will result in penalties under which we would be required to reimburse V-Kool International for the full cost of any product not timely delivered. For each year after 2004 through and including 2011, V-Kool International is required to purchase an amount of product equal to 110% of the amount of product it was required to purchase in the prior year. V-Kool International was obligated to purchase \$10.9 million of products in 2006. During 2006, V-Kool International purchased approximately \$9 million of product. The remaining balance was rescheduled to Q1 2007 by mutual agreement. V-Kool International is obligated to purchase at least \$11.9 million from us in 2007.

Table of Contents

A small number of customers have accounted for a substantial portion of our revenues. Our ten largest customers accounted for approximately 77%, 81% and 79% of our net sales in, 2006, 2005 and 2004, respectively. During 2006, Mitsui Chemicals, Saint Gobain Sekurit, V-Kool and Pilkington PLC accounted for 24.6%, 8.5%, 20.0% and 9.5%, respectively, of our net revenues. During 2005, Mitsui Chemicals, Saint Gobain Sekurit, V-Kool and Pilkington PLC accounted for 22.7%, 19.8%, 19.5% and 7.1%, respectively, of our net revenues. During 2004, Mitsui Chemicals, Saint Gobain Sekurit, Pilkington PLC and V-Kool accounted for 28.4%, 17.8%, 11.4% and 10.9%, respectively, of our net revenues. Because of our fixed costs, the loss of, or substantial reduction in orders from, one or more of these customers would have a material adverse effect on our profitability and cash flow. The timing and amount of sales to these customers depends on sales levels and shipping schedules for the OEM products into which our products are incorporated. We have no control over the shipping dates or volume of products shipped by our OEM customers, and we cannot be certain that they will continue to ship products that incorporate our products at current levels or at all. In addition, we rely on our OEM customers to timely inform us of opportunities to develop new products that serve end-user demands.

Research and Development

Our research and development activities are focused upon the development of new proprietary products, thin film materials science, and deposition process optimization and automation and applied engineering. Our research and development expenditures totaled \$6.8 million, \$5.1 million and \$3.2 million, or approximately 16.9%, 9.3% and 5.6% of total net revenues, in 2006, 2005 and 2004, respectively.

Historically, our research and development efforts have been driven by customer requests for the development of new applications for thin film coated substrates. To meet the future needs of our customers, we continually seek to improve the quality and functionality of our current products and enhance our core technology. For example, in 2002 we began shipping production quantities and sizes of an anti-reflective film specifically designed for the liquid crystal display and plasma display panel markets that maintain optical clarity while reducing the reflection of ambient light to improve image quality. In 2003, we developed a new conductive film to satisfy Class B infrared shielding requirements for plasma display panels. In 2004, the Class B film was sold in substantial quantities for the first time for use in PDP televisions sets. In 2005, we began development and sampling of a new class of films with improved performance that we believe will be beneficial across our product lines. We also initiated significant research and development into thin film technology that we anticipate will enable Southwall to produce products for new applications and markets. We cannot guarantee that we will be successful in developing or marketing these applications or that our films will continue to meet the demanding requirements of the changing technology.

Although our production systems are built by outside vendors, we work closely with our vendors on the detailed implementation of the production machine designs. Our experience with designing production systems is critical for the proper construction of these machines. Once a new machine is installed and accepted by us, our engineers are responsible for transitioning the system into commercial production to help ensure stable manufacturing yields.

In 2005, we invested in additional engineering resources to support our increased focus on new products and technologies.

Table of Contents**Manufacturing**

The table below provides information about our current production machines and the class of products that each was tooled to produce in 2006.

Machine Number	Location	Primary Markets For Current Production	Year Commercial Production Initiated	Estimated Annual Capacity (Millions of Sq. Ft.) ⁽¹⁾
PM 1 (2)	Palo Alto	Architectural	1980	none
PM 2	Palo Alto	Research and development	1982	6.0
PM 4A (2)	Palo Alto	Automotive, architectural, electronic display and window film	1991	12.0
PM 4B (2)	Palo Alto	Automotive, architectural, electronic display and window film	1991	12.0
PM 8	Dresden	Automotive, architectural, electronic display and window film	2000	16.0
PM 9	Dresden	Automotive, architectural, electronic display and window film	2001	16.0
PM 10	Dresden	Automotive, architectural, electronic display and window film	2003	16.0

(1) Estimated annual capacity represents our estimated yields based on our historical experience and anticipated product mix. The amount of product for which we receive orders and which we actually produce in any year may be materially less than these estimates.

(2) These machines were scrapped and sold during the first half of 2006.

On January 19, 2006, we commenced restructuring actions with the goal of improving our cost structure for 2006 and beyond. These actions included the closure of our Palo Alto, California manufacturing facility in the first half of 2006. We scrapped and sold our production machines (PM 1, PM 4A and PM 4B) used for manufacturing in Palo Alto. We currently use PM2 for research and development in Palo Alto. We transferred our U.S. manufacturing operations to our site located near Dresden, Germany in the first half of 2006.

Our Dresden, Germany facility is ISO 9001/2000 certified.

Dresden, Germany facility

We own a production plant in Grossroehrsdorf, Germany, near the city of Dresden. The plant has three production machines and manufactured approximately 60% of our products during the first half of 2006 and 100% of our products during the second half of 2006. Southwall's Dresden plant is a supplier of automotive and architectural

energy management films used by glass companies to enhance the thermal performance of their products; it is also a supplier of electronic display and window film.

Environmental Matters

We use potentially hazardous materials in our research and manufacturing operations and have air and water emissions that require controls. As a result, we are subject to stringent federal, state and local regulations governing the storage, use and disposal of wastes. We contract with outside vendors to collect and dispose of waste at both of our production facilities in compliance with applicable environmental laws. In addition, we have in place procedures that we believe enable us to deal properly with the gasses emitted in our production process, and we have implemented a program to monitor our past and present compliance with environmental laws and regulations. Although we believe we are currently in material compliance with such laws and regulations, current or future laws and regulations may require us to make substantial expenditures for compliance with chemical exposure, waste treatment or disposal regulations.

Table of Contents

Suppliers and Subcontractors

We manufacture our products using materials procured from third-party suppliers. We obtain certain of these materials from limited sources. For example, the substrate we use in the manufacture of the Heat Mirror product is currently available from one main qualified source, Teijin Limited. The loss of our current source could adversely affect our ability to meet our scheduled product deliveries to customers. Alternative sources of supply are being pursued; however, it takes approximately 18 to 24 months for us to qualify a new supplier and we may not be able to successfully develop such sources.

We rely on third-party subcontractors to add properties, such as adhesives, to some of our products. There are only a limited number of qualified subcontractors that can provide some of the services we require. A significant increase in the price charged by one or more of our subcontractors could force us to raise prices on our products or lower our margins, which could have a material adverse effect on our operating results.

Furthermore, our production machines are large, complex and difficult to design and assemble. It can take up to a year from the time we order a machine until it is delivered. Following delivery, it can take us, with the assistance of the manufacturer, up to six additional months to test and prepare the machine for commercial production. There are a limited number of companies that are capable of manufacturing these machines to our specifications. Our inability in the future to have new production machines manufactured and prepared for commercial production in a timely manner would have a material adverse effect on our business.

Backlog

Our backlog primarily consists of purchase orders for products to be delivered within 90 days. As of February 28, 2007 and February 28, 2006, we had a backlog of orders able to be shipped over the next 12 months of approximately \$7.9 million and \$8.2 million, respectively. Some of these orders are not firm orders and are subject to cancellation. For these reasons, these orders may not be indicative of our future revenues.

Competition

The thin film coatings industry and the markets in which our customers compete experience rapid technological change, especially the electronic display market. Adoption by our competitors of new equipment or process technologies could adversely affect us. We have a number of present and potential competitors, including our customers, many of which have greater financial resources and greater selling, marketing and technical resources than we possess.

Automotive glass market. Large, worldwide glass laminators typically have divisions selling products to the commercial flat glass industry and provide solar control products in the automotive OEM market. We face technological competition from companies, such as PPG Industries, Pilkington PLC, Saint Gobain, Asahi, Guardian, and Glaverbel that have direct-to-glass sputtering capability. We may also be subject to future competition from companies that are able to infuse glass with solar control properties. We estimate that in 2006 our coated substrates were used in less than 1% of the total worldwide automotive OEM glass produced.

Table of Contents

Electronic display market. Competitors in the electronic display market include companies developing new coatings, such as wet coatings, for flat panel displays, as well as competitors who supply sputter coated films similar to those produced by us. Customers' selection of products is driven by quality, price and capacity. In addition, some of our current and potential customers are capable of creating products that compete with our products. We estimate that in 2006 our coated substrates were applied to less than 4% of the products in the worldwide, flat screen plasma display market.

Architectural glass market. Products that provide solar control and energy conservation have been available to this market for almost 25 years. Since our introduction of our Heat Mirror suspended film product in 1979, large glass producers, such as Guardian, PPG, Apogee Enterprises, Pilkington, Saint Gobain Sekurit, and Asahi, have produced their own direct-to-glass sputtered products that provide solar control and energy conservation similar to our Heat Mirror product. We estimate that in 2006 our coated substrates were used in less than 1% of the glass used worldwide in residential and commercial buildings.

Window film market. In the applied film segment of the market, companies such as 3M, Bekeart, CP Films (a subdivision of Solutia), and Lintec Inc. produce competitive solar control products that are widely accepted in the market.

Basis of competition

We believe we compete principally on the basis of:

- . Proprietary thin film sputtering process knowledge and control systems;
- . Our extensive thin film materials expertise and optical design capabilities;
- . Our state-of-the-art coating facility in a low-cost labor environment, which receives significant financial support from local and federal governments in Germany; and
- . Our ability to easily alter the format of our products, providing our customers with inventory versatility and higher production yields.

Employees

As of December 31, 2006, we had 140 full-time and one part-time employee, of whom 24 were engaged in engineering, 76 in manufacturing, 17 in sales and marketing, and 24 in general management, finance and administration. We are highly dependent upon the continuing services of certain technical and management personnel. None of our U.S. employees is represented by a labor union. To our knowledge, none of our German employees are represented by a labor union. We consider our employee relations to be good.

Table of Contents

ITEM 1A. RISK FACTORS

Financial Risks

Our working capital position, financial commitments and historical performance may raise doubt about our ability to have positive earnings in the future.

We incurred net losses in 2006 and 2004. These factors together with our working capital position and our significant debt service and other contractual obligations at December 31, 2006, may raise doubt about our ability to restore profitable operations, generate cash flow from operating activities and obtain additional financing. These and other factors related to our business during recent years, our past failure to comply with covenants in our financing agreements and our voluntary delisting from NASDAQ in March 2004 may make it difficult for us to secure the required additional borrowings on favorable terms or at all. We intend to seek additional borrowings or alternative sources of financing; however, difficulties in borrowing money or raising financing could have a material adverse effect on our operations, planned capital expenditures and ability to comply with the terms of government grants.

A few stockholders own a majority of our shares and will be able to exert control over us and our significant corporate decisions.

As a result of the consummation of the financing transactions in December 2003 and February 2004 with Needham & Company, Inc and its affiliates and Dolphin Direct Equity Partners, L.P., these shareholders at December 31, 2006 owned securities convertible into 59% of our outstanding common stock. As our largest stockholder and the guarantor of our line of credit, Needham could prevent us from seeking additional borrowings or alternative sources of financing that we require for future operations, could delay or prevent a change of control of our company, or otherwise control the company in ways that might have a material adverse effect on our company or our other shareholders.

Covenants or defaults under our credit and other loan agreements may prevent us from borrowing or force us to curtail our operations.

As of December 31, 2006, we had total outstanding obligations under our credit and other loan agreements of \$12.6 million. Our inability to make timely payments of interest or principal under these facilities could materially adversely affect our ability to borrow money under existing credit facilities, to secure additional borrowings or to function as a going concern. Our current credit facilities contain financial covenants that will require us to meet certain financial performance targets and operating covenants that limit our discretion with respect to business matters. Among other things, these covenants restrict our ability to borrow additional money, create liens or other encumbrances, and make certain payments including dividends and capital expenditures. Many of these loans contain provisions that permit the lender to declare the loans immediately due if there is a material adverse change in our business. These credit facilities also contain events of default that could require us to pay off indebtedness before its maturity. The restrictions imposed by these credit facilities or the failure of lenders to advance funds under these facilities could force us to curtail our operations or have a material adverse effect on our liquidity.

Table of Contents

Our ability to borrow is limited by the nature of our equipment and some of our accounts receivable.

Our equipment is custom designed for a special purpose. In addition, a large portion of our accounts receivable are from foreign sales, which are often more difficult to collect than domestic accounts receivable. As a result of the nature of our equipment and accounts receivable, lenders will generally allow us to borrow less against these items as collateral than they would for other types of equipment or domestic accounts receivable, or require us to provide additional credit enhancements.

If we default under our secured credit facilities and financing arrangements, the lenders could foreclose on the assets we have pledged to them requiring us to significantly curtail or even cease our operations.

In connection with our current borrowing facilities and financing arrangements, we have granted security interests in and liens on substantially all of our assets, including our production machines and our Dresden facility, to secure the loans. If our senior lenders were to repossess one or more of those machines, our ability to produce product would be materially impaired. Our revenues, gross margins and operating efficiency would also be materially adversely affected. Our obligations under our secured credit facilities contain cross-default and cross-acceleration provisions and provisions that allow the lenders to declare the loans immediately due if there is a material adverse change in our business. If we default under the credit facilities or financing arrangements the lenders could declare all of the funds borrowed there under, together with all accrued interest, immediately due and payable. If we are unable to repay such indebtedness, the lenders could foreclose on the pledged assets. If the lenders foreclose on our assets, we would be forced to significantly curtail or even cease our operations.

Our quarterly revenue and operating results are volatile and difficult to predict. If we fail to meet the expectations of public market analysts or investors, the market price of our common stock may decrease significantly.

Our quarterly revenue and operating results have varied significantly in the past and will likely vary significantly in the future. Our revenue and operating results may fall below the expectations of securities analysts or investors in future periods. Our failure to meet these expectations would likely adversely affect the market price of our common stock.

Our quarterly revenue and operating results may vary depending on a number of factors, including:

fluctuating customer demand, which is influenced by a number of factors, including market acceptance of our products and the products of our customers and end-users, changes in product mix, and the timing, cancellation or delay of customer orders and shipments;

- the timing of shipments of our products by us and by independent subcontractors to our customers;

manufacturing and operational difficulties that may arise due to, among other things, quality control, capacity utilization of our production machines, unscheduled equipment maintenance, and the hiring and training of additional staff;

- our ability to introduce new products on a timely basis; and

competition, including the introduction or announcement of new products by competitors, the adoption of competitive technologies by our customers, the addition of new production capacity by competitors and competitive pressures on prices of our products and those of our customers.

Table of Contents

We expect to be subject to increased foreign currency risk in our international operations.

In 2004, 2005 and 2006, approximately 31%, 32% and 30% of our revenues, respectively, were denominated in euros, primarily related to sales from our Dresden operation, including sales to one of our largest customers, a European automotive glass manufacturer. In addition, other customers may request to make payments in foreign currencies. Also, certain transactions with foreign suppliers are denominated in foreign currencies, primarily Japanese Yen.

A strengthening in the dollar relative to the currencies of those countries in which we do business would increase the prices of our products as stated in those currencies and could hurt our sales in those countries. Significant fluctuations in the exchange rates between the U.S. dollar and foreign currencies could cause us to lower our prices and thus reduce our profitability and cash flows. These fluctuations could also cause prospective customers to cancel or delay orders because of the increased relative cost of our products.

Our suppliers and subcontractors may impose more onerous payment terms on us.

As a result of our financial performance, our suppliers and creditors may impose more onerous payment terms on us, which may have a material adverse effect on our financial performance and our liquidity. For example, one of our subcontractors has required us to provide it with a security interest in all of our inventory held by it and has limited the amount of unpaid invoices we may have outstanding with it at any time.

Operational Risks

We depend on a small number of customers for nearly all of our revenues, and the loss of a large customer could materially adversely affect our revenues or operating results.

Our ten largest customers accounted for approximately 77%, 81% and 79%, of net revenues in 2006, 2005 and 2004, respectively. We expect to continue to derive a significant portion of our net sales from this relatively small number of customers. Accordingly, the loss of a large customer could materially hurt our business, and the deferral or loss of anticipated orders from a large customer or a small number of customers could materially reduce our revenue and operating results in any period. Some of our largest automotive glass customers have used a technology—direct-to-glass sputtering—as an alternative to our window films, which in 2003 resulted in a decrease in orders from these customers. The continued or expanded use of this technology by our automotive glass customers would have a material adverse effect on our results of operations and financial position.

We must continue to develop new products or enhance existing products on a timely basis to compete successfully in a rapidly changing marketplace.

Our future success depends upon our ability to introduce new products, improve existing products and processes to keep pace with technological and market developments, and to address the increasingly sophisticated and demanding needs of our customers, especially in the electronic display and automotive markets. Technological changes, process improvements, or operating improvements that could adversely affect us include:

Table of Contents

the development of competing technologies to our anti-reflective and silver reflector films for liquid crystal displays in the flat panel display industry;

- changes in the way coatings are applied to alternative substrates such as tri-acetate cellulose, or TAC;
- the development of new technologies that improve the manufacturing efficiency of our competitors;

the development of new materials that improve the performance of products that could compete with our products; and

improvements in the alternatives to the sputtering technology we use to produce our products, such as plasma enhanced chemical vapor deposition, or PECVD.

Our research and development efforts may not be successful in developing products in the time, or with the characteristics, necessary to meet customer needs. If we do not adapt to technological changes or processes or operating improvements, our competitive position, operations and prospects would be materially adversely affected.

Our ability to successfully identify suitable target companies and integrate acquired companies or technologies may affect our future growth.

A potential part of our continuing business strategy is to consider acquiring companies, products, and technologies that complement our current products, enhance our market coverage, technical capabilities or production capacity, or offer other growth opportunities. Our ability to successfully complete acquisitions requires that we identify suitable target companies, agree on acceptable terms, and obtain acquisition financing on acceptable terms. In connection with these acquisitions, we could incur debt, amortization expenses relating to identified intangibles, impairment charges relating to goodwill, or merger related charges, or could issue stock that would dilute our current shareholders' percentage of ownership. The success of any acquisitions will depend upon our ability to integrate acquired operations, retain and motivate acquired personnel, and increase the customer base of the combined businesses. We may not be able to accomplish all of these goals. Any future acquisitions would involve certain additional risks, including:

- difficulty integrating the purchased operations, technologies, or products;
- unanticipated costs, which would reduce our profitability;
- diversion of management's attention from our core business;
- potential entrance into markets in which we have limited or no prior experience; and
- potential loss of key employees, particularly those of the acquired business.

Table of Contents

If one of our customers is able to enforce a European automotive film patent, we may be restricted from using the methods present in such patent to produce some of our products.

On March 3, 2005, the European Patent Office allowed a European patent owned by Pilkington Automotive GmbH entitled "Method for producing a laminated glass pane free of optical obstruction caused by warping, use of a particular carrier film for the production of the laminated glass pane and carrier films particularly suitable for the method of use." This European patent covers certain laminated films and methods of using them, which may prevent us from producing certain films designed for the automotive markets. Our inability to use this technology could adversely affect our ability to provide a full range of products to the automotive film market. We participated in opposing the European patent and have appealed the European Patent Office decision.

Failure to meet the volume requirements of our customers may result in a loss of business or contractual penalties.

Our long-term competitive position will depend to a significant extent on our manufacturing capacity. The failure to have sufficient capacity, to fully utilize capacity when needed or to successfully integrate and manage additional capacity in the future could adversely affect our relationships with customers and cause customers to buy similar products from our competitors if we are unable to meet their needs. For example, we believe that we lost substantial potential architectural products sales in 2001 because we did not have the capacity to manufacture the required amounts of products. Also, our failure to produce required amounts of products under some of our contracts will result in price reductions on future sales under such contracts or penalties under which we would be required to reimburse the customer for the full cost of any product not delivered in a timely manner, either of which would reduce our gross margins.

We depend on our OEM customers for the sale of our products.

We sell a substantial portion of our products to a relatively small number of original equipment manufacturers, or OEMs. The timing and amount of sales to these customers ultimately depend on sales levels and shipping schedules for the OEM products into which our products are incorporated. We have no control over the volume of products shipped by our OEM customers or shipping dates, and we cannot be certain that our OEM customers will continue to ship products that incorporate our products at current levels or at all. We currently have long-term contracts with only two of our OEM customers. Failure of our OEM customers to achieve significant sales of products incorporating our products and fluctuations in the timing and volume of such sales could be harmful to our business. Failure of these customers to inform us of changes in their production needs in a timely manner could also hinder our ability to effectively manage our business.

We rely upon our OEM customers for information relating to the development of new products so that we are able to meet end-user demands.

We rely on our OEM customers to inform us of opportunities to develop new products that serve end-user demands. If our OEM customers do not present us with market opportunities early enough for us to develop products to meet end-user needs in a timely fashion, or if the OEMs fail to anticipate end-user needs at all, we may fail to develop new products or modify our existing products for the end-user markets for our products. In addition, if our OEM customers fail to accurately anticipate end-user demands, we may spend resources on products that are not commercially successful.

Table of Contents

We depend on a distributor for the sale of our after-market products.

We primarily use one independent distributor to sell our after-market products. We have a distribution agreement with V-Kool International Holdings Pte. Ltd., or V-Kool International, under which we granted an exclusive worldwide license to distribute our after-market applied film in the automotive and architectural glass markets. Failure of V-Kool International to achieve significant sales of products incorporating our products and fluctuations in the timing and volume of such sales could be harmful to our business. We believe that the success of our after-market products will continue to depend upon this distributor.

We face intense competition, which could affect our ability to increase our revenue, maintain our margins and increase our market share.

The market for each of our products is intensely competitive and we expect competition to increase in the future. Competitors vary in size and in the scope and breadth of the products they offer. We compete both with companies using technology similar to ours and companies using other technologies or developing improved technologies. Direct-to-glass sputtering represents the principal alternative technology to our sputter-coated film products. Direct-to-glass is a mature, well-known process for applying thin film coatings directly to glass, which is used by some of our current and potential customers to produce products that compete with our products. This technology is commonly used to manufacture products that conserve energy in buildings and automobiles. Many of our current and potential competitors have significantly greater financial, technical, marketing and other resources than we have. In addition, many of our competitors have well-established relationships with our current and potential customers and have extensive knowledge of our industry.

We are dependent on key suppliers of materials, which may prevent us from delivering product in a timely manner.

We manufacture all of our products using materials procured from third-party suppliers. We do not have long-term contracts with our third-party suppliers. Certain of the materials we require are obtained from a limited number of sources. Delays or reductions in product shipments could damage our relationships with customers. Further, a significant increase in the price of one or more of the materials used in our products could have a material adverse effect on our cost of goods sold and operating results.

We are dependent on a few qualified subcontractors to add properties to some of our products.

We rely on third-party subcontractors to add properties, such as adhesives, to some of our products. There are only a limited number of qualified subcontractors that can provide some of the services we require, and we do not have long-term contracts with any of those subcontractors. Qualifying alternative subcontractors could take a great deal of time or cause us to change product designs. The loss of a subcontractor could adversely affect our ability to meet our scheduled product deliveries to customers, which could damage our relationships with customers. If our subcontractors do not produce a quality product, our yield will decrease and our margins will be lower. Further, a significant increase in the price charged by one or more of our subcontractors could force us to raise prices on our products or lower our margins, which could have a material adverse effect on our operating results.

Table of Contents

We are dependent on key suppliers of production machines, which may prevent us from delivering an acceptable product on a timely basis and limit our capacity for revenue growth.

Our production machines are large, complex and difficult to manufacture. It can take up to a year from the time we order a machine until it is delivered. Following delivery, it can take us, with the assistance of the manufacturer, up to six additional months to test and prepare the machine for commercial production. There are a very limited number of companies that are capable of manufacturing these machines. Our inability in the future to have new production machines manufactured and prepared for commercial production in a timely manner would prevent us from delivering product on a timely basis and limit our capacity for revenue growth.

Fluctuations or slowdowns in the overall electronic display industry have and may continue to adversely affect our revenues.

Our business depends in part on sales by manufacturers of products that include electronic displays. The markets for electronic display products are highly cyclical and have experienced periods of oversupply resulting in significantly reduced demand for our products. For example, during 2006, we experienced a decrease of 23% from 2005 in our net revenues in the electronic display market primarily due to lower demand for our sputtered thin film filter products for Plasma Display Panel products due to increased competition, and we expect this trend to continue. In 2005, we stopped converting (cutting the film to the customer's specifications) one of our window film product models and agreed with our customers that they would complete this process. This resulted in higher revenues on our TX products as our customers bought more products to fill their distribution pipeline.

If we are unable to adequately protect our intellectual property, third parties may be able to duplicate our products or develop functionally equivalent or superior technology.

Our success depends in large part upon our proprietary technology. We rely on our know-how, as well as a combination of patent, trademark and trade secret protection, to establish and protect our intellectual property rights. Despite our efforts to protect our proprietary rights, unauthorized parties may attempt to copy aspects of our products or to obtain and use information that we regard as proprietary. Policing unauthorized use of our products is difficult. Our means of protecting our proprietary rights may not be adequate. In addition, the laws of some foreign countries do not protect our proprietary rights to as great an extent as do the laws of the United States. One of our U.S. patents relating to our architectural products, Heat Mirror, expired in 2006. Expiration of these patents or our failure to adequately protect our proprietary rights may allow third parties to duplicate our products or develop functionally equivalent or superior technology. In addition, our competitors may independently develop similar technology or design around our proprietary intellectual property.

Performance, reliability or quality problems with our products may cause our customers to reduce or cancel their orders.

We manufacture our products based on specific, technical requirements of each of our customers. We believe that future orders of our products will depend in part on our ability to maintain the performance, reliability and quality standards required by our customers. If our products have performance, reliability or quality problems, then we may experience:

- delays in collecting accounts receivable;
- higher manufacturing costs;
- additional warranty and service expenses; and

- reduced or cancelled orders.

Table of Contents

If we fail to recruit and retain a significant number of qualified technical personnel we may not be able to develop, enhance and introduce our products on a timely basis, and our business will be harmed.

We require the services of a substantial number of qualified technical personnel. Intense competition and aggressive recruiting, as well as a high-level of employee mobility characterize the market for skilled technical personnel. These characteristics make it particularly difficult for us to attract and retain the qualified technical personnel we require. We have experienced, and we expect to continue to experience, difficulty in hiring and retaining highly skilled employees with appropriate technical qualifications. It is especially difficult for us to recruit qualified personnel to move to the location of our Palo Alto, California offices because of the high-cost of living. If we are unable to recruit and retain a sufficient number of qualified technical employees, we may not be able to complete the development of, or enhance, our products in a timely manner. As a result, our business may be harmed and our operating results may suffer.

We may be unable to attract or retain the other highly skilled employees that are necessary for the success of our business.

In addition to our dependence on our technical personnel, our success also depends on our continuing ability to attract and retain other highly skilled employees. We depend on the continued services of our senior management, particularly Dr. R. Eugene Goodson, our President. We do not have formal employment contracts with any of our officers or key-person life insurance covering any officer or employee. Our officers have technical and industry knowledge that cannot easily be replaced. Competition for similar personnel in our industry where we operate is intense. We have experienced, and we expect to continue to experience, difficulty in hiring and retaining highly skilled employees with appropriate qualifications. If we do not succeed in attracting or retaining the necessary personnel, our business could be adversely affected.

Our business is susceptible to numerous risks associated with international operations.

Revenues from international sales amounted to approximately 68%, 74% and 79% of our net revenues during 2006, 2005 and 2004, respectively. To achieve acceptance in international markets, our products must be modified to handle a variety of factors specific to each international market as well as local regulations. We may also be subject to a number of other risks associated with international business activities. These risks include:

- unexpected changes in and the burdens and costs of compliance with a variety of foreign laws and regulatory requirements;
- potentially adverse tax consequences; and
- global economic turbulence and political instability.

If we fail to comply with environmental regulations, our operations could be suspended.

We use hazardous chemicals in producing our products and have air and water emissions that require controls. As a result, we are subject to a variety of local, state and federal governmental regulations relating to the storage, discharge, handling, emission, generation, manufacture and disposal of toxic or other hazardous substances used to manufacture our products, compliance with which is expensive. Our failure to comply with current or future regulations could result in the imposition of substantial fines on us, suspension of production, alteration of our manufacturing processes, increased costs or cessation of operations.

Table of Contents

We rely on our domestic sales representatives, without whom our architectural product sales may suffer.

We use independent sales representatives to promote our Heat Mirror products to architects in the United States. If some or all of our sales representatives experience financial difficulties, or otherwise become unable or unwilling to promote our products, our business could be harmed. These sales representatives could reduce or discontinue promotion of our products. They may not devote the resources necessary to provide effective marketing support to us. In addition, we depend upon the continued viability and financial resources of these representatives, many of which are small organizations with limited working capital. These representatives, in turn, depend substantially on general economic conditions and other factors affecting the markets for the products they promote. We believe that our success in this market will continue to depend upon these sales representatives.

We may experience unanticipated warranty or other claims with respect to our products, which may lead to extensive litigation costs and expenses.

In the ordinary course of business, we have periodically become engaged in litigation principally as a result of disputes with customers of our architectural products. We have settled some of these suits and others are pending. We may become engaged in similar or other lawsuits in the future. Some of our products that have been the basis for lawsuits against us could be the basis for future lawsuits. An adverse outcome in the defense of a warranty or other claim could subject us to significant liabilities to third parties. Any litigation, regardless of the outcome, could be costly and require significant time and attention of key members of our management and technical personnel.

We may face extensive damages or litigation costs if our insurance carriers seek to have us indemnify them for settlements of past and outstanding litigation.

Several of our insurance carriers have reserved their rights to seek indemnification from us for substantial amounts paid to plaintiffs by the insurance carriers as part of settlements of litigation relating to our architectural products. Our insurance carriers in a case in which the plaintiff alleged we were responsible for defects in window products manufactured by others have advised us that they intend to seek reimbursement for settlement and defense costs. Any claims, with or without merit, could require significant time and attention of key members of our management and result in costly litigation.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

24

Table of Contents

ITEM 2. PROPERTIES

Our administrative, sales, marketing, research and development facilities are located in two buildings totaling approximately 39,000 square feet in Palo Alto, California. One of the buildings is occupied under lease that will expire on June 30, 2011. The second building is occupied under a lease that will expire on December 31, 2007. We have an option to renew this lease for another year.

On January 19, 2006, we commenced restructuring actions to attempt to improve our cost structure for 2006 and beyond. These actions have included the closure of our Palo Alto, California manufacturing facility and a reduction in force at our Palo Alto site during the first half of 2006. We accrued \$1.5 million in the third quarter of 2006 as a leasehold asset retirement obligation in connection with this surrender plan. We expect to complete our surrender of this building to our landlord in the second quarter of 2007.

We have transferred our U.S. manufacturing operations to our European site located near Dresden, Germany in the first half of 2006, at which we own a 60,000 square foot building.

In January 2004, we had renegotiated a lease in Palo Alto, which required a final \$1.2 million payment in 2006. We made this payment in January 2006.

ITEM 3. LEGAL PROCEEDINGS

The Company was named as a defendant, along with Bostik, Inc., in an action captioned WASCO Products, Inc. v. Southwall Technologies, Inc. and Bostik, Inc., Civ. Action No. C 02 2926 SBA, which was filed in Federal District Court for the Northern District of California on June 18, 2002. We were served with the Complaint in this matter on July 1, 2002. The plaintiff filed the matter as a class action on behalf of all entities and individuals in the United States who manufactured and/or sold and warranted the service life of insulated glass units manufactured between 1989 and 1999, which contained Southwall Heat Mirror film and were sealed with a specific type of sealant manufactured by Bostik, Inc. The plaintiff alleged that the sealant provided by Bostik, Inc. was defective, resulting in elevated warranty replacement claims and costs. The plaintiff asserted claims against us for breach of an implied warranty of fitness, misrepresentation, fraudulent concealment, negligence, negligent interference with prospective economic advantage, breach of contract, unfair business practices and false or misleading business practices. The plaintiff sought recovery on behalf of the class of \$100 million for damages allegedly resulting from elevated warranty replacement claims, restitution, injunctive relief, and non-specific compensation for lost profits. By Order entered December 22, 2003, the Court dismissed all claims against us. The plaintiff has filed a notice of appeal to the Ninth Circuit Court of Appeals. On January 13, 2006, the Court of Appeals affirmed the lower court decision. On January 26, 2006, the plaintiff filed a petition for rehearing with the Ninth Circuit Court of Appeals. In March of 2006, the Ninth Circuit Court of Appeals denied the plaintiff's petition. A percentage of the Company's defense costs are being paid by its insurance carriers under reservation of rights. It is not possible to predict how Plaintiff's claims will be resolved, whether the Company will be found liable, or the nature and extent of Plaintiff's alleged damages.

Table of Contents

The insurance carriers in some of the litigation related to allege product failures and defects in window products manufactured by others in which we were a defendant in the past paid the defense and settlement costs related to such litigation. Those insurance carriers reserved their rights to recover a portion or all of such payments from us. As a result, those insurance carriers could seek from us up to an aggregate of \$12.9 million plus defense costs, although any such recovery would be restricted to claims that were not covered by our insurance policies. We intend to vigorously defend any attempts by these insurance carriers to seek reimbursement. We are not able to estimate the likelihood that these insurance carriers will seek to recover any such payments, the amount, if any, they might seek, or the outcome of such attempts.

In addition, we are involved in certain other legal actions arising in the ordinary course of business. We believe, however, that none of these actions, either individually or in the aggregate, will have a material adverse effect on our business, our consolidated financial position, results of operations or cash flows.

ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS

None.

Executive Officers of Registrant

The names, ages and positions of our current executive officers are as follows:

Name	Age	Position
R. Eugene Goodson	71	President, Chief Executive Officer and Director
Neil Bergstrom	57	Chief Technology Officer and Senior Vice President, Engineering
Dennis Capovilla	47	Senior Vice President, Sales and Marketing
Sylvia Kamenski	54	Vice President, Finance
Sicco W.T. Westra	56	Vice President, Business Development
Wolfgang Heinze	58	Vice President, General Manager Southwall Europe GmbH

Dr. R. Eugene Goodson joined Southwall's board of directors in April 2006 and in November 2006, Dr. Goodson became President and CEO. He has held leadership positions in industry, government and universities. Most recently, he served as the Chief Executive Officer and President of Williams Controls Inc., a manufacturer of electronic throttle controls, where he remains Chairman of the Board. Prior to Williams Controls, Dr. Goodson was Chairman and Chief Executive Officer of Oshkosh Truck Corporation, a developer and producer of heavy-duty on and off road trucks. After retiring from Oshkosh in 1998, he became an Adjunct Professor at the University of Michigan Business School, teaching operations management. Gene was also a director of the Executive Officer Association of American Industrial Partners, a private equity firm, from 1998 to 2005.

Neil Bergstrom joined Southwall in June 2005 as Chief Technology Officer and Senior Vice President, Engineering. His responsibilities include technology development, new product development, and thin film engineering. From 2004 to 2005, Dr. Bergstrom was Vice President of Engineering at Qualcomm MEMS Technologies, an LCD displays manufacturer, and from 2002 to 2004, held the same position at Iridigm Display, the iMoD displays manufacturer, prior to its acquisition by Qualcomm. In this strategic role, he successfully developed and transferred new MEMS display technology into existing LCD display manufacturing lines. Dr. Bergstrom joined Iridigm Display as Vice President of Business Development and successfully established key offshore manufacturing partnerships. From 1997 to 2002, Dr. Bergstrom served as Chief Technology Officer at Inviso, an international provider of high technology video/audio/data transport, signal management and display solutions for television broadcast, telecommunications, cable television and video production, and headed the technology development team and established ongoing

relationships with the company's key technology partners and suppliers. From 1992 to 1996, he was with Apple Computer where he managed the Advanced Display Department and initiated Apple's move into flat panel monitor products. Dr. Bergstrom began his career at Intel Corporation as a researcher and as Process Integration Manager for memory chip technologies in the Technology Development Division from 1982 until 1986. He holds a Ph.D. in Physics from U.C. Berkeley. On March 16, 2007, our CTO announced his intention to resign effective April 2, 2007.

Table of Contents

Dennis Capovilla joined Southwall in July 2003. Mr. Capovilla came to Southwall from Palm, Inc., a manufacturer of personal digital assistant devices, where he was the Vice President, Enterprise sales since 2002. From 1997 to 2002 he was with FATBRAIN, LLC, an e-commerce provider of books and information products, as the President and Chief Executive Officer from 2000-2002, the President and Chief Operating Officer from 1999 to 2000, and the VP of Sales and Business Development from 1997-1999. From 1993-1997, Mr. Capovilla was with Apple Computer, Inc., a computer manufacturer, as the Director, Americas Imaging Division and Worldwide Printer Supplies (1996-1997), Manager Printer Supplies Business unit (1995-1996) and as Worldwide Product Marketing Manager, Imaging Systems (1993-1995). Prior, Mr. Capovilla held various Sales and Marketing Management positions with Versatec, Inc. and Xerox Corporation. Dennis holds a B.S. in Marketing from the University of Santa Clara.

Sylvia Kamenski has been our Vice President of Finance since December 16, 2005. She joined Southwall in June of 2004 as Corporate Controller. Ms. Kamenski was appointed as Acting CFO in June 2005, and has played an expanded role in the management of the financial operations for the Company. Prior to joining Southwall from 2001 to 2003, Ms. Kamenski worked as Corporate Controller at Genus, Inc., a manufacturer of capital equipment and deposition processes for advanced semiconductor manufacturing, and from 1991 to 1997 in senior financial positions at Acuson Corporation, a manufacturer of high-performance systems that generate, display, archive and retrieve medical diagnostic ultrasound images. From 1984 until 1989, Ms. Kamenski worked for Raychem Corporation, a manufacturer of a variety of high-performance products for applications in electronics, telecommunications, transportation, infrastructure, and energy networks markets. Ms. Kamenski began her career in the audit and tax departments of Price Waterhouse, LLP (now PricewaterhouseCoopers), where she received her Certified Public Accountant certification. Ms. Kamenski holds a B.S. in Business Administration with a major in accounting from the University of San Francisco.

Sicco W. T. Westra has been Vice President, Business Development since June 2002. From August 1998 until June 2002, he was the Senior Vice President, Engineering and Chief Technical Officer of Southwall. From February 1998 until August 1998, he served as the Director of Global Production Management for Applied Materials, Inc., a provider of products and services to the semiconductor industry. From March 1994 to August 1998, he served as a Manager of Business Development for BOC Coating Technology, Inc., a manufacturer of sputter-coating equipment. Dr. Westra holds a PhD. from the University of Leiden in the Netherlands.

Wolfgang Heinze joined Southwall in January 1999 as Plant Manager of our Dresden factory. In December 2000, Mr. Heinze was promoted to the position of Vice President, General Manager Southwall Europe GmbH. Prior to joining Southwall; Mr. Heinze had been the Chief Executive Officer of FUBA Printed Circuits, GmbH, a manufacturer of printed circuit boards, from February 1991 to April 1998. Mr. Heinze has a MD of Commercial Science from the Technical University in Merseburg, Germany.

Table of Contents**PART II****ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES**

Our common stock is traded on the Over-the-Counter Bulletin Board Market under the symbol "SWTX.OB". From the completion of our initial public offering in June 1987 until March 26, 2004, our common stock was traded on the NASDAQ National Market System. Effective March 26, 2004, we voluntarily de-listed from NASDAQ and applied to begin trading on the Over-the-Counter Bulletin Board Market. As a result of our February 2004 financing transactions, in which we issued convertible promissory notes and warrants, we were no longer in compliance with certain NASDAQ listing requirements. We felt that a voluntary delisting from NASDAQ and move to the Over-the-Counter Bulletin Board Market would provide the best option to our stockholders by retaining liquidity in our common stock. Prices in the following table represent the high and low closing sales prices per share for our common stock as reported by Over-the-Counter Bulletin Board Market during the periods indicated.

	High	Low
2006		
1st Quarter	\$ 0.88	\$ 0.59
2nd Quarter	0.92	0.63
3rd Quarter	0.68	0.47
4th Quarter	0.63	0.37
2005		
1st Quarter	\$ 1.82	\$ 1.00
2nd Quarter	1.65	1.07
3rd Quarter	1.25	0.85
4th Quarter	0.89	0.52

On March 5, 2007, the last reported sale price for our common stock as reported on the Over-the-Counter Bulletin Board Market was \$0.65 per share. On such date, there were approximately 289 holders of record of our common stock, and we believe there were approximately 3,000 beneficial owners of our common stock.

Dividends

We have never declared or paid any cash dividends on our common stock, and we do not anticipate paying cash dividends in the foreseeable future. The Series A 10% Preferred Stock is entitled to cumulative dividends of 10% per year, payable at the discretion of our Board of Directors. We currently intend to retain future earnings, if any, to fund the expansion and growth of our business. Furthermore, payment of cash dividends on our common stock is prohibited without the consent of our Series A 10% Preferred stockholders. Per our credit agreement with Wells Fargo Bank, we are allowed to declare and pay up to \$600,000 in preferred stock dividends on a per annum basis, but are not permitted to pay any other dividends, including dividends on our common stock.

Table of Contents*Comparison of Cumulative Total Stockholder Return*

The following performance graph assumes an investment of \$100 on December 31, 2001 and compares the changes thereafter in the market price of our common stock with a broad market index, Composite Market Index, and an industry index, General Building Materials Index. We paid no dividends during the periods shown; the performance of the indexes is shown on a total return (dividend reinvestment) basis. The graph lines merely connect fiscal year-end dates and do not reflect fluctuations between those dates.

	12/01	12/02	12/03	12/04	12/05	12/06
Southwall Technologies Inc.	100.00	43.78	13.43	24.06	8.53	6.43
Composite Market Index	100.00	79.81	107.38	122.68	133.00	158.67
General Building Materials Index	100.00	98.94	133.69	166.92	181.98	227.77

Table of Contents**ITEM 6. SELECTED CONSOLIDATED FINANCIAL DATA**

The following selected consolidated financial data as of and for each of the five years ended December 31, 2006 are derived from our audited consolidated financial statements. This information should be read together with "Management's Discussion and Analysis of Financial Condition and Results of Operations" and the consolidated financial statements and related notes included elsewhere in this report.

Consolidated Statements of Operations Data:

Quarterly Financial Data:

The following table sets forth consolidated statements of operations data for the eight fiscal quarters ended December 31, 2006. This information has been derived from our unaudited condensed consolidated financial statements and has been prepared on the same basis as our audited consolidated financial statements contained in this report. It includes all adjustments, consisting only of normal recurring adjustments that we consider necessary for a fair presentation of such information when read in conjunction with our audited financial statements and related notes. Operating results for any quarter are not necessarily indicative of results for any future period. This information should be read together with "Management's Discussion and Analysis of Financial Condition and Results of Operations" and the consolidated financial statements and related notes included elsewhere in this report.

Our results of operations have varied significantly from quarter to quarter, and we expect them to continue to do so in the future. As a result of our high fixed costs, if revenues fall below our expectations, we may not be able to reduce our spending sufficiently to prevent a loss from operations. We anticipate that our sales will continue to have long sales cycles. Therefore, the timing of future customer contracts could be difficult to predict, making it very difficult to predict revenues in future quarters, and our operating results may continue to vary significantly.

Other factors that could affect our quarterly operating results include those described elsewhere in this report and the following:

- fluctuating customer demand, which is influenced by a number of factors, including market acceptance of our products and the products of our customers and end-users, changes in product mix, and the timing, cancellation or delay of customer orders and shipments;
- our ability to maintain sufficient liquidity;
- timing of shipments of our products by us and by independent subcontractors to our customers;
- manufacturing and operational difficulties that may arise due to, among other things, quality control, capacity utilization of our production machines, unscheduled equipment maintenance, and the hiring and training of additional staff;

- progress and outcome of litigation with which we are involved;
- announcement, consummation or integration by us of any acquired businesses, technologies or products;
- our ability to introduce new products on a timely basis;
- competition, including the introduction or announcement of new products by competitors, the adoption of competitive technologies by our customers, the addition of new production capacity by competitors and competitive pressures on prices of our products and those of our customers; and
- product returns and customer allowances stemming from product quality defects.

ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion and analysis of our financial condition and results of operations should be read in conjunction with Item 6, "Selected Consolidated Financial Data", our consolidated financial statements and notes thereto appearing elsewhere in this report and the risk factors set forth in Item 1A. This discussion and analysis contains forward-looking statements that involve risks and uncertainties. You should not place undue reliance on these forward-looking statements. Our actual results may differ materially from those anticipated in these forward-looking statements.

Overview

We are a global developer, manufacturer and marketer of thin film coatings on flexible substrates for the automotive glass, electronic display, architectural glass and window film markets. We have developed a variety of products that control sunlight in automotive glass, reduce light reflection, reduce electromagnetic radiation and improve image quality in electronic display products and conserve energy in architectural products. Our products consist of transparent solar-control films for automotive glass; anti-reflective films for computer screens, including flat panel displays, plasma displays; and transparent conductive films for use in touch screen and liquid crystal displays; energy control films for architectural glass; and various other coatings.

Our cash and cash equivalents decreased by \$1.1 million from \$6.6 million at December 31, 2005 to \$5.5 million at December 31, 2006. Cash provided by operating activities decreased by \$3.3 million from \$4.0 million in 2005 to \$0.7 million in 2006. The decrease in cash provided by operating activities during 2006 was primarily the result of net loss for the year of \$5.5 million, impairment recoveries from long-lived assets of \$0.2 million and an increase in other current and non-current assets of \$0.1 million partially offset by deferred income taxes of \$0.05 million, non-cash depreciation of \$2.4 million, a stock-based compensation charge of \$0.6 million, a decrease in accounts receivable of \$3.1 million, a decrease in inventories of \$0.3 million and an increase in accounts payable and accrued liabilities of \$0.2 million. Cash used in investing activities in 2006 was \$0.5 million compared to \$0.3 million provided by investing activities in 2005. The increase in cash used in investing activities from 2005 to 2006 was due to increased expenditures for property, plant and equipment and other assets partially offset by proceeds from sale of fixed assets. Cash used in financing activities decreased by \$0.1 million from \$1.6 million used in financing activities in 2005 to \$1.5 million used in financing activities in 2006.

Demand for our customers' products, which has a significant effect on our results, has changed rapidly from time to time in the past and may do so in the future. For example, as a result of changing demand in the personal computer industry from 1999 through 2003, our electronic display revenues declined from \$26.6 million in 2002 to \$19.0 million in 2003, increased to \$20.6 million in 2004, decreased to \$14.0 million in 2005 and to \$10.8 million in 2006. Similarly, revenues from our automotive segment were \$20.4 million, \$20.3 million, \$20.6 million, \$19.6 million and \$13.4 million in 2002, 2003, 2004, 2005 and 2006, respectively.

The decrease in 2006 was primarily due to a reduction in demand throughout the year by a major customer as a result of their large inventory build up at 2005 year end and the ongoing "de-contenting" trend in the automotive industry. De-contenting is a change by automotive manufacturers to make the part in which products are found as optional features rather than standard features to control their costs.

Table of Contents

Our research and development expenditures increased from \$5.1 million in 2005 to \$6.8 million in 2006. In 2005, we began development and sampling of a new class of films with improved performance that we believe will be beneficial across our product lines. We also initiated significant research and development into thin film technology that we anticipate will enable Southwall to produce products for new applications and markets. In 2005, we invested in additional engineering resources to support our increased focus on new products and technologies.

On January 19, 2006, we commenced restructuring actions to improve our cost structure for 2006 and beyond. These actions include the closure of our Palo Alto, California manufacturing facility and a reduction in force at our Palo Alto site during the first half of 2006. Also during the first half of 2006, we transferred our U.S. manufacturing operations to the European site located near Dresden, Germany. As a result of these restructuring actions, our gross margins increased from approximately 36% in the first half of 2006 to approximately 41% in the second half of 2006.

Financing and Related Transactions

Background.

During 2003, we experienced a significant decline in sales which led to a significant deterioration in our working capital position, which raised concerns about our ability to fund our operations and continue as a going concern in the short term and our ability to meet obligations coming due over the following few years.

At that time, management developed a restructuring plan that included:

- . Shutting down a majority of our domestic manufacturing and transferring that production to our Dresden, Germany facility;
- . Beginning a series of staggered layoffs;
- . Arranging new payment terms with all major creditors and vendors to extend or reduce our payment obligations;
- . Accelerating our cash collections;
- . Reducing our operating expenses and inventory levels; and
- . Minimizing our capital expenditures.

Table of Contents

We also began to solicit and receive proposals from potential investors and lenders. We evaluated a variety of public and private market alternatives to raise additional capital, as well as alternatives to restructure our upcoming payment obligations without raising additional capital. Our access to the traditional capital markets was, and continues to be, constrained, however, by a number of factors, including the risks described under "Risk Factors" in Item 1A. As a result, we concluded that a private equity investment was the most attractive alternative to continue as a going concern. On December 18, 2003, in order to raise cash to fund our operations and continue as a going concern, we entered into an investment agreement with Needham & Company, Inc., Needham Capital Partners II, L.P., Needham Capital Partners II (Bermuda), L.P., Needham Capital Partners III, L.P., Needham Capital Partners IIIA, L.P., Needham Capital Partners III (Bermuda), L.P., (together referred to as "Needham Company and its Affiliates") and Dolphin Direct Equity Partners, LP (collectively with Needham Company and its Affiliates, "the Investors"). On January 19, 2004, due to the structure of the transaction contemplated by the investment agreement, we did not have enough authorized and un-issued shares to satisfy the existing commitments had all outstanding warrants been exercised thereby triggering liability classification for all outstanding warrants. We measured and re-measured the fair value of the warrants at the issuance dates and each subsequent quarter end based on a methodology used by a third party until our stockholders approved the increase of the number of authorized shares of our common stock in the fourth quarter of 2004.

On February 20, 2004, we amended and restated the investment agreement and issued \$4.5 million of Secured Convertible Promissory Notes that were convertible into our Series A 10% Cumulative Convertible Preferred Stock, par value \$0.001 per share, or the Series A shares, at a conversion price of \$1.00 per share, together with warrants initially exercisable for 13,881,535 shares of our common stock at a nominal exercise price. Each of the Series A shares is convertible into common stock at any time at the option of the holder at a conversion price of \$1.00 per share, subject to adjustment, plus accumulated but unpaid dividends. The securities issued were exempt from registration under Regulation D of the Securities Act of 1933, as amended.

On October 5, 2004, our stockholders approved an amendment to our certificate of incorporation to increase the number of authorized shares of common stock from 20,000,000 to 50,000,000 and the total number of authorized shares of capital stock from 25,000,000 to 55,000,000. This provided us with sufficient number of available shares to cover all possible future conversions and exercises of all outstanding notes and warrants. We reclassified \$8.1 million of accrued warrant liability from other long term liabilities to additional paid in capital in the fourth quarter of 2004 in connection with the stockholder approval.

On November 4, 2004, Needham Company and its Affiliates received a total of 9,155,379 shares of our common stock upon the exercise of warrants. In exercising the warrants, the Needham entities elected to use a "cashless exercise option" in which 98,977 of the shares underlying the warrants were surrendered in lieu of paying in cash the exercise price. The warrants were originally exercisable for 9,254,356 shares of our common stock at an exercise price of \$0.01 per share of common stock. The value of the 98,977 shares of common stock surrendered was based upon the average trading price on November 3, 2004 of our common stock on the Over-the-Counter Bulletin Board Market.

On November 24, 2004, Dolphin Direct Equity Partners, LP exercised warrants to purchase a total of 4,627,179 shares of our common stock. Dolphin paid approximately \$46,000 in cash as the exercise price.

On December 31, 2004, Needham Company and its Affiliates and Dolphin Direct Equity Partners, LP elected to convert all outstanding principal of, and accrued but unpaid interest on, their Secured Convertible Promissory Notes into Series A shares. The Secured Convertible Promissory Notes by their terms were convertible at the option of the holders into Series A shares at a rate of one share for each \$1.00 of principal or interest converted. The aggregate principal amount of the Secured Convertible Promissory Notes was \$4,500,000 and interest accrued thereon as of the time of conversion was \$392,500. The aggregate number of shares of Series A shares issued as a result of the conversion was 4,892,500. In particular, Needham Company and its Affiliates received 3,261,667 shares and Dolphin

Direct Equity Partners, LP received 1,630,833 shares. In years 2006 and 2005, we accrued, in the aggregate, \$1.0 million of deemed dividend on preferred stock as a result of the conversion of our secured convertible promissory notes into shares of Series A preferred stock in December 2004.

Table of Contents

At December 31, 2006, Needham Company and Affiliates (together with the Needham Group Inc. and Needham Investment Management LLC) and Dolphin Direct Equity Partners, LP own 41.7% and 17.1%, respectively, of our outstanding common stock. In addition, if Needham Company and its Affiliates and Dolphin had converted their Series A shares into common stock at December 31, 2006, they would have owned 45.5% and 19.5%, respectively, of our outstanding common stock.

Material Terms of the Series A Shares

Our Series A share have the following terms:

.Dividends. Each of the Series A shares have a stated value of \$1.00 and are entitled to a cumulative dividend of 10% per year, payable at the discretion of the Board of Directors. Dividends on the Series A shares accrue daily commencing on the date of issuance and are deemed to accrue whether or not earned or declared and whether or not there are profits, surplus or other funds legally available for the payment of dividends. Accumulated dividends, when and if declared by the Board, will be paid in cash.

.Restrictions. So long as any Series A shares are outstanding, unless all accrued dividends on all Series A shares have been paid, we are prohibited from taking certain actions, including redeeming or purchasing shares of our common stock and paying dividends on our common stock.

.General Voting Rights. Except under certain circumstances or as otherwise provided by law, the holders of Series A shares have no voting rights. The approval of the holders of a majority of the Series A shares voting separately as a class will be required to effect certain corporate actions.

.Liquidation Preference. Upon a liquidation or dissolution of Southwall, the holders of Series A shares are entitled to be paid a liquidation preference out of assets legally available for distribution to our stockholders before any payment may be made to the holders of common stock. The liquidation preference is equal to the stated value of the Series A shares, which is \$1.00 per share, plus any accumulated but unpaid dividends. Mergers, the sale of all or substantially all of our assets, or the acquisition of Southwall by another entity and certain other similar transactions may be deemed to be liquidation events for these purposes.

.Conversion. Each of the Series A shares is convertible into common stock at any time at the option of the holder. Each of the Series A shares is convertible into a number of shares of common stock equal to the sum of its stated value plus any accumulated but unpaid dividends, divided by the conversion price of the Series A shares. The conversion price of the Series A shares is \$1.00 per share and is subject to adjustment in the event of any stock dividend, stock split, reverse stock split or combination affecting such shares. The Series A shares also have anti-dilution protection that adjusts the conversion price downwards using a weighted-average calculation in the event we issue certain additional securities at a price per share less than the closing price per share of our common stock on any stock exchange on which our common stock is listed. Each Series A share is initially convertible into one share of common stock. If the closing price of our common stock on any stock exchange on which our common stock is listed is \$4.00 or more per share (subject to appropriate adjustment if a stock split, reverse split or similar transaction is affected) for 30 consecutive days, all outstanding Series A shares shall automatically be converted.

.Redemption. The Series A shares are not redeemable.

Table of Contents*Agreements with Major Creditors*

Judd Properties, L.P. In January 2004, we reached an agreement with Judd Properties, L.P., or Judd, to modify our obligations under the lease for our executive offices. We agreed to a payment schedule that extended our obligations and provides us with options to extend the lease. We further agreed to issue a warrant issuable for 4% of our capital stock on a fully diluted basis to be held in an escrow account as security for our obligations in the event we fail to restore the property in accordance with the original lease terms upon our departure from the premises. Upon our departure, if we fail to restore the property in accordance with the original lease the warrant will be released to Judd. The warrant is exercisable for 1,410,426 shares of our common stock at a nominal exercise price. The other terms of the warrant mirror the terms of the warrants issued to the Investors. Judd will hold certain registration rights with respect to the warrant shares. Because we did not have available enough authorized shares of common stock to issue upon exercise of the warrant, we were required to issue a letter of credit in the amount of \$1.0 million to be held by Judd as security for our obligations until such time as the requisite number of authorized shares were approved by our stockholders on the condition that we are in compliance with the settlement agreement. The letter of credit is collateralized by \$1.0 million of our cash, which will not be released by the bank that issued the letter of credit until Judd releases the letter of credit. Following the approval of the charter amendment by our stockholders, Judd maintained that we were not fully in compliance with the settlement agreement and refused to release the letter of credit. Judd continues to hold the letter of credit pending the resolution of discussions regarding the restoration of the property. At December 31, 2006 and December 31, 2005, our accrued liability to Judd Properties L.P. was approximately \$1.5 million and \$1.2 million, respectively. On January 19, 2006, the Company announced its plans to vacate its current Palo Alto facility, which also serves as its headquarters and houses its manufacturing, research and development, sales and marketing and general and administrative functions. The Company relocated to another Palo Alto facility for these functions, except manufacturing. The Judd lease expired on January 31, 2006 and the Company has worked out a surrender plan with Judd Properties L.P. for these premises. On January 31, 2006, the Company paid its accrued liability of \$1.2 million to Judd and the Company is paying its monthly rent obligation to Judd. In connection with the surrender plan with Judd, \$1.5 million was accrued in July 2006 as a leasehold asset retirement obligation. The Company is in the process of restoring the building in accordance with the restoration plan.

Portfolio Financial Servicing Company, Bank of America and Lehman Brothers. On February 20, 2004, we entered into a settlement agreement with Portfolio Financial Services, Bank of America and Lehman Brothers, which extinguished a claim arising out of sale-leaseback agreements, which we entered into in connection with the acquisition of two of our production machines. As part of the settlement, we agreed to pay a total of \$2.0 million plus interest over a period of 6 years. The settlement required us to make an interest payment in 2004, and beginning in 2005, we will make quarterly principal and interest payments until 2010. We also agreed to return the production machines in question. If we fail to make the required payments, Portfolio Financial Services, Bank of America and Lehman Brothers may enter a confession of judgment against us in the amount of \$5.9 million. In 2006, we paid Portfolio Financial Services \$0.4 million in principal and interest payments. As of December 31, 2006 the principal amount outstanding is \$1.6 million with an additional amount of \$2.4 million in accrued interest.

Richard A. Christina and Diane L. Christina Trust. On December 1, 2003, we reached an agreement with the Richard A. Christina and Diane L. Christina Trust (the "Trust") to modify the lease agreement for a building located in Palo Alto, California. Under the terms of the agreement we agreed to the Trust's claim for damages in the amount of \$0.3 million. At December 31, 2006 and December 31, 2005, our accrued liability to the Trust was approximately \$0.08 million and \$0.2 million, respectively.

Table of Contents

Other Factors Affecting Our Financial Condition and Results of Operations

Restructuring activities. On January 19, 2006, we announced restructuring activities that included the closure of our Palo Alto, California manufacturing plant and a reduction in force of approximately 22% of our worldwide headcount. For 2006, the Company incurred restructuring charges of \$0.9 million.

Demand for our customers' products. We derive significant benefits from our relationships with a few large customers and suppliers. Our revenues and gross profit can increase or decrease rapidly reflecting underlying demand for the products of one or a small number of our customers. We may also be unable to replace a customer when a relationship ends or demand for our product declines as a result of evolution of our customers' products.

Our customers include Mitsui Chemicals, Pilkington PLC, Saint Gobain Sekurit and V-Kool International Holdings Pte. Ltd., or V-Kool International, which collectively accounted for approximately 60.1%, 66.0% and 65.9% of our total revenues in 2006, 2005 and 2004, respectively.

In September 2003, we entered into an amendment of the agreement with V-Kool International to materially reduce the quantity of product they are required to purchase from us. The adjustment was due to certain events beyond the control of the parties, including the Asian SARs epidemic, which affected the demand for our film products distributed by V-Kool International. The amendment provided that V-Kool International was required to purchase at least \$7.6 million of product in 2003 (rather than \$13.25 million as required in the original distribution agreement). In December 2003, the distribution agreement was further amended to set V-Kool International's 2004 minimum purchase commitments at \$9.0 million. Under the original distribution agreement, V-Kool International had been required to purchase at least \$15.25 million of product in 2004. For each year after 2004 through and including 2011, V-Kool International is required to purchase an amount of product equal to 110% of the amount of product it was required to purchase in the prior year. V-Kool International was obligated to purchase \$10.9 million of products in 2006. During 2006, V-Kool International purchased approximately \$9.0 million of product. The remaining balance was rescheduled to the first quarter of 2007 by mutual agreement. For the year ending December 31, 2007, V-Kool International is obligated to purchase \$11.9 million of our products.

Sales returns and allowances. Our gross margins and profitability have been adversely affected from time to time by product quality claims. From 2002 to 2006, our sales returns provision has averaged between 2.7% and 4.5% of gross revenues. During 2006, our sales returns provision has averaged approximately 3.5% of our gross revenues.

Impairment charge for long-lived assets. In June 2004, we had a recovery for long-lived assets as a result of selling a production machine from our Tempe manufacturing facility to a third party. The sale value was \$1.7 million, which included the price of the production machine, other miscellaneous hardware, training to be provided by us and operating software to run the machine. All of our obligations were completed and we recognized a gain of \$1.5 million, representing 90% of the sale value, less book value of the machine of \$0.1 million. Collection of the final 10% was contingent on installation of the machine by a third party or 120 days after shipment. We collected the final 10% in January 2005 and recognized the gain in the amount of \$0.2 million in the first quarter of 2005. In 2006, we incurred approximately \$0.3 million in impairment charges for long-lived assets and realized recoveries of approximately \$0.5 million.

Table of Contents**Critical Accounting Policies and Estimates**

The preparation of our consolidated financial statements requires us to make estimates and assumptions that affect the amounts of assets and liabilities we report, our disclosure of contingencies, and the amounts of revenue and expenses we report in our consolidated financial statements. If we used different judgments or estimates, there might be material differences in the amount and timing of revenues and expenses we report. See Note 1 of our Notes to Consolidated Financial Statements (Item 8) for details of our accounting policies. The critical accounting policies, judgment and estimates, which we believe have the most significant effect on our consolidated financial statements, are set forth below:

Revenue recognition;
 Stock-based compensation;
 Allowances for doubtful accounts and sales returns;
 Valuation of inventories;
 Assessment of the probability of the outcome of current litigation;
 Restructuring costs;
 Valuation of long-lived assets; and
 Accounting for income taxes.

Revenue recognition. We recognize revenue when persuasive evidence of an arrangement exists, delivery has occurred or services have been provided, the sale price is fixed or determinable, and collectibility is reasonably assured. Accordingly, we generally recognize revenue from product sales when the terms of sale transfer title and risk of loss, which occurs either upon shipment or upon receipt by customers. In connection with product sales, we make allowances for estimated returns and allowances. We adjust these allowances periodically to reflect our actual and anticipated experience. If any of these conditions to recognize revenue are not met, we defer revenue recognition. As of December 31, 2006, deferred revenues were \$0.3 million.

Stock-Based Compensation. Effective January 1, 2006, we adopted the fair value recognition provisions of SFAS No. 123 (revised 2004), "Share-Based Payment" ("SFAS 123R"), using the modified prospective transition method and therefore have not restated results for prior periods. Under this transition method, stock-based compensation expense in fiscal 2006 included stock-based compensation expense for all share-based payment awards granted prior to, but not yet vested as of January 1, 2006, based on the grant-date fair value estimated in accordance with the original provision of SFAS No. 123, "Accounting for Stock-Based Compensation" ("SFAS 123"). Stock-based compensation expense for all share-based payment awards granted after January 1, 2006, is based on the grant-date fair value estimated in accordance with the provisions of SFAS 123R. SFAS 123R requires companies to estimate the fair value of share-based payment awards on the date of grant using an option pricing model. We use the Black-Scholes option model. The value portion of the award that is ultimately expected to vest is recognized as compensation expense on a straight-line basis over the requisite service period of the award, which is generally the option vesting term of four years. Prior to the adoption of SFAS 123R, we recognized stock-based compensation expense in accordance with Accounting Principles Board ("APB") Opinion No. 25, "Accounting for Stock Issued to Employees" ("APB 25"). In March 2005, the Securities and Exchange Commission (the "SEC") issued Staff Accounting Bulletin No. 107 ("SAB 107") regarding the SEC's interpretation of SFAS 123R and the valuation of share-based payments for public companies. We have applied the provisions of SAB 107 in our adoption of SFAS 123R.

Table of Contents

In November 2005, the Financial Accounting Standards Board ("FASB") issued FASB Staff Position ("FSP") No. FAS 123R-3, "Transition Election Related To Accounting for Tax Effects of Share-Based Payment Awards" ("FSP 123R-3"). We have elected to adopt the alternative transition method provided in the FSP 123R-3 for calculating the tax effects of stock-based compensation pursuant to SFAS 123R. The alternative transition method includes simplified methods to establish the beginning balance of the additional paid-in capital pool ("APIC pool") related to the tax effects of employee stock-based compensation, and to determine the subsequent impact on the APIC pool and Consolidated Statements of Cash Flows of the tax effects of employee stock-based compensation awards that are outstanding upon adoption of SFAS 123R.

Allowances for doubtful accounts and sales returns. We establish allowances for doubtful accounts and sales returns for specifically identified, as well as anticipated, doubtful accounts and product quality claims based on credit profiles of our customers, current economic trends, contractual terms and conditions, and historical payment and sales returns experience. As of December 31, 2006, our consolidated balance sheet included allowances for doubtful accounts and sales returns of \$0.1 million and \$1.4 million, respectively. As of December 31, 2005, our consolidated balance sheet included allowances for doubtful accounts and sales returns of \$0.2 million and \$1.6 million, respectively. During 2006, 2005 and 2004, we recorded sales return costs of \$0.6 million, \$0.7 million and \$2.4 million, respectively. We incurred a credit to bad debt expense of \$0.1 million, \$0.1 million and \$0.5 million in 2006, 2005 and 2004, respectively. These credits are incurred as a result of our customers paying written-off receivable balances. If our actual bad debt and product quality costs differ from estimates or we adjust our estimates in future periods, our operating results, cash flows and financial position could be materially adversely affected.

Valuation of inventories. We state inventories at the lower of cost or market. We establish provisions for excess and obsolete inventories after periodic evaluation of historical sales, current economic trends, forecasted sales, predicted lifecycle and current inventory levels. During each of 2006 and 2005, we charged \$1.5 million against cost of sales for excess and obsolete inventories. In 2004, we charged \$2.1 million. If our actual experience of excess and obsolete inventories differs from estimates or we adjust our estimates, or changes occur in forecasted sales and expected product lifecycle, our operating results, cash flows and financial position could be materially adversely affected.

Assessment of the probability of the outcome of current litigation. In the ordinary course of business, we have periodically become engaged in litigation principally as a result of disputes with customers of our architectural products. We have relied upon insurance coverage to fund the defense of these actions and significant portions of the settlements that were reached. Based on our review of pending litigation, we record accruals for loss contingencies when we believe that a liability is likely of being incurred and we can reasonably estimate the amount of our share of the loss. In connection with recent settlements related to sales of architectural products, we have been advised by some of our insurers that they have reserved the right to proceed against us to recoup a portion or all of the settlements paid to plaintiffs.

Restructuring costs. We have recorded reserves/accruals for restructuring costs related to the restructuring of operations. The restructuring reserves include payments to employees for severance, termination fees associated with leases and other contracts, and other costs related to the closure of facilities. After the adoption of Statement of Financial Accounting Standards ("SFAS") No. 146, "Accounting for Costs Associated with Exit or Disposal Activities", ("SFAS 146") on January 1, 2003, the reserves have been recorded when management has approved a plan to restructure operations and a liability has been incurred rather than the date upon which management has approved and announced a plan. The restructuring reserves are based upon management estimates at the time they are recorded. These estimates can change depending upon changes in facts and circumstances subsequent to the date the original liability was recorded. Accruals for facility leases under which we ceased using the benefits conveyed to us under the lease may change if market conditions for subleases change or if we later negotiate a termination of the lease. Prior to the adoption of SFAS 146, restructuring reserves were recorded at the time we announced a plan to exit certain activities and were based on estimates of the costs and length of time to exit those activities. See Note 3 - Balance Sheet Detail

of the Notes to the Consolidated Financial Statements (Item 8) for a complete discussion of our restructuring actions and all related restructuring reserves by type as of December 31, 2006.

40

Table of Contents

Valuation of long-lived assets. We assess the valuation of long-lived assets if events or changes in circumstances indicate that the carrying value may not be recoverable. Factors that could trigger an impairment review include the following: (i) significant negative industry or economic trends; (ii) exiting an activity in conjunction with a restructuring of operations; (iii) current, historical or projected losses that demonstrate continuing losses associated with an asset; or (iv) a significant decline in our market capitalization, for an extended period of time, relative to net book value. When we determine that there is an indicator that the carrying value of long-lived assets may not be recoverable, we measure impairment based on estimates of future cash flows. These estimates include assumptions about future conditions such as future revenues, gross margins, operating expenses within our company, the fair values of certain assets based on appraisals, and industry trends.

Accounting for income taxes. In preparing our consolidated financial statements, we estimate our income taxes for each of the jurisdictions in which we operate, including Germany. We include differences between our deferred tax assets, such as net operating loss carry forwards, and deferred tax liabilities in our consolidated balance sheet. We must then assess the likelihood that our deferred tax assets will be recovered from future taxable income, and to the extent we believe that recovery is not likely, we must establish a valuation allowance. To the extent we establish a valuation allowance or increase this allowance in any period, we must include an expense within the tax provision in our statement of operations. To date, we have recorded a full allowance against our U.S. deferred tax assets. The valuation allowances were \$19.1 million, \$21.7 million and \$22.3 million at December 31, 2006, 2005 and 2004, respectively, which fully reserved our U.S. net deferred tax assets related to temporary differences, net operating loss carry forwards and other tax credits. Future income tax liabilities may be reduced to the extent permitted under federal and applicable state income tax laws, when the future tax benefit can be utilized by applying it against future income.

Significant management judgment is required in determining our provisions for income taxes, our deferred tax assets and liabilities and our future taxable income for purposes of assessing our ability to utilize any future tax benefit from our deferred tax assets. If actual results differ from these estimates or we adjust these estimates in future periods, our financial position, cash flows and results of operations could be materially affected.

Recently issued accounting pronouncements

In June 2006, the Financial Accounting Standards Board issued Interpretation No. 48, Accounting for Uncertainty in Income Taxes, an interpretation of FAS 109, Accounting for Income Taxes (FIN 48), to create a single model to address accounting for uncertainty in tax positions. FIN 48 clarifies the accounting for income taxes, by prescribing a minimum threshold a tax position is required to meet before being recognized in the financial statements. FIN 48 also provides guidance on derecognition, measurement, classification, interest and penalties, accounting in interim periods, disclosure and transition. FIN 48 is effective for fiscal years beginning after December 15, 2006. As required, we have adopted FIN 48 as of January 1, 2007. We do not expect that the adoption of FIN 48 will have a significant impact on our position and results of operations in the first quarter of 2007.

Table of Contents

In September 2006, the Financial Accounting Standards Board (“FASB”) issued Statement of Financial Accounting Standards No. 157, “Fair Value Measurements” (“SFAS 157”). This statement defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles and expands disclosures about fair value measurements. SFAS 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. We are currently evaluating the effect that the adoption of SFAS 157 will have on our financial position and results of operations.

On September 13, 2006, the Securities and Exchange Commission (“SEC”) issued Staff Accounting Bulletin No. 108 (“SAB 108”). The interpretations in SAB 108 were issued to address diversity in practice in quantifying financial statement misstatement and the potential under current practice for the build up of improper amounts on the balance sheet. We do not expect that the adoption of SAB 108 will have a significant impact on our position and results of operations in the first quarter of 2007.

In February 2007, the Financial Accounting Standards Board (“FASB”) issued Statement of Financial Accounting Standards No. 159, “The Fair Value Option for Financial Assets and Financial Liabilities - Including an amendment of FASB Statement No. 115” (“SFAS 159”). The objective of this statement is to improve financial reporting by providing entities with the opportunity to mitigate volatility in reported earnings caused by measuring related assets and liabilities differently without having to apply complex hedge accounting provisions. SFAS 159 is effective as of the beginning of an entity’s first fiscal year that begins after November 15, 2007. We are currently evaluating the effect that the adoption of SFAS 159 will have on our financial position and results of operations.

In addition, the Company is reviewing the Emerging Issues Task Force 06-3 (“EITF 06-3”) issued in June 2006, effective to financial reporting for interim and annual reporting periods beginning after December 15, 2006. This EITF applies to taxes assessed by various governmental authorities on many different types of transactions. These taxes range from sales taxes that are applied to a broad class of transactions involving a wide range of goods and services to excise taxes that are applied only to specific types of transactions or items. We are currently evaluating the effect that the adoption of EITF 06-3 will have on our financial position and results of operations.

Net revenues

Net revenues were \$40.2 million in 2006, \$54.8 million in 2005 and \$57.6 million in 2004. Net revenues for 2006 decreased by \$14.5 million, or 27% from 2005, and net revenues for 2005 decreased by \$2.8 million, or 5% from 2004. We expect our net revenues in 2007 to be at approximately the same level as in 2006.

Our net revenues in the automotive market decreased by \$6.2 million, or 32%, from \$19.6 million in 2005 to \$13.4 million in 2006. The decrease was primarily due to a reduction in demand throughout 2006 by a major customer as a result of their large inventory build up at 2005 year end and the ongoing “de-contenting” (a change by auto manufacturers to make the parts in which our products are found optional features rather than standard features to control their costs) trend in the automotive industry. Our net revenues in the automotive market remained relatively the same in 2005 and 2004 at \$19.6 million and \$20.6 million, respectively.

Our net revenues in the electronic display market decreased by \$3.2 million, or 23%, from \$14.0 million in 2005 to \$10.8 million in 2006. The decrease was primarily due to lower average selling prices for Plasma Display Panel products, resulting in price pressures on all suppliers in the market. Mitsui Chemicals is our primary customer in the electronic display market. Sales to Mitsui decreased \$2.6 million from \$12.4 million in 2005 to \$9.9 million in 2006. In addition, we phased out our unprofitable anti-reflective product lines and stopped selling these products in 2005, resulting in a decrease of \$0.8 million in net revenues in 2006. Also, we encountered yield issues with one electronic display product as we transferred the manufacture of this product from our Palo Alto facility to our German facility in the first half of 2006. Our net revenues in the electronic display market decreased by 32% or \$6.5 million in 2005

when compared to 2004 as a result of decreased sales to Mitsui Chemicals in the plasma display market and decreased sales to Mitsubishi as Mitsubishi ceased production of their 17-inch CRT monitor.

Table of Contents

Our net revenues in the architectural market decreased in 2006 to \$5.5 million from \$5.9 million in 2005. The \$0.4 million decrease was due to softness in the Asian market and a decrease in business from one of our largest accounts in Europe and the Middle East. Our net revenues in the architectural market decreased 15% or \$1.1 million in 2005 when compared to 2004 due to a decrease in sales from our customers in all regions.

Our net revenues in our window film market decreased 31% or \$4.7 million in 2006 when compared to 2005. In 2005, we stopped converting (cutting the film to the customer's specification) one of our window film product models and agreed with our customers that they would complete this process. This resulted in lower revenues on our TX products in 2006 and higher revenues in 2005 as our customers bought more products to fill their distribution pipelines in 2005. Our net revenues in our window film market increased 61% or \$5.7 million in 2005 when compared to 2004. We sell our window film products primarily to customers located in the Pacific Rim and the Middle East.

Cost of Sales

Cost of sales decreased 33.6% or \$12.5 million in 2006 from 2005. As a percent of sales, cost of sales was 61.5% in 2006 compared to 68% in 2005. Facility costs, depreciation expense and labor costs have historically comprised the majority of our manufacturing expenses, and these costs are relatively fixed and do not fluctuate proportionately with net revenues. The decrease in 2006 from 2005 was primarily due to lower revenues, transfer of production to our lower cost German manufacturing facility, manufacturing savings as a result of closing our Palo Alto manufacturing location, partially offset by inventory reserves for our window film products.

Cost of sales increased 1.2% or \$0.5 million in 2005 from 2004. As a percent of sales, cost of sales was 68% in 2005 compared to 63.9% in 2004. The increase in 2005 from 2004 was the result of increased material costs for component materials and increased production levels. The production levels increased in 2005 compared to 2004 due to the increase in customers' demand for our products.

Gross margin

Gross margin increased from 32% in 2005 to 38.5% in 2006. The increase in gross margin was largely the result of the transfer of our manufacturing operations from our Palo Alto facility to our lower cost German manufacturing facility in the second half of 2006. Gross margin decreased from 36.1% in 2004 to 32% in 2005. This decrease in gross margin was largely the result of product mix and increased component material costs. Our window film and electronic display products cost more to make than other products. We expect our gross margin percentage in 2007 to be higher than 2006 as a result of transferring all of our manufacturing operations to our lower cost production facility in Germany.

Table of Contents

Operating expenses

Research and development spending increased 33% or \$1.7 million in 2006 compared to 2005. The increase was due in part to a full year of increased labor and employee benefit costs as a result of expanding our engineering organization. In 2005, we invested in additional engineering resources to support our increased focus on new products and technologies. Research and development spending increased 60% or \$1.9 million in 2005 compared to 2004. The increase was due to the expansion of our engineering organization in the second half of 2005.

Our selling, general and administrative expenses increased 44% or \$3.7 million in 2006 from 2005. The increase in selling, general and administrative expenses in 2006 was primarily due to accruals for leasehold asset retirement obligations of \$1.7 million, severance cost of our former CEO of \$344,000, costs related to the settlement of a former employee lawsuit of \$320,000, higher marketing expenses of \$179,000 and higher facility expenses of \$200,000. Our selling, general and administrative expenses decreased 18% or \$1.9 million in 2005 from 2004 due to higher legal and accounting fees of \$0.8 million, outside services and consulting expense of \$0.5 million, and compensation expense of \$0.5 million in 2004, partially offset by higher Sarbanes-Oxley compliance expenses of \$0.3 million in 2005.

We expect our total operating expenses to be lower in 2007 than 2006 as a result of our efforts to reduce costs.

Restructuring costs

In 2006, we recorded a charge to operating expenses of \$915,000 as a result of further reductions in workforce at our Palo Alto manufacturing facility and the relocation of the company's headquarters office to Fabian Way, Palo Alto, California. During 2005 and 2004, we did not incur restructuring costs.

Recoveries for long-lived assets

In June 2004, we had a recovery for long-lived assets as a result of selling a production machine from our Tempe manufacturing facility to a third party. The sale value was \$1.7 million, which included the price of the production machine, other miscellaneous hardware, training to be provided by us and operating software to run the machine. All of our obligations were completed and we recognized a gain of \$1.5 million, representing 90% of the sale value, less book value of the machine of \$0.1 million. Collection of the final 10% was contingent on installation of the machine by a third party or 120 days after shipment. We collected the final 10% in January 2005 and recognized the gain in the amount of \$0.2 million in the first quarter of 2005. In 2006, we incurred approximately \$0.3 million in impairment charges for long-lived assets and realized recoveries of approximately \$0.5 million.

Income (loss) from operations

Income from operations decreased from \$4.2 million in 2005 to a loss of \$4.0 million in 2006. The decrease was a result of lower revenues, higher research and development expenses, increased selling, general and administrative costs and increased restructuring charges. Income from operations decreased from \$8.9 million in 2004 to \$4.2 million in 2005. The decrease was a result of lower revenues, higher research and development expenses, and lower recoveries for long-lived assets.

Table of Contents

Interest expense, net

Interest expense, net, decreased from \$1.0 million in 2005 to \$0.7 million in 2006. The decrease in interest expense, net, was primarily attributable to less outstanding debt in 2006 compared to 2005. Interest expense, net, decreased from \$2.2 million in 2004 to \$1.0 million in 2005. The decrease in interest expense, net, was primarily attributable to less outstanding debt in 2005 compared to 2004.

Cost of warrants issued

In the first quarter of 2004, due to the structure of the transaction contemplated by the investment agreement with the Investors, we had insufficient authorized and un-issued shares to satisfy the existing commitments had all outstanding warrants been exercised, thereby triggering liability classification for all outstanding warrants and a charge to non-operating expense. We re-measured the fair value of the warrants at the issuance date and each subsequent quarter-end, based on a methodology used by a third party, until our stockholders approved the increase of the number of authorized shares of our common stock in the fourth quarter of 2004. As a result of this, we incurred \$6.8 million in cost of warrants issued in 2004. No warrants were issued in 2005 and 2006.

Other income, net

Other income, net, increased from \$0.1 million in 2005 to \$0.2 million in 2006. Other income, net, reflects foreign exchange transaction gains and losses. Some of our transactions with foreign customers are denominated in foreign currencies, principally the Euro. As exchange rates fluctuate relative to the U.S. dollar, exchange gains and losses occur. Other income, net decreased from \$0.5 million in 2004 to \$0.1 million in 2005. The reduction in other income in 2005 from 2004 was primarily attributable to the net exchange loss due to Euro fluctuation of \$0.3 million.

Income (loss) before provision for income taxes

The pre-tax income decrease from \$3.3 million in 2005 to a loss of \$4.6 million in 2006 was a result of lower revenues and higher operating expenses. The pre-tax income increase from \$0.4 million in 2004 to \$3.3 million in 2005 was a result of lower interest expense and no cost of warrants issued.

Provision for income taxes

The provision for income taxes in 2006, 2005 and 2004 was related to our German subsidiary, Southwall Europe GmbH ("SEG"). In 2006, our provision for income taxes increased to approximately \$0.9 million. The increase relates to higher taxable income in our German subsidiary and additional taxes paid in 2006 relating to an income tax audit for years 1999 to 2002 at SEG. In 2005, our provision for income taxes decreased approximately to \$0.6 million. The decrease relates to a reversal of approximately \$0.4 million of foreign income tax accrual relating to prior years, recognition of deferred tax assets of approximately \$0.1 million at December 31, 2005 and lower taxable income in our German subsidiary.

Net income (loss)

The decrease from net income of \$3.3 million in 2005 to net loss of \$5.5 million in 2006 was a result of lower revenues, higher operating expenses, recognition of stock compensation expense and a higher provision for income taxes. The increase from net loss of \$0.2 million in 2004 to net income of \$3.3 million in 2005 was a result of lower interest expense, no cost of warrants issued and a lower provision for income taxes.

Table of Contents

Deemed dividend on preferred stock

We accrued \$0.5 million of deemed dividend on preferred stock in each of the years 2006 and 2005 as a result of the conversion of our secured convertible promissory notes into shares of Series A preferred stock in December 2004. The Series A preferred stock carries a 10% cumulative dividend rate. There was no such dividend in 2004.

Management has a plan to return into profitability in the future starting with fiscal year 2007, and believes that its planned cash flows will sustain its operations in 2007 and beyond. However, there is no assurance that this would happen. See item A.Risk Factors.

Liquidity and capital resources

Liquidity

Our principal liquidity requirements are for working capital, consisting primarily of accounts receivable and inventories. We believe that because of the relatively long production cycle of certain of our products, our inventories will continue to represent a significant portion of our working capital. We incurred net losses in 2006 and 2004 and we incurred net income in 2005. We incurred positive cash flow from operations in 2006, 2005 and 2004.

Our cash and cash equivalents decreased by \$1.1 million from \$6.6 million at December 31, 2005 to \$5.5 million at December 31, 2006. Cash provided by operating activities decreased by \$3.3 million from \$4.0 million in 2005 to \$0.7 million in 2006. The decrease in cash provided by operating activities during 2006 was primarily the result of net loss for the year of \$5.5 million, impairment recoveries from long-lived assets of \$0.2 million and an increase in other current and non-current assets of \$0.1 million partially offset by deferred income taxes of \$0.05 million, non-cash depreciation of \$2.4 million, a stock-based compensation charge of \$0.6 million, a decrease in accounts receivable of \$3.1 million, a decrease in inventories of \$0.3 million and a an increase in accounts payable and accrued liabilities of \$0.2 million. Cash used in investing activities in 2006 was \$0.5 million compared to \$0.3 million used in investing activities in 2005. The increase in cash used in investing activities from 2005 to 2006 was due to increased expenditures for property, plant and equipment and other assets partially offset by proceeds from sale of fixed assets. Cash used in financing activities decreased by \$0.1 million from \$1.6 million used in financing activities in 2005 to \$1.5 million used in financing activities in 2006. The decrease was the result of less debt outstanding in 2006, which resulted in lower principal repayments.

Our cash and cash equivalents increased by \$2.1 million from \$4.5 million at December 31, 2004 to \$6.6 million at December 31, 2005. Cash provided by operating activities increased by \$0.2 million from \$3.8 million provided by operations in 2004, to \$4.0 million provided by operations in 2005. The increase in cash provided by operating activities during 2005 was primarily the result of net income for the year of \$3.3 million, non-cash depreciation of \$2.2 million, and decreases in inventories of \$2.5 million and in other current and non-current assets of \$0.9 million partially offset by impairment recoveries from long-lived assets of \$0.2 million, change in deferred income taxes of \$0.5 million, an increase in accounts receivable of \$0.9 million and a decrease in accounts payable and accrued liabilities of \$3.4 million. Cash used in investing activities in 2005 was \$0.3 million compared to \$1.3 million provided by investing activities in 2004. The decrease was primarily due to proceeds from the sale of a fixed asset of \$1.6 million in 2004. Cash used in financing activities decreased by \$0.7 million from \$2.2 million used in financing activities in 2004 to \$1.6 million used in financing activities in 2005. The decrease was the result of less debt outstanding in 2005, which resulted in lower principal repayments.

Table of Contents

We entered into an agreement with the Saxony government in May 1999 under which we receive investment grants. As of December 31, 2006, we had received 5.0 million Euros, or \$5.0 million at a historical rate of the grants and accounted for these grants by applying the proceeds received to reduce the cost of our fixed assets of our Dresden manufacturing facility. Additionally, as of December 31, 2006, we had a balance remaining from the government grants received in May 1999 of 167 Euros which had been recorded as an advance and held as restricted cash until we receive approval from the Saxony government to apply the funds to reduce our capital expenditures. If we fail to meet certain requirements in connection with these grants, the Saxony government has the right to demand repayment of the grants. The grants and investment allowances, if any, that we are entitled to seek from the Saxony government vary from year to year based upon the amount of capital expenditures that meet the above requirements. Generally, we are not eligible to see total investment grants for any year in excess of 33% of our eligible capital expenditures for that year. The Company cannot guarantee that it will be eligible for or receive additional grants or allowances in the future. As of December 31, 2006, we were in compliance with the requirements mentioned above.

Borrowing arrangements

On April 28, 2005, we entered into a credit agreement (the "Credit Agreement") with Wells Fargo HSBC Trade Bank, N.A. (the "Bank"). The Credit Agreement provides for two facilities. The first facility is a revolving line of credit under which we may from time to time borrow up to \$3 million, subject to satisfaction of certain conditions. Amounts borrowed under the first facility bear interest at the prime rate minus 1.75% per annum or LIBOR plus 1% per annum, at our option. We borrowed approximately \$3.0 million from this facility on April 28, 2005 which amount remained outstanding as of December 31, 2006.

The second facility is a formula line under which we may, from time to time, borrow up to \$3 million, subject to certain conditions, with advances of up to 80% of eligible accounts receivable. Amounts borrowed under the second facility bear interest at the prime rate minus 0.25% per annum. We may borrow under the second facility only if we meet certain financial covenants. There were no amounts outstanding under this second facility at December 31, 2006.

All borrowings under both facilities are collateralized by our inventory, receivables, raw material and work in progress. In addition, the first facility under the Credit Agreement is collateralized by a letter of credit posted by Needham & Company, one of our stockholders.

The terms of the Credit Agreement, among other things, limit our ability to (i) incur, assume or guarantee additional indebtedness in excess of \$13.5 million (other than pursuant to the Credit Agreement), (ii) pay dividends or repurchase stock (except up to \$0.6 million per year of dividends on preferred stock), (iii) incur liens upon the collateral pledged to the bank, (iv) make any loans or advances to, or investments in, any person or entity outside the ordinary course of business, (v) merge, consolidate, sell or otherwise dispose of substantially all or a substantial or material portion of our assets, (vi) enter into transactions with affiliates, and (vii) make acquisitions other than up to an aggregate amount of \$3 million and (viii) to make capital expenditures in any fiscal year in excess of \$1.5 million.

Table of Contents

The Credit Agreement provides for events of default, which include, among others, (a) nonpayment of amounts when due (with no grace periods), (b) the breach of our representations or covenants or other agreements in the Credit Agreement or related documents, (c) payment defaults or accelerations of our other indebtedness, (d) a failure to pay certain judgments, (e) the occurrence of any event or condition that the Bank believes impairs or is substantially likely to impair the prospects of payment or performance by us, and (f) certain events of bankruptcy, insolvency or reorganization. Generally, if an event of default occurs, the Bank may declare all outstanding indebtedness under the Credit Agreement to be due and payable.

The foregoing description does not purport to be a complete statement of the parties' rights and obligations under the Credit Agreement and the transactions contemplated thereby or a complete explanation of the material terms thereof.

On May 31, 2006, we renewed the credit agreement for the first facility under the Credit Agreement with the Bank but did not renew the second facility. The renewed credit agreement will expire on May 31, 2007.

On March 29, 2007, Southwall Technologies Inc. ("Southwall") entered into a new Credit Agreement ("Credit Agreement") with Bridge Bank, N.A. ("Bank"). The Credit Agreement provides for two facilities. The first facility is a revolving line of credit for the lesser of \$3 million OR the face value of the letter of credit used to support the facility. The proceeds of the facility will be used to pay off Wells Fargo HSBC Trade Bank. Amounts borrowed under the first facility bear interest at the prime rate minus 1.75% and are collateralized by a \$3 million standby letter of credit from Needham & Company. ("Needham"). At December 31, 2006, Needham and its affiliates owned 41.7% of our outstanding common stock and series A 10% Cumulative Convertible Preferred Stock convertible into another 5% of our outstanding common stock. If the letter of credit being provided by Needham is not released by August 1, 2007, Needham will begin receiving from us quarterly interest payments on the \$3 million supporting the letter of credit at the rate of 12.8% per annum.

The second facility is a \$3 million revolving line of credit line under which we may, from time to time, borrow up to 80% of eligible accounts receivables (net of pre-paid deposits, pre-billed invoices, deferred revenue, offsets, contra related to each specific account debtor and other requirements in the lender's discretion). Amounts borrowed under the second facility bear interest at prime plus 1.75% annualized on the average daily finance amount outstanding. The second facility also provides for a \$2 million letter of credit subfacility. All borrowings under the facilities will be collateralized by all of our assets and are subject to certain covenants. These covenants include that while the second facility is outstanding (a) we will maintain a minimum current ratio of 1.00 to 1.00 for the months through May 31, 2007 (thereafter, starting with month ending June 30, 2007, we need to maintain a current ratio of 1.25 to 1.00 on a monthly basis); and (b) our quarterly net loss to shareholders (including deemed dividend) will not exceed \$400,000 for any quarter after September 30, 2007.

The terms of the Credit Agreement, among other things, limit our ability to (i) incur, assume or guarantee additional indebtedness (other than pursuant to the Credit Agreement), (ii) incur liens upon the collateral pledged to the bank, and (iii) merge, consolidate, sell or otherwise dispose of substantially all or a substantial or material portion of our assets.

The Credit Agreement provides for events of default, which include, among others, (a) nonpayment of amounts when due (with no grace periods), (b) the breach of our representations or covenants or other agreements in the Credit Agreement or related documents, (c) defaults or accelerations of our other indebtedness, (d) a failure to pay certain judgments, (e) the occurrence of any event or condition that the Bank believes impairs or is substantially likely to impair the prospects of payment or performance by us, and (f) certain events of bankruptcy, insolvency or reorganization. Generally, if an event of default occurs, the Bank may declare all outstanding indebtedness under the Credit Agreement to be due and payable.

Table of Contents

The maturity date of the facilities is March 28, 2008.

The foregoing description does not purport to be a complete statement of the parties' rights and obligations under the Credit Agreement and the transactions contemplated thereby or a complete explanation of the material terms thereof

Our borrowing arrangements with various German banks as of December 31, 2006 are described in Note 6 of Notes to our Consolidated Financial Statements (Item 8) set forth herein. We are in compliance with all of the covenants of the German bank loans, and we have classified \$0.8 million and \$7.3 million outstanding under the German bank loans as a short-term liability and long-term liability, respectively, at December 31, 2006. We are obligated to pay an aggregate of \$0.8 million in principal amount under our German bank loans in 2007.

As of December 31, 2003, we were in default under a master sale-leaseback agreement with respect to two of our production machines. We had withheld lease payments in connection with a dispute with the leasing company, Matrix Funding Corporation. An agent purporting to act on behalf of the leasing company filed suit against us to recover the unpaid lease payments and the alleged residual value of the machines, totaling \$6.5 million in the aggregate. In February 2004, we reached a settlement agreement with the agent for \$2.0 million to be repaid over six years at a stepped rate of interest, and we returned the equipment in question to the plaintiffs (See Note 6 of Notes to Consolidated Financial Statements (Item 8) - Term Debt). At December 31, 2006, the carrying value of the liability was \$4.0 million (\$1.6 million of principal, plus \$2.4 million of accrued interest). We are obligated to pay an aggregate of \$0.3 million under this agreement in 2007.

Capital expenditures

We spent approximately \$0.8 million and \$0.4 million in capital expenditures in 2005 and 2004, respectively, primarily to maintain and upgrade our production facilities. In 2006, we spent approximately \$1.2 million for maintenance of the production machines and research and development tools. We expect to spend approximately \$1.8 million in 2007 on maintenance of the production machines and research and development tools.

Future Obligations

Our future payment obligations on our borrowings pursuant to our term debt, capital lease obligations, non-cancelable operating leases and other non-cancelable contractual commitments are as follows (in thousands):

	Total	Less 1 Than Year	1-3 Years	3-5 Years	Greater 5 Than Years
Contractual Obligations:					
Term debt (1)	\$ 9,627	\$ 1,059	\$ 4,708	\$ 1,391	\$ 2,469
Line of credit	2,996	2,996	--	--	--
Operating Leases (2)	2,168	660	802	706	--
Total Contractual Cash Obligations	\$ 14,791	\$ 4,715	\$ 5,510	\$ 2,097	\$ 2,469

(1) Represents loan agreements with Portfolio Financing Servicing Company, Bank of America and Lehman Brothers, and several German banks.

(2) Represents the remaining rents owed on a building we rent in Palo Alto, California.

Table of Contents

ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

We are exposed to the impact of interest rate changes, foreign currency fluctuations, and changes in the market values of our investments.

Financing risk: Our exposure to market rate risk for changes in interest rates relates primarily to our line of credit which bears an interest rate equal to 1.0% above the bank LIBOR rate (which was 5.3% at December 31, 2006) and is calculated based on amounts borrowed under the facility. In addition, the interest rate on one of our German loans has been reset to the prevailing market rate of 5.75% and another of our German loans will have its interest rate reset to the prevailing market rate in 2009. Fluctuations or changes in interest rates may adversely affect our expected interest expense. The effect of a 10% adverse fluctuation in the interest rate on our line of credit and bank loans would have had an effect of about \$1.3 million on our interest expense for 2006.

Investment risk: We invest our excess cash in money market accounts and, by practice, limit the amount of exposure to any one institution. Investments in both fixed rate and floating rate interest earning instruments carry a degree of interest rate risk. Fixed rate securities may have their fair market value adversely affected due to a rise in interest rates, while floating rate securities may produce less income than expected if interest rates fall. The effect of a 10% fluctuation in the interest rate of any of our floating rate securities would have had an adverse effect of less than \$10,000 for 2006.

Foreign currency risk: International revenues (defined as sales to customers located outside of the United States) accounted for approximately 68% of our total sales in 2006. Approximately 30% of our international revenues were denominated in Euros relating to sales from our Dresden operation in 2006. The other 70% of our international sales were denominated in US dollars. In addition, certain transactions with foreign suppliers are denominated in foreign currencies (principally Japanese Yen). The effect of a 10% fluctuation in the Euro exchange rate would have had an effect of approximately \$0.7 million on net revenues for 2006 and the effect on expenses of a 10% fluctuation in the Yen exchange rate would have been immaterial.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
Southwall Technologies Inc.

We have audited the accompanying consolidated balance sheets of Southwall Technologies Inc. and its subsidiaries as of December 31, 2006 and 2005, and the related consolidated statements of operations, stockholders' equity and cash flows for each of the three years in the period ended December 31, 2006. Our audits also included the financial statement schedule listed in the Index at Item 15(a)(2). These consolidated financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The Company is not required to have, nor have we been engaged to perform, an audit of the Company's internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the consolidated financial position of Southwall Technologies Inc. and its subsidiaries as of December 31, 2006 and 2005, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2006, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, the related financial statement schedule, when considered in relation to the consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

As discussed in Note 1 to the consolidated financial statements, on January 1, 2006 the Company changed its method of accounting for stock-based compensation as a result of adopting Statement of Financial Accounting Standards No. 123(revised 2004), "Share-Based Payment" applying the modified prospective method.

SOUTHWALL TECHNOLOGIES INC.
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS
(amounts in thousands, except per share data)

NOTE 1 - THE COMPANY AND A SUMMARY OF ITS SIGNIFICANT ACCOUNTING POLICIES:

The Company

Southwall Technologies Inc. ("Southwall", "we", "us", "our", and the "Company" refer to Southwall Technologies Inc. and its subsidiaries) is a global developer, manufacturer and marketer of thin film coatings on flexible substrates for the automotive glass, electronic display, window film, and architectural glass markets. We have developed a variety of products that control sunlight in automotive glass, reduce light reflection, reduce electromagnetic radiation and improve image quality in electronic display products and conserve energy in architectural products. Our products consist of transparent solar-control films for automotive glass; anti-reflective films for computer screens, including flat panel displays, plasma displays, and transparent conductive films for use in touch screen and liquid crystal displays; energy control films for architectural glass; and various other coatings.

Principles of consolidation

The consolidated financial statements include the accounts of Southwall and its wholly-owned subsidiaries. All inter-company balances and transactions have been eliminated in consolidation.

Foreign currency translation

The Company's German subsidiary uses the Euro as its functional currency. Accordingly, the financial statements of this subsidiary are translated into U.S. dollars in accordance with Statement of Financial Accounting Standards ("SFAS") No. 52, "Foreign Currency Translation." Assets and liabilities are translated at exchange rates in effect at the balance sheet date and revenue and expense accounts at average exchange rates during the period. Exchange gains or losses from the translation of assets and liabilities of \$1,164 in 2006 are included in the cumulative translation adjustment component of accumulated other comprehensive income (loss). Gains and (losses) arising for transactions denominated in currencies other than the functional currency were \$36, (\$320) and \$457 in 2006, 2005 and 2004, respectively, and are included in other income, net.

Management estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Cash and cash equivalents

The Company considers all highly liquid instruments with an original maturity of three months or less from the date of purchase to be cash equivalents.

Table of Contents

Restricted cash

Restricted cash consists of the unapplied portion of grants received from the Saxony government to co-finance the costs of the construction of the Company's Dresden facility. In the event the Company fails to meet certain conditions related to the grants, the Saxony government has the right to reclaim the total grants. (See Note 7).

Revenue recognition

We recognize revenue when persuasive evidence of an arrangement exists, delivery has occurred or services have been provided, the sale price is fixed or determinable, and collectibility is reasonably assured. Accordingly, we generally recognize revenue from product sales when the terms of sale transfer title and risk of loss, which occurs either upon shipment or upon receipt by customers. In connection with product sales, we make allowances for estimated returns and warranties. We adjust these allowances periodically to reflect our actual and anticipated experience. If any of these conditions to recognize revenue is not met, we defer revenue recognition. At December 31, 2006, deferred revenues were \$275 and are included in other accrued liabilities in the accompanying balance sheet.

The Company has agreements under which it receives fees for certain licensing rights to technology and products. The Company does not allocate cost of sales to license revenues because such costs are insignificant. License revenues associated with these agreements are recognized ratably over the period of the contract when collection of the resulting receivable is probable. License revenues were \$64, \$57 and \$191 in 2006, 2005 and 2004, respectively.

Accounts receivable and allowances for doubtful accounts

Accounts receivable are recorded at the invoiced amount and are not interest bearing. We establish allowances for doubtful accounts for specifically identified, as well as anticipated, doubtful accounts based on credit profiles of our customers, current economic trends, contractual terms and conditions and historical payment. As of December 31, 2006 and 2005, our balance sheets included allowances for doubtful accounts of \$102 and \$208, respectively.

Accrual for sales returns and warranties

We establish allowances for sales returns for specifically identified product quality claims as well as estimated potential future claims based on our sales returns and warranty experience. We offer a ten-year, five-year and less than a year quality claim periods for our products. As of December 31, 2006 and 2005, our balance sheets included accrual for sales returns and warranties of \$1,415 and \$1,556, respectively.

Concentration of credit risk

Financial instruments that potentially subject the Company to significant concentrations of credit risk consist principally of cash and cash equivalents and trade accounts receivable.

The Company invests in a variety of financial instruments such as certificates of deposits and money market funds. By policy, the Company limits the amount of credit exposure to any one financial institution or commercial issuer. For US funds, we have \$4.2 million in excess of \$0.1 million of FDIC coverage. We also have approximately \$1.2 million in foreign banks.

Table of Contents

The Company sells its products throughout the world. The Company performs ongoing credit evaluations of its customers' financial condition and, generally, requires no collateral from its customers. The Company maintains an allowance for doubtful accounts based upon anticipated collectibility of all accounts receivable.

Our ten largest customers accounted for approximately 77%, 81% and 79% of our net sales in, 2006, 2005 and 2004, respectively. During 2006, Mitsui Chemicals, Saint Gobain Sekurit, V-Kool and Pilkington PLC accounted for 24.6%, 8.5%, 20.0% and 9.5%, respectively, of our net revenues. During 2005, Mitsui Chemicals, Saint Gobain Sekurit, V-Kool and Pilkington PLC accounted for 22.7%, 19.8%, 19.5% and 7.1%, respectively, of our net revenues. During 2004, Mitsui Chemicals, Saint Gobain Sekurit, V-Kool and Pilkington PLC accounted for 28.4%, 17.8%, 11.4% and 10.9%, respectively, of our net revenues.

The Company expects to continue to derive a significant portion of its net product revenues from a relatively small number of customers. Accordingly, the loss of a large customer could materially hurt the Company's business, and the deferral or loss of anticipated orders from a small number of customers could materially reduce our revenue, operating results and cash flows in any period.

At December 31, 2006, receivables from three customers represented 29%, 18% and 14% of the Company's total accounts receivable. At December 31, 2005, receivables from three customers represented 24%, 20% and 13% of the Company's total accounts receivable.

Inventories

Inventories are stated at the lower of standard cost (determined by the average cost method) or market (net realizable value). In January 2006, the Company changed its inventory valuation method from the first-in, first-out method to the average cost method. With the closing of the Company's Palo Alto, California manufacturing facility and all production now being performed in our German subsidiary's facility, the use of the average cost method was deemed preferable as it both accommodates our German subsidiary's statutory reporting requirements and fairly approximates actual costs. The impact of the change was not material. Standard costs, which approximate actual, include materials, labor and manufacturing overhead. The Company establishes provisions for excess and obsolete inventories to reduce such inventories to their estimated net realizable value. Such provisions are charged to cost of sales.

Property, plant and equipment

Property and equipment are stated at cost. The Company uses the units-of-production method for calculating depreciation on certain of its production machines and the straight-line method for all other property and equipment. Estimated useful lives of the assets range from five to ten years. On its large-scale production machines for which the units-of- production depreciation method is used, the Company records minimum annual depreciation of at least one-half of the depreciation that would have been recorded utilizing the straight-line depreciation method over a ten-year life. Leasehold improvements are amortized using the term of the related lease or the economic life of the improvements, if shorter.

Additions, major improvements and enhancements are included in the asset accounts at cost. Ordinary maintenance and repairs are charged to expense as incurred. Gains or losses from disposal are included in other income (expense). Depreciation and amortization expense related to property and equipment for 2006, 2005 and 2004 was \$2,406, \$2,195 and \$2,503, respectively.

Table of Contents

Impairment of long-lived assets

Long-lived assets held and used by the Company are reviewed for impairment whenever events or circumstances indicate that the carrying amount of an asset may not be recoverable. Factors that could trigger an impairment review include the following: (i) significant negative industry or economic trends; (ii) exiting an activity in conjunction with a restructuring of operations; (iii) current, historical or projected losses that demonstrate continuing losses associated with an asset; or (iv) a significant decline in our market capitalization, for an extended period of time, relative to net book value. When we determine that there is an indicator that the carrying value of long-lived assets may not be recoverable, we measure impairment based on estimates of future cash flows. These estimates include assumptions about future conditions such as future revenues, gross margins, operating expenses within our company, the fair values of certain assets based on appraisals, and industry trends. All long-lived assets to be disposed of are reported at the lower of carrying amount or fair market value, less expected selling costs. As a result of our decision to cease manufacturing in Palo Alto, we recorded a \$0.3 million impairment charge related to a production machine which was decommissioned in the second quarter of 2006. In addition for 2006, we recorded the recovery of \$0.5 million of previously recorded impairment charges related to long-lived assets which were impaired in prior and current years.

Fair value disclosures of financial instruments

The Company has estimated the fair value amounts of its financial instruments, including cash and cash equivalents, accounts receivable, accounts payable and accrued liabilities using available market information and valuation methodologies considered to be appropriate and have determined that the book value of those instruments at December 31, 2006 and 2005 approximates fair value. Based on borrowing rates currently available to the Company for debt with similar terms, the carrying value of our term debt approximates fair value.

Derivative financial instruments

The Company accounts for derivative financial instruments under SFAS No. 133, "Accounting for Derivative Instruments and Hedging Activities". SFAS No. 133 establishes methods of accounting for derivative financial instruments and hedging activities related to those instruments as well as other hedging activities. As of December 31, 2006, we did not have any derivative financial instruments or hedging activities.

Research and development expense

Research and development costs are expensed as incurred. Costs included in research and development expense are salaries, building costs, utilities, administrative expenses and allocated costs.

Comprehensive income (loss)

The Company has adopted the provisions of SFAS No. 130 "Reporting Comprehensive Income". SFAS No. 130 establishes standards for reporting and display in the financial statements of total net income (loss) and the components of all other non-owner changes in equity, referred to as comprehensive income (loss). Accordingly, the Company has reported the translation gain (loss) from the consolidation of its foreign subsidiary in comprehensive income (loss).

Table of Contents

Restructuring costs

For restructuring activities initiated prior to December 31, 2002, Southwall recorded restructuring costs when the Company committed to a plan to exit certain facilities, and significant changes to the exit plan were not likely to occur, in accordance with EITF 94-3, "Liability Recognition for Certain Employee Termination Benefits and Other Costs to Exit an Activity". For restructuring activities initiated after December 31, 2002, the Company records restructuring reserves when management has approved a plan to restructure operations and a liability has been incurred in accordance with SFAS No. 146, "Accounting for Costs Associated with Exit or Disposal Activities".

Stock-Based Compensation

Effective January 1, 2006, the Company adopted the fair value recognition provisions of SFAS No. 123 (revised 2004), "Share-Based Payment" ("SFAS 123R"), using the modified prospective transition method and therefore has not restated results for prior periods. Under this transition method, stock-based compensation expense in fiscal 2006 included stock-based compensation expense for all share-based payment awards granted prior to, but not yet vested as of January 1, 2006, based on the grant-date fair value estimated in accordance with the original provision of SFAS No. 123, "Accounting for Stock-Based Compensation" ("SFAS 123"). Stock-based compensation expense for all share-based payment awards granted after January 1, 2006, is based on the grant-date fair value estimated in accordance with the provisions of SFAS 123R. SFAS 123R requires companies to estimate the fair value of the share-based payment awards on the date of grant using an option pricing model. The Company uses the Black-Scholes option model. The value portion of the award that is ultimately expected to vest is recognized as compensation expense on a straight-line basis over the requisite service period of the award, which is generally the option vesting term of four years. Prior to the adoption of SFAS 123R, the Company recognized stock-based compensation expense in accordance with Accounting Principles Board ("APB") Opinion No. 25, "Accounting for Stock Issued to Employees" ("APB 25"). In March 2005, the Securities and Exchange Commission (the "SEC") issued Staff Accounting Bulletin No. 107 ("SAB 107") regarding the SEC's interpretation of SFAS 123R and the valuation of share-based payments for public companies. The Company has applied the provisions of SAB 107 in its adoption of SFAS 123R.

In November 2005, the Financial Accounting Standards Board ("FASB") issued FASB Staff Position ("FSP") No. FAS 123R-3, "Transition Election Related To Accounting for Tax Effects of Share-Based Payment Awards" ("FSP 123R-3"). The Company has elected to adopt the alternative transition method provided in the FSP 123R-3 for calculating the tax effects of stock-based compensation pursuant to SFAS 123R. The alternative transition method includes simplified methods to establish the beginning balance of the additional paid-in capital pool ("APIC pool") related to the tax effects of employee stock-based compensation, and to determine the subsequent impact on the APIC pool and Consolidated Statements of Cash Flows of the tax effects of employee stock-based compensation awards that are outstanding upon adoption of SFAS 123R.

Income taxes

The Company accounts for deferred income taxes under the liability approach whereby the expected future tax consequences of temporary differences between the book and tax basis of assets and liabilities are recognized as deferred tax assets and liabilities. A valuation allowance is established for any deferred tax assets for which realization is uncertain.

Table of Contents*Net income (loss) per share*

Basic net income (loss) per share is computed by dividing net income (loss) attributable to common stockholders (numerator) by the weighted average number of common shares outstanding (denominator) for the period. Diluted net income (loss) per share gives effect to all dilutive common shares potentially outstanding during the period, including stock options, warrants to purchase common stock and convertible preferred stock. Preferred stock dividends are added back to net income attributable to common stockholders since they would not have been accrued if the preferred stock had been converted to common stock at the beginning of the period.

The Company excludes options from the computation of diluted weighted average shares outstanding if the exercise price of the options is greater than the average market price of the shares because the inclusion of these options would be anti-dilutive to earnings per share. Accordingly, at December 31, 2005, stock options to purchase 2,284 shares at a weighted average price of \$2.83 per share were excluded from the computation of diluted weighted average shares outstanding.

In net loss periods, the basic and diluted weighted average shares of common stock and common stock equivalents are the same because inclusion of common stock equivalents would be anti-dilutive. Accordingly, at December 31, 2006 and 2004, there was no difference between the denominators used for the calculation of basic and diluted net income (loss) per share. At December 31, 2006 and 2004, there were 5,519 and 4,039 anti-dilutive options, respectively, excluded from the net loss per share calculation.

Tables summarizing net income (loss) attributable to common stockholders, for diluted net income (loss) per share, and shares outstanding are shown below (in thousands):

	Years Ended December 31,		
	2006	2005	2004

Table of Contents

Recent Pronouncements

In June 2006, the Financial Accounting Standards Board issued Interpretation No. 48, Accounting for Uncertainty in Income Taxes, an interpretation of FAS 109, Accounting for Income Taxes (FIN 48), to create a single model to address accounting for uncertainty in tax positions. FIN 48 clarifies the accounting for income taxes, by prescribing a minimum threshold a tax position is required to meet before being recognized in the financial statements. FIN 48 also provides guidance on derecognition, measurement, classification, interest and penalties, accounting in interim periods, disclosure and transition. FIN 48 is effective for fiscal years beginning after December 15, 2006. As required, the Company has adopted FIN 48 as of January 1, 2007. The Company does not expect that the adoption of FIN 48 will have a significant impact on the Company's financial position and results of operations in the first quarter of 2007.

In September 2006, the Financial Accounting Standards Board ("FASB") issued Statement of Financial Accounting Standards No. 157, "Fair Value Measurements" ("SFAS 157"). This statement defines fair value, establishes a framework for measuring fair value in generally accepted accounting principles and expands disclosures about fair value measurements. SFAS 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. We are currently evaluating the effect that the adoption of SFAS 157 will have on our financial position and results of operations.

On September 13, 2006, the Securities and Exchange Commission ("SEC") issues Staff Accounting Bulletin No. 108 ("SAB 108"). The interpretations in SAB 108 were issued to address diversity in practice in quantifying financial statement misstatement and the potential under current practice for the build up of improper amounts on the balance sheet. We do not expect that the adoption of SAB 108 will have a significant impact on the Company's financial position and result of operations in the first quarter of 2007.

In February 2007, the Financial Accounting Standards Board ("FASB") issued Statement of Financial Accounting Standards No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities - Including an amendment of FASB Statement No. 115" ("SFAS 159"). The objective of this statement is to improve financial reporting by providing entities with the opportunity to mitigate volatility in reported earnings caused by measuring related assets and liabilities differently without having to apply complex hedge accounting provisions. SFAS 159 is effective as of the beginning of an entity's first fiscal year that begins after November 15, 2007. We are currently evaluating the effect that the adoption of SFAS 159 will have on our financial position and results of operations.

In addition, the Company is reviewing the Emerging Issues Task Force 06-3 ("EITF 06-3") issued in June 2006, effective to financial reporting for interim and annual reporting periods beginning after December 15, 2006. This EITF applies to taxes assessed by various governmental authorities on many different types of transactions. These taxes range from sales taxes that are applied to a broad class of transactions involving a wide range of goods and services to excise taxes that are applied only to specific types of transactions or items. We are currently evaluating the effect that the adoption of EITF 06-3 will have on our financial position and results of operations.

Table of Contents**NOTE 2 - STOCK-BASED COMPENSATION**

Prior to January 1, 2006, the Company accounted for its stock option plans under the recognition and measurement provisions of APB 25. Accordingly, the Company generally recognized compensation expense only when it granted options with a discounted exercise price. Any resulting compensation expense was recognized ratably over the associated service period, which was generally the option vesting term. Prior to January 1, 2006, the Company provided pro-forma disclosure amounts in accordance with SFAS No. 148, "Accounting for Stock-Based Compensation-Transition and Disclosure" ("SFAS 148"), as if the fair value method defined by SFAS 123 had been applied to its stock-based compensation. As a result of adopting SFAS 123R, losses before income taxes in fiscal 2006 were higher by \$551, than if we had continued to account for stock-based compensation under APB 25. The impact on both basic and diluted loss per share in fiscal 2006 was \$0.02 per share.

Effective January 1, 2006, the Company adopted the provisions of SFAS 123R requiring it to recognize expense related to the fair value of its stock-based compensation awards. The Company elected to use the modified prospective transition method as permitted by SFAS 123R and therefore has not restated its financial results for prior periods. Under this transition method, stock-based compensation expense for the fiscal year 2006 includes compensation expense for all stock-based compensation awards granted prior to, but not yet vested as of January 1, 2006, based on the grant date fair value estimated in accordance with the original provisions of SFAS 123. Stock-based compensation expense for all stock-based compensation awards granted subsequent to January 1, 2006 was based on the grant-date fair value estimated in accordance with the provisions of SFAS 123R. SFAS 123R requires companies to estimate the fair value of the share-based payment awards on the date of grant using an option pricing model. The Company uses the Black-Scholes option model. The value portion of the award that is ultimately expected to vest is recognized as compensation on a straight line basis over the requisite service period of the award, which is generally four years.

The following table sets forth the total stock-based compensation expense resulting from stock options included in the consolidated statements of operations in 2006:

Cost of sales	\$	53
Research and development		142
Selling, general and administrative		356
Stock-based compensation expense before income taxes		551
Income tax benefit		--
Total stock-based compensation expense after income taxes	\$	551

Cash proceeds from the exercise of stock options in 2006 were \$113. There were immaterial cash proceeds from the exercise of stock in 2005 and 2004. No income tax benefit was realized from stock option exercises for 2006, 2005 and 2004. In accordance with SFAS 123R, the Company presents excess tax benefits from the exercise of stock options, if any, as financing cash flows rather than operating cash flows.

Prior to the adoption of SFAS 123R, the Company applied SFAS 123, amended by SFAS No. 148, which allowed companies to apply the existing accounting rules under APB 25, and related Interpretations. In general, as the exercise price of options granted under these plans was equal to the market price of the underlying common stock on the grant date, no stock-based employee compensation cost was recognized in the Company's net income (loss). As required by SFAS 148 prior to the adoption of SFAS 123R, the Company provided pro forma net income (loss) and pro forma net income (loss) per common share disclosures for stock-based awards, as if the fair-value-based method defined in SFAS 123 had been applied.

Table of Contents

The following table illustrates the effect on net loss and net loss per share if the Company had applied the fair value recognition provisions of SFAS 123 and SFAS 148 to stock-based employee compensation:

	Years Ended December 31,	
	2005	2004
Net income (loss) attributable to common stockholders		
As reported	\$ 2,830	\$ (185)
Add: Stock-based employee compensation expense included in reported net income (loss), net of related tax effects	45	--
Deduct: Total stock-based employee compensation determined under fair value based method for all awards, net of related tax effects	(686)	(693)
Pro forma net income (loss)	\$ 2,189	\$ (878)
Net income (loss) per share:		
As reported - basic.	\$ 0.11	\$ (0.01)
As reported - diluted	\$ 0.10	\$ (0.01)
Pro forma - basic	\$ 0.08	\$ (0.06)
Pro forma - diluted	\$ 0.08	\$ (0.06)

The Company has a stock-based compensation program that provides its Board of Directors broad discretion in creating employee equity incentives. The Company has granted stock options under various option plans and agreements in the past and currently grants stock options under the 1997 Stock Incentive Plan and the 1998 Stock Option Plan for employees, board members and consultants. The Board of Directors adopted the 1997 and 1998 Stock Option Plans on May 12, 1997 and August 6, 1998, respectively. The Compensation Committee of the Board of Directors administers the plans and agreements. The exercise price of options granted under the 1997 and 1998 plans must be at least 85% of the fair market value of the stock at the date of grant. Options granted under the 1998 plan prior to October 2004 generally vest at a rate of 25% per year, are non-transferable and expire over terms not exceeding ten years from the date of grant or three months after the optionee terminates his relationship with the Company. Options granted under the 1997 plan prior to October 2004 generally vest at a rate of 25% per year, are non-transferable and expire over terms not exceeding ten years from the date of grant or eighteen months after the optionee terminates his relationship with the Company. Grants from and after October 2004 until April 2006 under both plans vest at a rate of 25% after six months and then evenly monthly thereafter for the remaining 42 months. Grants from and after April 2006 under both plans vest at a rate of 25% per year on each anniversary of the grant date.

As of December 31, 2006, there were 2,080 shares of common stock available for grant under the two stock option plans.

The activity under the option plans, combined, was as follows:

	Options	Range of Exercise Price	Weighted Average Exercise Price
Options outstanding at January 1, 2004	2,087	\$ 1.56 - \$11.50	\$ 4.39
Granted Adjustments	300	\$ 0.88 - \$0.88	0.88
Granted	2,379	\$ 0.50 - \$1.81	0.95

Edgar Filing: SOUTHWALL TECHNOLOGIES INC /DE/ - Form 10-K

Exercised	--	--	--

Table of Contents

The fair value of stock-based awards was estimated using the Black-Scholes model with the following weighted-average assumptions for 2006, 2005 and 2004:

	2006	2005	2004
Expected life (in years)	4.3	2.17	1.7
Risk-free interest rate	4.80%	4.20%	2.90%
Volatility	109%	117%	116%
Dividend	n/a	n/a	n/a
Weighted-average fair value at grant date	.37	.46	.54

The Company's computation of expected volatility for 2006 is based on historical volatility. The Company's computation of expected life is based on historical exercise patterns. The interest rate for periods within the expected life of the award is based on the U.S. Treasury yield in effect at the time of grant. We have not issued or declared any dividends on our common stock.

Additional information regarding options outstanding, exercisable and expected to vest as of December 31, 2006 is as follows:

	Shares	Weighted-Average Exercise Price	Weighted-Average Remaining Contractual Term (in years)	Aggregate Intrinsic Value
Outstanding at December 31, 2006	5,837	\$ 1.28	7.43	\$ 16
Vested and expected to vest at December 31, 2006	5,194	\$ 1.35	7.23	\$ 14
Exercisable at December 31, 2006	3,403	\$ 1.65	6.40	\$ 0

The aggregate intrinsic value in the table above represents the total pretax intrinsic value (i.e., the difference between Southwall's closing stock price on the last trading day of fiscal 2006 and the exercise price, times the number of shares) that would have been received by the option holders had all option holders exercised their options on December 31, 2006. This amount changes based on the fair market value of Southwall's stock. Total intrinsic value of options exercised was immaterial for 2006, 2005 and 2004.

As of December 31, 2006, \$0.5 million of total recognized compensation cost related to stock options, net of forfeitures, was expected to be recognized over a weighted-average period of approximately 1.39 years.

The following table summarizes information about stock options outstanding at December 31, 2006:

Range of Exercise Prices	Number Out-standing	Options Outstanding		Options Exercisable	
		Weighted Average Remaining Contractual Life (years)	Weighted Average Exercise Price	Number Exercisable	Weighted Average Exercise Price
\$ 0.38 -- \$0.41	318	9.70	\$ 0.41	5	\$ 0.41
\$ 0.50 -- \$0.50	972	7.53	0.50	895	0.50

Edgar Filing: SOUTHWALL TECHNOLOGIES INC /DE/ - Form 10-K

\$ 0.54 -- \$0.54	100	9.85	0.54	0	0.00
\$ 0.58 -- \$0.58	1,025	8.94	0.58	430	0.58
\$ 0.62 -- \$0.71	876	9.31	0.68	118	0.68
\$ 0.73 -- \$0.98	599	7.37	0.84	398	0.86
\$ 1.05 -- \$1.22	638	7.60	1.18	348	1.17

\$ 9.90 -- \$9.90	36	2.32	9.90	36	9.90
\$ 0.38 -- \$9.90	5,837			3,403	

68

Table of Contents*Employee Stock Purchase Plan*

In March 1997, the Company adopted the 1997 Employee Stock Purchase Plan ("the 1997 Plan"). Employees, subject to certain limitations, may purchase shares at 85% of the lower of the fair market value of the Common Stock at the beginning of the six-month offering period, or the last day of the purchase period. During 2006, 2005 and 2004, 13, 13 and 7 shares, respectively, were sold under the 1997 Plan. At December 31, 2006, there were 1,190 shares available for issuance under the 1997 Plan.

Restructuring costs.

In December 2002, we implemented a reduction in force at our Palo Alto location and elected to vacate certain buildings in Palo Alto. As a result of these actions, we incurred a restructuring charge of \$2,624 in 2002 relating to employee severance packages and the remaining rents due on excess facilities in Palo Alto that we no longer occupy. In 2003, we recorded a credit to operating expenses of \$65 as a result of modifications to the severance packages of certain employees. In 2006, we incurred a restructuring charge of \$915 relating to the closure of the Palo Alto manufacturing facility and the related severance and incentive payout to terminated employees. A manufacturing asset was also decommissioned in 2006.

Table of Contents

The following tables set forth the beginning and ending liability balances relating to the above described restructuring activities as well as activity during 2006, 2005 and 2004:

	Workforce Reduction	Facilities Related	Total
Balance at January 1, 2004	\$ --	\$ 1,569	\$ 1,569
Provisions	--	--	--
Adjustment to reserve	--	(926)	(926)
Cash payments	--	(369)	(369)
Balance at December 31, 2004	\$ --	\$ 274	\$ 274
Provisions	--	--	--
Adjustment to reserve	--	--	--
Cash payments	--	(75)	(75)
Balance at December 31, 2005	\$ --	\$ 199	\$ 199
Provisions	375	812	1,187
Adjustment to reserve	(7)	(265)	(272)
Cash payments	(349)	(644)	(993)
Balance at December 31, 2006	\$ 19	\$ 102	\$ 121

At December 31, 2006, \$121 was included in other accrued liabilities in the accompanying consolidated balance sheet.

Guarantees.

The Company establishes a reserve for sales returns and warranties for specifically identified, as well as, anticipated sales return and warranty claims based on experience. As of December 31, 2005 our reserve for sales returns and warranties was as follows:

	Balance at December 31,2004	Provision	Utilized	Balance at December 31,2005
Accrued sales returns and warranties	\$ 2,701	\$ 720	\$ (1,865)	\$ 1,556

As of December 31, 2006, our reserve for sales returns and warranties was as follows:

	Balance at December 31,2005	Provision	Utilized	Balance at December 31,2006
Accrued sales returns and warranties	\$ 1,556	\$ 603	\$ (744)	\$ 1,415

These amounts are included in other accrued liabilities in the accompanying consolidated balance sheets.

Table of Contents

Indemnification obligations.

The Company's By-Laws require it to indemnify its officers and directors, as well as those who act as directors and officers of other entities, against expenses, judgments, fines, settlements and other amounts actually and reasonably incurred in connection with any proceedings arising out of their services to the Company. The indemnification obligations are more fully described in the Company's By-Laws. The Company purchases insurance to cover claims made against its directors and officers. Since a maximum obligation is not explicitly stated in the Company's By-Laws and will depend on the facts and circumstances that arise out of any future claims, the overall maximum amount of the obligations cannot be reasonably estimated. Historically, the Company has not made payments related to these indemnifications.

As is customary in the Company's industry and as provided for in local law in the U.S. and other jurisdictions, many of the Company's standard contracts provide remedies to customers and other third parties with whom the Company enters into contracts, such as defense, settlement, or payment of judgment for intellectual property claims related to the use of its products. From time to time, the Company indemnifies customers, as well as suppliers, contractors, lessors, lessees, and others with whom it enters into contracts, against combinations of loss, expense, or liability arising from various triggering events related to the sale and the use of the Company's products and services, the use of their goods and services, the use of facilities and state of Company-owned facilities, and other matters covered by such contracts, usually up to a specified maximum amount. In addition, from time to time, the Company sometimes also provides protection to these parties against claims related to undiscovered liabilities, additional product liability, or environmental obligations. To date, claims made under such indemnifications have been insignificant.

NOTE 4 - FINANCING AGREEMENTS

On December 18, 2003, the Company entered into definitive investment agreements for a new bank loan guarantee and equity-financing package of up to \$7,500 with Needham, affiliates of the Investors and PBF. The agreements enabled the Company to receive up to \$3,000 in new borrowings under its line of credit facility with PBF, supported by guarantees provided by Needham, in two separate allotments of \$2,250 and \$750; and to receive \$4,500 from the issuance of equity in two separate tranches of \$1,500 and \$3,000. The new borrowings and the purchase of each equity tranche were subject to certain conditions, including, among other things, the receipt of concessions by the Company from creditors and landlords, the completion of certain restructuring actions and the achievement of cash flow break-even at quarterly revenue levels below those of third quarter 2003.

Needham provided the \$2,250 and \$750 guarantees on December 18, 2003 and January 15, 2004, respectively. In exchange for the guarantees the Company issued two allotments of warrants, both for 941 shares of common stock, on the date of the guarantees (See Note 9 - Warrants).

On February 20, 2004, the parties amended and restated the investment agreement to provide that the Company would issue and sell to the Investors an aggregate of \$4,500 of convertible notes in one tranche instead of Series A convertible preferred shares in two separate tranches. The convertible notes were convertible into Series A convertible preferred stock, which is convertible into common stock. In connection with the convertible notes, the Company issued warrants for 1,694 shares of common stock.

On November 4, 2004, Needham and its Affiliates received a total of 9,155 shares of the Company's common stock upon exercise of the warrants. In exercising the warrants, the Needham entities elected to use a "cashless exercise option" in which 99 of the shares underlying the warrants were surrendered in lieu of paying the exercise price in cash. The warrants were originally exercisable for 9,254 shares of the Company's common stock at an exercise price was \$0.01 per share of common stock. The value of the 99 shares of common stock surrendered was based upon the average trading price on November 3, 2004 of the Company's common stock on the Over-the-Counter Bulletin Board

Market.

71

Table of Contents

On November 24, 2004, Dolphin exercised warrants to purchase a total of 4,627 shares of the Company's common stock. The exercise price was \$0.01 per share of common stock. Dolphin paid \$46 in cash as the exercise price.

On December 31, 2004, Needham and its Affiliates and Dolphin elected to convert all outstanding principal of, and accrued but unpaid interest on, their secured convertible promissory notes of the Company into shares of the Company's Series A 10% Cumulative Preferred Stock. The Convertible Notes by their terms were convertible at the option of the holders into Series A Stock at a rate of one share for each \$1.00 of principal or interest converted. The aggregate principal amount of the Convertible Notes converted by the Note Holders was \$4,500 and interest accrued thereon as of the time of conversion was \$393. The aggregate number of shares of Series A Stock issued as a result of the conversion was 4,893. In particular, Needham and its Affiliates received 3,262 shares; and, Dolphin received 1,631 shares.

The Series A Shares have a stated value of \$1.00 per share and are entitled to cumulative dividends of 10% per year, payable at the discretion of the Company's board of directors. Each share of Series A Stock is convertible at any time at the option of the holder into a number of shares of common stock equal to the sum of its stated value plus any accumulated but unpaid dividends, divided by the conversion price of the Series A Shares. The conversion price of the Series A Shares is \$1.00 per share and is subject to adjustment in the event of any stock dividend, stock split, reverse stock split or combination affecting such shares. The Series A Shares also have anti-dilution protection that adjusts the conversion price downwards using a weighted-average calculation in the event Southwall issues certain additional securities at a price per share less than the closing price per share of the common stock. Each share of Series A Stock is convertible into one share of common stock (such conversion rate is subject to adjustment upon certain events).

So long as any Series A Shares are outstanding, unless all accrued dividends have been paid, the Company is generally prohibited from taking certain actions. Except for certain matters with respect to which the approval of the holders of a majority of the Series A Shares voting separately as a class is required, the holders of the Series A Stock have no voting rights. Upon a liquidation or dissolution of the Company (and for these purposes a sale of all or substantially all of the Company's assets or the acquisition of the Company by another entity are considered liquidation events), the holders of the Series A Stock are entitled to be paid a liquidation preference equal to \$1.00 per share plus accumulated but unpaid dividends, out of assets legally available for distribution to stockholders. As of December 31, 2006, \$979 has been accrued in dividends and is included in other accrued liabilities in the accompanying consolidated balance sheet.

Material Terms of the Series A Shares

Our Series A shares have the following terms:

.Dividends. Each of the Series A shares have a stated value of \$1.00 and are entitled to a cumulative dividend of 10% per year, payable at the discretion of the Board of Directors. Dividends on the Series A shares accrue daily commencing on the date of issuance and are deemed to accrue whether or not earned or declared and whether or not there are profits, surplus or other funds legally available for the payment of dividends. Accumulated dividends, when and if declared by the Board, will be paid in cash.

.Restrictions. So long as any Series A shares are outstanding, unless all accrued dividends on all Series A shares have been paid, we are prohibited from taking certain actions, including redeeming or purchasing shares of our common stock and paying dividends on our common stock.
