

CHEMICAL & MINING CO OF CHILE INC
Form 6-K
March 18, 2013

UNITED STATES OF AMERICA

SECURITIES AND EXCHANGE COMMISSION

Washington, D.C. 20549

FORM 6-K

REPORT OF FOREIGN ISSUER

PURSUANT TO RULE 13A-16 OR 15D-16

OF THE SECURITIES AND EXCHANGE ACT OF 1934

Includes SQM's consolidated financial statements as of December 31, 2012, 2011, and 2010, together with management's discussion and analysis of financial condition and results of operations and a discussion of its business.

SOCIEDAD QUIMICA Y MINERA DE CHILE S.A.

(Exact name of registrant as specified in its charter)

CHEMICAL AND MINING COMPANY OF CHILE INC.

(Translation of registrant's name into English)

El Trovador 4285, Santiago, Chile (562) 2425-2000

(Address and phone number of principal executive offices)

Indicate by check mark whether the registrant files or will file annual reports under cover of Form 20-F or Form 40-F.

Edgar Filing: CHEMICAL & MINING CO OF CHILE INC - Form 6-K

Form 20-F Form 40-F

Indicate by check mark whether the registrant by furnishing the information contained in this Form is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.

Yes No

If "Yes" is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3-2(b):
82 _____

Management's discussion and analysis of
financial condition and results of operations

Overview of our results of operations

We divide our operations into the production and sale of the following product lines:

- specialty plant nutrients;
- iodine and its derivatives;
- lithium and its derivatives;
- potassium, including potassium chloride and potassium sulfate;
- industrial chemicals, principally industrial nitrates and solar salts; and
- the purchase and sale of other commodity fertilizers for use primarily in Chile.

We sell our products through three primary channels: our own sales offices; a network of distributors; and, in the case of our fertilizer products, through Yara International ASA's (formerly Norsk Hydro ASA) ("Yara") distribution network in countries where its presence and commercial infrastructure are larger than ours. Similarly, in those markets where our presence is larger, both our specialty plant nutrients and Yara's are marketed through our offices.

Factors affecting our results of operations

Our results of operations substantially depend on:

trends in demand for and supply of our products, including global economic conditions, which impact prices and volumes;

- efficient operations of our facilities, particularly as some of them run at production capacity;
- our ability to accomplish our capital expenditures program in a timely manner;
- the levels of our inventories;

trends in the exchange rate between the U.S. dollar and Chilean peso, as a significant portion of the cost of sales is in Chilean pesos, and trends in the exchange rate between the U.S. dollar and the euro, as a significant portion of our sales is denominated in euros; and

- energy, logistics, raw materials, labor and maintenance costs.

Our revenues totaled US\$2,429.2 million during 2012, representing an increase of 13.2% from revenues of US\$2,145.3 million in 2011. Gross margin reached US\$1,028.6 million (42.3% of revenues), 20.3% higher than gross revenues of US\$854.8 million (39.8% of revenues) in 2011. Profit attributable to controlling interests increased by 18.9% to US\$649.2 million in 2012, compared to US\$545.8 million in 2011.

Our sales volumes in the specialty plant nutrition product line in 2012 decreased by 8.1% compared to 2011. The decrease was a result of increased supply in the market and low market growth mainly due to economic uncertainty in Europe, one of the most important markets for the product line. In general, the specialty plant nutrition markets are less volatile than commodity and fertilizer markets, but future improvement in this product line will depend on the behavior of the market for potassium based fertilizers such as potassium chloride. Potassium chloride is an important raw material in the production of potassium nitrate, a specialty fertilizer and, as a result, prices of the two products are related. We feel confident in the future of specialty plant nutrient market as food quality requirements increase, and land and fresh water scarcity impacts some parts of the world. We suspect market growth to be led primarily by potassium nitrate, and we believe we are prepared to meet the growing market demand in the future.

Our sales volumes in the iodine product line decreased by 10.0% in 2012, as a result of new supply by competitors in the market, and as we returned to normal operational inventory. This volume decrease was more than offset by prices that were more than 40% higher than the average prices in this product line during 2011, thus increasing margins in the iodine segment. This increase in average prices in 2012 was attributable to an increase in demand which was met by new supply in 2012, which stabilized average prices at higher levels compared to 2011. We continue to be a world leader in the iodine market, and these special market conditions have created unique opportunities for us. We expect to maintain our efforts to assure that world iodine needs are met in the future.

Our sales volumes in the lithium product line increased by 12% in 2012 compared to 2011. Along with increased sales volumes, we saw increased prices in this product line during 2012 when compared to 2011, resulting in increased margins in this product line by nearly 30%. The increase in sales volumes and prices were principally attributable to stronger demand and higher costs for marginal producers compared to 2011. We believe the lithium market is positioned to grow in the short and long term due to the development of new technologies, as well as strong growth in industrial applications. We expect world lithium production to increase in the near future, as a number of new projects have been announced and have begun procurement.

Our sales volumes in the potassium product line increased by almost 10% in 2012 compared to the prior year, as we took advantage of our developed distribution network. Our average prices in the potassium market remained relatively stable as compared to 2011. In the fourth quarter of 2012, the potassium market saw major contracts close at lower prices than seen earlier in 2012; during the first quarter of 2013, prices have remained stable. We expect market sales volumes to increase during 2013, but we expect that price pressures will have an impact on potassium revenues in the near term.

Our sales volumes in the industrial chemicals product line increased by 52% in 2012 compared to 2011. The increase was driven by new alternative energy projects that utilize industrial-grade sodium and potassium nitrate in solar thermal energy storage. As a result of the uncertain financial situation in Europe and continued slow growth in the United States, the market has seen higher financing costs for projects in Europe and the United States. As a result, we anticipate some project delays which, in turn, we expect will have an impact on short term sales in the industrial chemicals product line. We remain confident in the long-term prospects in the solar thermal energy storage market, and expect to see industrial chemicals sales volumes in 2014 exceed volumes seen in 2013.

Our profit for the fourth quarter of 2012 declined by 10.8% from the comparable period in 2011 and was 14.2% lower than our profit for the third quarter of 2012, due principally to the decline in average prices in the potassium market during the fourth quarter of 2012, which affected our specialty plant nutrients product line and potassium product line, and decreased sales volumes in our iodine product line as a result of new supply by competitors in the market. Although potassium prices have remained stable in 2013 to date at the levels reached during the fourth quarter of 2012, we expect pressure on potassium prices to have an impact on our overall profits during the near term. The effect of the volume decrease in our iodine product line was partially offset by prices that were more than 40% higher for 2012 than the average prices in this product line during 2011. As mentioned above, increased supply entered the market in 2012, and we expect to see additional new supply in 2013.

The following table sets forth our revenues and the percentage accounted for by each of our product lines for each of the years indicated:

| | Year Ended December 31, | | | | | | | |
|--|-------------------------|-----|---------|-----|---------|-----|---------|-----|
| | 2012 | | 2011 | | 2010 | | 2009 | |
| (in millions of U.S. dollars) | US\$ | % | US\$ | % | US\$ | % | US\$ | % |
| Specialty plant nutrients | 675.3 | 28 | 721.7 | 34 | 603.7 | 33 | 527.0 | 37 |
| Iodine and its derivatives | 578.1 | 24 | 454.5 | 21 | 316.3 | 17 | 190.9 | 13 |
| Lithium and its derivatives | 222.2 | 9 | 183.4 | 9 | 150.8 | 8 | 117.8 | 8 |
| Potassium | 605.1 | 25 | 555.7 | 26 | 528.2 | 29 | 399.1 | 28 |
| Industrial chemicals | 245.2 | 10 | 139.5 | 7 | 149.7 | 8 | 115.4 | 8 |
| Other commodity fertilizers ⁽¹⁾ | 103.2 | 4 | 90.5 | 4 | 81.8 | 5 | 88.5 | 6 |
| Total | 2,429.2 | 100 | 2,145.3 | 100 | 1,830.4 | 100 | 1,438.7 | 100 |

(1) Primarily consists of imported fertilizers distributed in Chile.

The following table sets forth certain of our financial information and the percentage of our revenues of such financial information for each of the years indicated:

| (in millions of U.S. dollars) | Year Ended December 31, | | | | | |
|--|-------------------------|-------|-----------|-------|-----------|-------|
| | 2012 | | 2011 | | 2010 | |
| | US\$ | % | US\$ | % | US\$ | % |
| Revenues | 2,429.2 | 100.0 | 2,145.3 | 100.0 | 1,830.4 | 100.0 |
| Cost of sales | (1,400.6) | 57.7 | (1,290.5) | 60.2 | (1,204.4) | 65.8 |
| Gross profit | 1,028.6 | 42.3 | 854.8 | 39.8 | 626.0 | 34.2 |
| Other income | 12.7 | 0.5 | 47.7 | 2.2 | 6.5 | 0.4 |
| Administrative expenses | (106.4) | 4.4 | (91.8) | 4.3 | (78.8) | 4.3 |
| Other expenses | (34.6) | 1.4 | (63.0) | 2.9 | (36.2) | 2.0 |
| Other gains (losses) | 0.7 | — | 5.8 | 0.3 | (7.0) | 0.4 |
| Finance income | 29.1 | 1.2 | 23.2 | 1.1 | 12.9 | 0.7 |
| Finance expenses | (54.1) | 2.2 | 39.3 | 1.8 | (35.0) | 1.9 |
| Equity income of associates and joint ventures accounted for using the equity method | 24.4 | 1.0 | 21.8 | 1.0 | 10.7 | 0.6 |
| Foreign currency exchange differences | (26.8) | 1.1 | (25.3) | 1.2 | (5.8) | 0.3 |
| Income before income tax expense | 873.5 | 36.0 | 733.8 | 34.2 | 493.3 | 27.0 |
| Income tax expense | (216.1) | 8.9 | (179.7) | 8.4 | (106.0) | 5.8 |
| Profit attributable to: | | | | | | |
| Controlling interests | 649.2 | 26.7 | 545.8 | 25.4 | 382.1 | 20.9 |
| Non-controlling interests | 8.2 | 0.3 | 8.4 | 0.4 | 5.1 | 0.3 |
| Profit for the year | 657.4 | 27.1 | 554.1 | 25.8 | 387.3 | 21.2 |

Results of operations—year ended December 31, 2012 compared to year ended December 31, 2011

Revenues

During 2012, we generated total revenues of US\$2,429.2 million, a 13.2% increase compared to US\$2,145.3 million in 2011.

The main factors causing the increase in revenues and the variation in the different product lines are described below.

Specialty plant nutrition

Specialty plant nutrition revenues for 2012 totaled US\$675.3 million, a 6.4% decrease compared to US\$721.7 million in 2011. Set forth below are sales volume data for the specified years by product category in this product line.

| (in Th. MT) | 2012 | 2011 | % Change |
|--|-------|-------|-------------|
| Potassium nitrate and sodium potassium nitrate | 469.3 | 551.1 | (15)% |
| Specialty blends | 197.5 | 189.3 | 4 % |
| Other specialty plant nutrients (*) | 89.0 | 86.7 | 3 % |
| Sodium nitrate | 24.4 | 22.2 | 10 % |

* Includes trading of other specialty fertilizers.

Market supplies of the specialty plant nutrition market increased during 2012, as a significant competitor returned to normal production levels. In general, the specialty plant nutrition markets are less volatile than commodity and fertilizer markets, but future improvement in this product line will depend on the behavior of the market for potassium based fertilizers such as potassium chloride.

Our overall sales volumes in the specialty plant nutrition product line in 2012 decreased compared to 2011. This was a result of increased supply in the market and low market growth due mainly to the financial situation in Europe, one of the most important markets for this product line. Prices within our specialty plant nutrition product line increased by almost 2% in 2012 as compared to 2011.

Iodine and its derivatives

Revenues for iodine and its derivatives during 2012 totaled US\$578.1 million, a 27.2% increase compared to US\$454.5 million in 2011. Set forth below are sales volume data for the specified years.

| (in Th. MT) | 2012 | 2011 | % Change |
|----------------------------|------|------|----------|
| Iodine and its derivatives | 11.0 | 12.2 | (10)% |

Overall market sales volumes of iodine reached new levels in 2012 mainly as a result of increased demand. Strong demand was led primarily by X-ray contrast media and pharmaceutical applications. Increased supply entered the market in 2012, and we expect to see additional new supply in 2013.

Our sales volumes decreased by approximately 10% in 2012, as a result of new market supply, and as we returned to normal operational inventory. These volume decreases were more than offset by prices that were more than 40% higher than average prices during 2011, increasing gross profit in the iodine product line by over 38%.

Lithium and its derivatives

Revenues for lithium and its derivatives totaled US\$222.2 million during 2012, a 21.2% increase compared to US\$183.4 million in 2011. Set forth below are sales volume data for the specified years.

| (in Th. MT) | 2012 | 2011 | % Change | |
|-----------------------------|------|------|-------------|---|
| Lithium and its derivatives | 45.7 | 40.7 | 12 | % |

The lithium market continued to grow in 2012, primarily due to growth in the rechargeable battery and lubricating grease markets, as has been the trend in recent years.

Our sales volumes in the lithium segment increased by 12% in 2012, as compared to 2011. We believe we supply over one-third of the world lithium chemical market, and aim to maintain this market share in coming years.

Along with increased volumes, we saw increased prices of approximately 8% in this product line during 2012 as compared to the previous year, increasing our gross margin by approximately 30% as compared with 2011.

We believe we are the lowest cost producer of lithium in the world. We produce lithium as a by-product of potassium chloride, which gives us a unique competitive advantage.

Potassium

Potassium revenues for 2012 totaled US\$605.1 million, an 8.9% increase as compared to US\$555.7 million in 2011. Set forth below are sales volume data for the specified years.

| (in Th. MT) | 2012 | 2011 | % Change | |
|--|---------|---------|----------|---|
| Potassium chloride and potassium sulfate | 1,209.5 | 1,103.4 | 10 | % |

We estimate that market sales volumes of potassium chloride decreased by 12% in 2012 as compared to 2011. Despite favorable economic conditions of relevant crops, demand was mainly affected by economic uncertainty in Europe and the behavior of influential buyers in China and India.

We increased our sales volumes in this product line approximately 10% compared to 2011, as we took advantage of our developed distribution network. Average prices in the potassium market remained relatively stable as compared to 2011. In the fourth quarter of 2012, the potassium market saw major contracts close at lower prices than seen earlier in 2012; during the first quarter of 2013, prices have remained stable.

Industrial chemicals

Industrial chemicals revenues for 2012 totaled US\$245.2 million, a 75.8% increase as compared to US\$139.5 million in 2011. Set forth below are sales volume data for the specified years by product category.

| (in Th. MT) | 2012 | 2011 | % Change | |
|---------------------|-------|-------|----------|----|
| Industrial nitrates | 277.7 | 181.2 | 53 | % |
| Boric acid | 1.8 | 2.4 | (23) |)% |

Industrial chemical demand for traditional applications such as detergents and glass has remained relatively stable as compared to 2011.

New alternative energy projects that utilize industrial-grade sodium and potassium nitrate in solar thermal energy storage had a positive impact on our 2012 industrial chemicals volumes, which increased by over 50% as compared to 2011.

Prices for industrial chemicals increased by 15%, mainly because of the product mix, increasing our gross margins by approximately 48%.

Other products and services

Revenues from sales of other commodity fertilizers and other products totaled US\$103.2 million during 2012, a 14.0% increase compared to US\$90.5 million in 2011.

Cost of sales

During 2012, cost of sales increased by 8.5% to US\$1,400.6 million in 2012 from US\$1,290.5 million in 2011, but remained stable as a percentage of revenues, representing 58% of revenues in 2012 as compared to 60% of revenues in 2011. This increase was principally caused by higher volume production and a stronger Chilean peso. Cost of sales includes, among others, the costs of depreciation and amortization.

Gross profit

Gross profit increased by 20.3% from US\$854.8 million in 2011 to US\$1,028.6 million in 2012, but remained stable as percentage of revenues, representing 42.3% of revenues in 2012 as compared to 39.8% of revenues in 2011. Gross margin was impacted by generally higher average prices in 2012 compared to 2011, led by iodine prices, which increased by 40% on average in 2012 as compared to prices in 2011.

Administrative expenses

Administrative expenses as a percentage of revenues remained stable in 2012 as compared to 2011. Administrative expenses were US\$106.4 million (4.4% of revenues) in 2012 and US\$91.8 million (4.3% of revenues) in 2011.

Other expenses

Other expenses decreased by 45.1% to US\$34.6 million in 2012 from US\$63.0 million in 2011. Other expenses represented 1.4% of revenues in 2012 as compared to 2.9% of revenues in 2011. The decrease in other expenses is attributable to a decrease in expenses accounted for as depreciation of assets no longer in use.

Other gains (losses)

Other gains (losses) decreased by 87.9% to a gain of US\$0.7 million in 2012 from a gain of US\$5.8 million in 2011, but remained stable as a percentage of revenues, representing 0.0% of revenues in 2012 as compared to 0.3% of revenues in 2011. The decrease is attributable in part to a loss in sales of investment in associates and a provision no longer in effect for the suspension of our operations at El Toco mine at the Maria Elena facility.

Finance income

Finance income increased by 25.4% to US\$29.1 million in 2012 from US\$23.2 million in 2011, but remained stable as a percentage of revenues, representing 1.2% of revenues in 2012 as compared to 1.1% of revenues in 2011.

Finance expenses

Finance expenses increased by 37.7% to US\$54.1 million in 2012 from US\$39.3 million in 2011, but remained stable as a percentage of revenues, representing 1.8% of revenues in 2011 as compared to 2.1% of revenues in 2012. The increase in finance expenses was due to a net increase in indebtedness during 2012 and a decrease in capitalized interest related to ongoing capital expenditure projects as compared to 2011.

Equity income of associates and joint ventures accounted for using the equity method

Equity income of associates and joint ventures accounted for using the equity method increased by 11.9% to US\$24.4 million in 2012 from US\$21.8 million in 2011, but remained stable as a percentage of revenues, representing 1.0% of revenues both in 2012 and in 2011.

Foreign currency exchange differences

Losses from foreign currency exchange differences increased by 5.9% to a loss of US\$26.8 million in 2012 from a loss of US\$25.3 million in 2011, but remained stable as a percentage of revenues, representing 1.1% of revenues in 2012 as compared to 1.2% of revenues in 2011. Since most of our operations are in Chile, part of our costs of sales are related to the Chilean peso. Although we have an active hedging program and policy, we are subject to currency fluctuations. During 2012, the Chilean peso appreciated by 7.6% against the U.S. dollar.

Income tax expense

In 2012, income tax expense increased by 20.3% to US\$216.1 million, representing an effective consolidated tax rate of 24.7%, compared to income tax expense of US\$179.7 million in 2011. This increase was a result of an increase in gross profit of 20.3% from 2011 to 2012.

Profit for the year

Profit for the year increased by 18.6% to US\$657.4 million in 2012 from US\$554.1 million in 2011, as a result of the foregoing factors.

Results of operations—year ended December 31, 2011 compared to year ended December 31, 2010

Revenues

During 2011, we generated total revenues of US\$2,145.3 million, a 17.2% increase compared to US\$1,830.4 million in 2010.

The main factors causing the increase in revenues and the variation in the different product lines are described below:

Specialty plant nutrition

Specialty plant nutrition revenues for 2011 totaled US\$721.7 million, a 19.5% increase compared to US\$603.7 million in 2010. Set forth below are sales volume data for the specified years by product category in this product line.

| (in Th. MT) | 2011 | 2010 | % change | |
|--|-------|-------|----------|----|
| Potassium nitrate and sodium potassium nitrate | 551.1 | 534.7 | 3 | % |
| Specialty blends | 189.3 | 176.3 | 7 | % |
| Other specialty plant nutrients(*) | 86.7 | 87.6 | (1) |)% |
| Sodium nitrate | 22.2 | 16.8 | 32 | % |

* Includes trading of other specialty fertilizers.

Market sales volumes of fertilizer showed a significant improvement in 2011 over 2010 levels, and our specialty plant nutrition product line was no exception. The specialty plant nutrition market showed the same upward trend as the potash market. Additionally, tight supply issues in the potassium nitrate market created opportunities to increase sales volumes, and this, coupled with strong growth in demand in potassium, led to increased prices in 2011. North American and European markets were demand drivers during 2011.

Average prices in 2011 increased by 14% over average prices in 2010. We also had improved margins as a result of increased production from the highly efficient facility in Coya Sur.

Iodine and its derivatives

Revenues for iodine and its derivatives during 2011 totaled US\$454.5 million, a 43.7% increase compared to US\$316.3 million in 2010. Set forth below are sales volume data for the specified years.

| (in Th. MT) | 2011 | 2010 | % change | |
|----------------------------|------|------|----------|---|
| Iodine and its derivatives | 12.2 | 11.9 | 3 | % |

Iodine markets surpassed previous records and reached historical levels in 2011. Demand increased in most applications, but specifically in the X-ray contrast media market and for pharmaceutical uses. Weakened supply also had an impact on the iodine markets in 2011, driving spot prices to unprecedented highs. As a result of a strong demand recovery, together with a tightened availability from other suppliers, iodine prices increased substantially during 2011, and SQM saw an increase in average prices for iodine of almost 40%.

We continue to be a world leader in the iodine market, and we were uniquely positioned to take advantage of increased demands in the iodine markets and meet the shortfall in supply in 2011.

Lithium and its derivatives

Revenues for lithium and its derivatives totaled US\$183.4 million during 2011, a 21.6% increase as compared to US\$150.8 million in 2010. Set forth below are sales volume data for the specified years.

| (in Th. MT) | 2011 | 2010 | % change |
|-----------------------------|------|------|----------|
| Lithium and its derivatives | 40.7 | 32.4 | 26 % |

The lithium market continued to grow in 2011, primarily due to growth in the rechargeable battery and lubricating grease markets. Lithium sales exceeded expectations in 2011. Prices in this product line remained relatively stable throughout 2011.

Potassium

Potassium revenues for 2011 totaled US\$555.7 million, a 5.2% increase as compared to US\$528.21 million in 2010. Set forth below are sales volume data for the specified years.

| (in Th. MT) | 2011 | 2010 | % change |
|--|---------|---------|----------|
| Potassium chloride & Potassium Sulfate | 1,103.4 | 1,273.0 | (13)% |

The potassium chloride market continued to be robust in 2011, as farmers continued to be motivated to maximize yields and improve soil productivity through optimal fertilization. Additionally, world demand for commodity products continues to expand as the world population grows and the demand for more and better quality food increases.

Prices in the fertilizer market continued to increase over the course of 2011, and average prices in the potassium product line were 21% higher in 2011 as compared to 2010.

Industrial chemicals

Industrial chemicals revenues for 2011 totaled US\$139.5 million, a 6.8% decrease from US\$149.7 million in 2010. Set forth below are sales volume data for the specified years by product category.

| (in Th. MT) | 2011 | 2010 | % change |
|---------------------|-------|-------|----------|
| Industrial nitrates | 181.2 | 198.9 | (9)% |
| Boric acid | 2.4 | 2.6 | (9)% |

Industrial chemical demand for traditional applications such as explosives, detergents and glass, among others, remained relatively stable in 2011 as compared to 2010. Average prices for industrial chemicals in 2011 saw a slight increase compared to 2010.

Other products and services

Revenues from sales of other commodity fertilizers and other products totaled US\$90.5 million during 2011, a 10.6% increase compared to US\$81.8 million in 2010.

Cost of sales

During 2011, cost of sales increased by 7.1% to US\$1,290.5 in 2011 from from US\$1,204.4 million in 2010, but decreased as a percentage of revenues, representing 60% of revenues in 2011 as compared to 66% of revenues in 2010. This cost of sales increase was mainly caused by higher energy prices and a stronger Chilean peso. Cost of sales includes, among others, the costs of depreciation and amortization.

Gross profit

Gross profit increased by 36.5% from US\$626.0 million in 2010 to US\$854.8 million in 2011. As a percentage of revenues, gross profit increased from 34.2% of revenues in 2010 to 39.8% of revenues in 2011. Gross margin increased mainly as a result of higher average prices of potash (approximately 20%) and iodine (approximately 40%) in 2011 as compared to 2010.

Administrative expenses

Administrative expenses as a percentage of revenues remained unchanged in 2011 as compared to 2010. Administrative expenses were US\$91.8 million in 2011 and US\$78.8 million in 2010, representing 4.3% of revenues in both years.

Other expenses

Other expenses increased by 74.0% to US\$63.0 million in 2011 from US\$36.2 million in 2010. Other expenses represented 2.9% of revenues in 2011 as compared to 2.0% of revenues in 2010. The increase in other expenses is attributable in part to the recognition of depreciation of certain assets that we no longer use.

Other gains (losses)

Other gains (losses) increased to a gain of US\$5.8 million in 2011 from a loss of US\$7.0 million in 2010, but remained stable as a percentage of revenues, representing 0.3% of revenues in 2011 as compared to 0.4% of revenues in 2010. This increase is attributable in part to the provision relating to the temporary suspension of our operations at El Toco mine at the Maria Elena facility.

Finance income

Finance income increased by 79.8% to US\$23.2 million in 2011 from US\$12.9 million in 2010, but remained stable as a percentage of revenues, representing 1.1% of revenues in 2011 as compared to 0.7% of revenues in 2010. The increase was mainly due to an increase in cash and cash equivalents in 2011, together with higher investment yields in Chile in 2011.

Finance expenses

Finance expenses increased by 12.3% to US\$39.3 million in 2011 from US\$35.0 million in 2010, but remained stable as a percentage of revenues, representing 1.8% of revenues in 2011 as compared to 1.9% of revenues in 2010.

Equity income of associates and joint ventures accounted for using the equity method

Equity income of associates and joint ventures accounted for using the equity method increased by 103.7% to US\$21.8 million in 2011 from US\$10.7 million in 2010, but remained relatively stable as a percentage of revenues, representing 1.0% of revenues in 2011 as compared to 0.6% of revenues in 2010.

Foreign currency exchange differences

Losses from foreign currency exchange differences increased to a loss of US\$25.3 million in 2011 from a loss of US\$5.8 million in 2010, partly due to significant depreciations in the euro and South African rand. Although we have an active hedging program and policy, we are still subject to exchange rate fluctuations.

Income tax expense

In 2011, income tax expense increased by 69.5% to US\$179.7 million, representing an effective consolidated tax rate of 24.5%, as compared to income tax expense of US\$106.0 million in 2010. This increase was a result of an increase in the Chilean corporate tax rate from 17% in 2010 to 20% in 2011, as well as an increase in gross profit of 36.5% from 2010 to 2011.

Profit for the year

Profit for the year increased by 43.1% to US\$554.1 million in 2011 from US\$387.3 million in 2010, as a result of the foregoing factors.

Liquidity and capital resources

As of December 31, 2012, we had US\$568.5 million of cash and cash equivalents and time deposits. In addition, as of December 31, 2012, we had unused uncommitted working capital credit lines amounting to US\$530.0 million.

Shareholders' equity increased from US\$1,812.8 million as of December 31, 2011 to US\$2,132.8 million as of December 31, 2012. Our ratio of total liabilities to total equity (including non-controlling interest) on a consolidated basis decreased from 1.08 as of December 31, 2011 to 1.02 as of December 31, 2012.

We evaluate from time to time our cash requirements to fund capital expenditures, dividend payouts and increases in working capital. As debt requirements also depend on the level of accounts receivables and inventories, we cannot accurately determine the amount of debt we will require.

The table below sets forth our cash flows for 2012, 2011, and 2010:

| (in millions of U.S. dollars) | 2012 | 2011 | 2010 |
|------------------------------------|-------|-------|-------|
| Net cash from (used in): | | | |
| Net cash from operating activities | 650.2 | 571.3 | 618.5 |

Edgar Filing: CHEMICAL & MINING CO OF CHILE INC - Form 6-K

| | | | |
|--|---------|---------|---------|
| Net cash used in financing activities | (197.7) | (105.2) | (254.2) |
| Net cash used in investing activities | (562.9) | (516.2) | (236.8) |
| Effects of exchange rate fluctuations on cash and cash equivalents | (10.3) | (29.6) | 21.5 |
| Net increase (decrease) in cash and cash equivalents | (120.6) | (79.7) | 149.0 |

We operate a capital-intensive business that requires significant investments in revenue-generating assets. Our growth strategy has included the purchase of production facilities and equipment and has also included the improvement and expansion of existing facilities. Funds for capital expenditures and working capital requirements have been obtained from net cash from by operating activities, borrowings under credit facilities and issuance of debt securities.

Our capital expenditures, including the purchase of property, plant and equipment, amounted to approximately US\$446.0 million in 2012. For 2013, we expect total capital expenditures of approximately US\$500.0 million, which amount may be increased or decreased based on market conditions. See “Business—Business strategy—Capital expenditure program.”

Our other major use of funds is the payment of dividends. We paid dividends of US\$334.8 million and US\$277.3 million during 2012 and 2011, respectively. Our current dividend policy, as approved by shareholders, is to pay 50% of our profit for each fiscal year in dividends. Under Chilean law, the minimum dividend payout is 30% of profit for each fiscal year.

Financing activities

Our current ratio (current assets divided by current liabilities) was 3.69 as of December 31, 2012. The following table sets forth key information about our outstanding long- and short-term debt as of December 31, 2012.

| Debt Instrument ⁽¹⁾⁽²⁾ | Interest rate | Issue date | Maturity date | Amortization |
|---|---------------|-----------------|---------------|-------------------------------|
| Series O Bond — UF 1.50 million | 3.80 | % Apr. 4, 2012 | Feb. 1, 2033 | Bullet |
| Series H Bond — UF 4.00 million | 4.90 | % Jan. 13, 2009 | Jan. 5, 2030 | Semiannual, beginning in 2019 |

| Bilateral loan — US\$20 million | 1.04 | % Apr. 19, 2012 | Jan. 16, 2013 | Bullet |
| Bilateral loan — US\$20 million | 1.03 | % May 4, 2012 | Feb. 28, 2013 | Bullet |
| Bilateral loan — US\$20 million | 1.90 | % May 15, 2012 | May 10, 2013 | Bullet |
| Bilateral loan — US\$20 million | 1.64 | % Jun. 25, 2012 | Jun. 20, 2013 | Bullet |
| Bilateral loan — US\$20 million | 1.70 | % Jun. 29, 2012 | Jun. 24, 2013 | Bullet |
| Bilateral loan — US\$20 million | 1.09 | % Dec. 3, 2012 | Aug. 30, 2013 | Bullet |

(1) UF- and Ch\$-denominated bonds are fully hedged to U.S. dollars with cross-currency swaps.

(2) Some floating rate bilateral loans are currently hedged to fixed rate loans using interest rate swaps.

(3) On January 16, 2013, we repaid a short term bank loan, in the principal amount of US\$20 million, with a term of nine months and an annual interest rate of approximately LIBOR + 0.72%, and we entered into a short term bank loan, in the principal amount of US\$20 million, with a term of eight months and an annual interest rate of approximately LIBOR + 0.315%.

On February 28, 2013, we repaid a short term bank loan, in the principal amount of US\$20 million, with a term of 10 months and an annual interest rate of approximately LIBOR + 0.72%, and we entered into a short term bank (4) loan, in an amount of US\$20 million with a term of nine months and an annual interest rate of approximately LIBOR 3M + 0.35%.

As of December 31, 2012, we had total debt of US\$1,599 million, compared to total debt of US\$1,398.03 million as of December 31, 2011. Taking into account the effects of financial derivatives, our total debt amounted to US\$1,498.39 million as of December 31, 2012 and US\$1,341.93 million as of December 31, 2011. Of the total debt as of December 31, 2012, US\$152.84 million was short-term debt. All of our UF and Ch\$ local bonds, as of December 31, 2012, were hedged with cross-currency swaps to the U.S. dollar.

The financial covenants related to our debt instruments include: (i) limitations on the ratio of total liabilities to equity (including non-controlling interest) on a consolidated basis, (ii) minimum net worth requirements, (iii) limitations on net financial debt to EBITDA, (iv) limitations on interest indebtedness of operating subsidiaries and (v) minimum production assets. We believe that the terms and conditions of our debt agreements are standard and customary and that we are in compliance in all material respects with such terms and conditions.

The following table sets forth the maturities of our long-term debt by year as of December 31, 2012:

| Maturity⁽¹⁾ (in millions of U.S. dollars) | Amount |
|---|-----------------|
| 2013 | 7.14 |
| 2014 | 300.67 |
| 2015 | 97.14 |
| 2016 | 287.14 |
| 2017 | 194.74 |
| 2018 | 7.14 |
| 2019 and thereafter | 568.92 |
| Total | 1,462.89 |

Only the principal amount has been included. For the UF- and Ch\$-denominated local bonds, the amounts presented reflect the real U.S. dollar obligation as of December 31, 2012, not including the effects of the cross currency swaps that hedge these bonds to the U.S. dollar and which had, as of December 31, 2012, a market value of US\$100.6 million in favor of SQM.

Derivative financial instruments and hedging

We use derivative financial instruments, including foreign currency forwards and options contracts as well as cross currency and interest rate swaps, to mitigate the risks associated with fluctuations in interest and exchange rates. Such derivative financial instruments are initially recognized at fair value as of the date of the derivative contract and are subsequently remeasured at fair value quarterly. Derivatives are recorded as assets when fair value is positive and as liabilities when fair value is negative. Any gain or loss that arises from the changes of the fair value of derivatives during the year that does not qualify for hedge accounting is recorded directly to the statement of income. The fair value of cross currency and interest rate swaps is calculated using market information to estimate their net present values, which later are confirmed with the corresponding counterparty.

Off-balance sheet arrangements

We have not entered into any transactions with unconsolidated entities whereby we have financial guarantees, retained or contingent interests in transferred assets, derivative instruments or other contingent arrangements that would expose us to material continuing risks, contingent liabilities, or any other obligations arising out of a variable interest in an unconsolidated entity that provides financing, liquidity, market risk or credit risk support to us or that engages in leasing, hedging or research and development services with us.

Market risk analysis

We are exposed to market risk from changes in currency exchange rates and interest rates. Through various arrangements described below, we seek to hedge our foreign currency exposures.

For additional information concerning our hedging transactions, see note 9.3 to our audited financial statements included below.

Foreign currency risk

We transact a significant portion of our business in U.S. dollars, and the U.S. dollar is the currency of the primary economic environment in which we operate. In addition, the U.S. dollar is our functional currency for financial statement reporting purposes. A significant portion of our costs, however, is related to the Chilean peso. Therefore, an increase or decrease in the exchange rate between the Chilean peso and the U.S. dollar would affect our costs of production. As of December 31, 2012, the Chilean peso exchange rate was Ch\$479.96 per U.S. dollar, while as of December 31, 2011, the Chilean peso exchange rate was Ch\$519.20 per U.S. dollar. As of March 15, 2013, the Observed Exchange Rate was Ch\$471.10 per U.S. dollar.

As an international company operating in several other countries, we also transact business and have assets and liabilities in other non-U.S. dollar currencies, such as, among others, the euro, the South African rand, the Mexican peso, the Chinese yuan and the Brazilian real. As a result, fluctuations in the exchange rates of such foreign currencies to the U.S. dollar may materially affect our business, financial condition and results of operations.

Interest rate risk

We have outstanding short- and long-term debt that bears interest based on LIBOR plus a spread. Since we are currently hedging only a portion of these liabilities into fixed rates, we are exposed to interest rate risk relating to LIBOR fluctuations. As of December 31, 2012, approximately 21% our financial debt had LIBOR-based pricing that was not hedged into fixed rates. A significant increase in the rate could materially impact our financial condition and results of operations.

Critical accounting policies

Critical accounting policies are defined as those that are reflective of significant judgments and uncertainties, which would potentially result in materially different results under different assumptions and conditions. For more information regarding our critical accounting policies, see note 3 to our see not 3 to our audited consolidated financial statements included below.

We believe that our critical accounting policies applied in the preparation of our audited consolidated financial statements are limited to those described below. It should be noted that in many cases, IFRS specifically dictates the accounting treatment of a particular transaction, limiting management's judgment in their application. There are also areas in which management's judgment in selecting available alternatives would not produce materially different results.

Trade and other accounts receivable

Trade and other accounts receivable relate to non-derivative financial assets with fixed payments that can be determined and are not quoted in any active market. These arise from sales operations involving the products and/or services that we sell directly to our customers that are not within the following categories:

- those which we have the intention of selling immediately in the near future and which are held-for-sale;

- those designated at their initial recognition as available-for-sale; and

those through which the holder does not intend to partially recover substantially its entire investment for reasons other than credit impairment and therefore must be classified as available-for-sale.

These assets are initially recognized at their fair value (which is equivalent to their face value, discounting implicit interest for installment sales) and subsequently at amortized cost according to the effective interest rate method less a provision for impairment loss. When the face value of the account receivable does not significantly differ from its fair value, it is recognized at face value. An allowance for impairment loss is established for trade accounts receivable when there is objective evidence that we will not be able to collect all the amounts owed to us according to the original terms of accounts receivable.

Implicit interest in installment sales is recognized as interest income when interest is accrued over the term of the sale.

Income tax

Corporate income tax for the year is determined as the aggregate of current taxes from all of the consolidated companies. Current taxes are calculated on the basis of the tax laws enacted or substantively enacted as of the date of our statements of financial position in the countries in which we and our subsidiaries operate and generate taxable income.

Deferred tax is recognized using the liability method on temporary differences arising between the tax basis for assets and liabilities and their carrying amounts in our audited consolidated financial statements. Deferred income taxes are calculated using the tax rates expected to be applicable when the assets are realized or the liabilities are settled.

In conformity with current Chilean tax regulations, the provision for corporate income tax and taxes on mining activity is recognized on an accrual basis, presenting the net balances of accumulated monthly tax provisional payments for the fiscal period and credits associated with it. The balances of these accounts are presented in current income taxes recoverable or current taxes payable, as applicable.

Tax on companies and variations in deferred tax assets or liabilities that are not the result of business combinations are recorded in income statement accounts or net shareholders' equity accounts in our consolidated statements of financial position, depending on the origin of the gains or losses which have generated them.

At year end, the carrying value of deferred tax assets has been reviewed and reduced for as long as it is possible for there to be no sufficient taxable income to allow the recovery of all or a portion of the deferred tax asset. Likewise, at the date of the statement of financial position, deferred tax assets not recognized are revalued and recognized as long as it has become possible that future taxable income will allow the recovery of the deferred tax asset.

With respect to deductible temporary differences associated with investments in subsidiaries, associated companies and interests in joint ventures, deferred tax assets are recognized solely provided that there is a possibility that the temporary differences will be reversed in the near future and that there will be taxable income with which they may be used.

The deferred income tax related to entries directly recognized in equity is recognized with an effect on equity and not with an effect on profit or loss.

Deferred tax assets and liabilities are offset if there is a legally receivable right of offsetting tax assets against tax liabilities and the deferred tax is related to the same tax entity and authority.

Inventory

We state inventory for the lower of cost and net realizable value. The method used to determine the cost of inventory is weighted average cost. The cost of finished products and products-in-progress includes direct costs of materials and, as applicable, labor costs, indirect costs incurred to transform raw materials into finished products and general expenses incurred in carrying inventory to their current location and conditions.

The net realizable value represents the estimate of the sales price less all finishing estimated costs and costs that will be incurred in sales and distribution processes. Commercial discounts, rebates obtained and other similar entries are deducted in the determination of the cost. We conduct an evaluation of the net realizable value of inventory at the end of each year, recording a provision with a charge to income when circumstances warrant. When the circumstances that previously gave rise to the reserve cease to exist, or when there is clear evidence of an increase in the net realizable value due to a change in economic circumstances or prices of main raw materials, the estimate made previously is modified. The valuation of obsolete, impaired or slow-moving products relates to their estimated net realizable value.

Provisions on our inventory have been made based on a technical study which covers the different variables affecting products in stock (density, humidity, among others).

Raw materials, supplies and materials are recorded at the lower of acquisition cost or market value. Acquisition cost is calculated according to the annual average price method.

Obligations related to staff severance indemnities and pension commitments

Our obligations with respect to our employees are established in collective bargaining agreements and individual employment contracts. In the case of our employees in the United States, our obligations are established through a pension plan, which was terminated in 2002 (see note 3.11 to our audited financial statements included below).

These obligations are valued using the actuarial calculation, which considers such hypotheses as the mortality rate, employee turnover, interest rates, retirement dates, effects related to increases in employees' salaries, as well as the effects on variations in services derived from variations in the inflation rate.

Actuarial losses and gains that may be generated by variations in previously defined obligations are directly recorded in profit or loss for the year.

Actuarial losses and gains that have their origin in deviations between the estimate and the actual behavior of actuarial hypotheses or in the reformulation of established actuarial hypotheses are recorded in equity.

The discount rate used by us for calculating the obligation was 6% for the periods ended as of December 31, 2012.

Our subsidiary SQM North America Corp. has established pension plans for its retired employees that are calculated by measuring the projected obligation of International Accounting Standards ("IAS") using a net salary progressive rate net of adjustments to inflation, mortality and turnover assumptions, deducting the resulting amounts at present value using a 5.0% interest rate for 2012. The net balance of this obligation is presented in the line item called Noncurrent Employee Benefit Provisions.

Mining development costs

Mine exploration costs and stripping costs to maintain production of mineral resources extracted from operating mines are considered variable production costs and are included in the cost of inventory produced during the period. Mine development costs at new mines, and major development costs at operating mines outside existing areas under extraction that are expected to benefit future production, are capitalized under "other long-term assets" and amortized using a units-of-production method over the associated proven and probable reserves. We determine our proven and probable reserves based on drilling, brine sampling and geostatistical reservoir modeling in order to estimate mineral volume and composition.

All other mine exploration costs, including expenses related to low grade mineral resources rendering reserves that are not economically exploitable, are charged to the statement of income in the period in which they are incurred.

Asset value impairment

We assess on an annual basis any impairment on the amount of buildings, plant and equipment, intangible assets, goodwill and investments accounted for using the equity method of accounting in accordance with IAS 36 “Impairment of Assets.” Assets to which this method applies are:

- investments recognized using the equity method of accounting;

- property, plant and equipment;

intangible assets; and

goodwill.

Assets are reviewed for impairment as to the existence of any indication that the carrying value is lower than the recoverable amount. If such an indication exists, the asset recoverable amount is calculated in order to determine the extent of the impairment, if any. In the event that the asset does not generate any cash flows independent from other assets, we determine the recoverable amount of the cash generating unit to which this asset belongs according to the corresponding business segment (specialty plant nutrients, iodine and derivatives, lithium and derivatives, industrial chemicals, potassium and other products and services.)

We conduct impairment tests on intangible assets and goodwill with indefinite useful lives on an annual basis and every time there is indication of impairment. If the recoverable value of an asset is estimated at an amount lower than its carrying value, the latter decreases to its recoverable amount.

Financial derivatives and hedging transactions

Derivatives are recognized initially at fair value at the date in which the derivatives contract has been signed and subsequently they are valued at fair value at each period end. The method for recognizing the resulting loss or gain depends on whether the derivative has been designated as an accounting hedging instrument and if so, the type of hedging, which may be:

fair value hedge of assets and liabilities recognized (fair value hedges); or

hedging of a single risk associated with an asset or liability recognized or a highly possible foreseen transaction (cash flow hedge).

At the beginning of the transaction, we document the relationship between hedging instruments and those entries hedged, as well as their objectives for risk management purposes and the strategy to conduct different hedging operations.

We also document our evaluation both at the beginning and the end of each period of whether derivatives used in hedging transactions are highly effective to offset changes in the fair value or in cash flows of hedged entries.

The fair value of derivative instruments used for hedging purposes is shown in note 9.3 to our audited financial statements included below.

Non-hedge instruments are classified as current assets or liabilities, and the change in their fair value is recognized directly in profit or loss.

Fair value hedge

The change in the fair value of a derivative is recognized with a debit or credit to profit or loss, as applicable. The change in the fair value of the hedged entry attributable to hedged risk is recognized as part of the carrying value of the hedged entry and is also recognized with a debit or credit to profit or loss.

For fair value hedging related to items recorded at amortized cost, the adjustment of the fair value is amortized against income on the remaining year to its expiration. Any adjustment to the carrying value of a hedged financial instrument for which the effective rate is used is amortized with a debit or credit to profit or loss at its fair value attributable to the risk being covered.

If the hedged entry no longer meets the criteria for hedge accounting, the fair value not amortized is immediately recognized with a debit or credit to profit or loss.

Cash flow hedge

The effective portion of gains or losses from the hedging instrument is initially recognized as “other revenue” with a debit or credit to other comprehensive income whereas any ineffective portion is immediately recognized with a debit or credit to profit or loss, as applicable.

Amounts accumulated in equity are transferred to profit or loss when the hedged transaction affects income for the period, such as when the hedged interest income or expense is recognized when a forecasted sale occurs. When the hedged item is the cost of a non-financial asset or liability, amounts taken to equity are transferred to the initial carrying value of the non-financial asset or liability.

Should the expected firm transaction or commitment no longer be expected to occur, the amounts previously recognized other comprehensive income are transferred to income. If a hedging instrument expires, is sold, finished, and exercised without any replacement, or if a rollover is performed or if its designation as hedging is revoked, the amounts previously recognized in equity are maintained in equity until the expected firm transaction or commitment occurs.

Business

Business overview

We believe that we are the world's largest producer of potassium nitrate, iodine and lithium chemicals. We also produce specialty plant nutrients, iodine and iodine derivatives, lithium and lithium derivatives, potassium chloride, potassium sulfate and certain industrial chemicals (including industrial nitrates and solar salt). Our products are sold in more than 110 countries through our worldwide distribution network, with 89% of our sales in 2012 derived from countries outside Chile.

Our products are mainly derived from mineral deposits found in northern Chile. We mine and process caliche ore and brine deposits. The caliche ore in northern Chile contains the only known nitrate and iodine deposits in the world and is the world's largest commercially exploited source of natural nitrates. The brine deposits of the Salar de Atacama, a salt-encrusted depression in the Atacama desert in northern Chile, contain high concentrations of lithium and potassium as well as significant concentrations of sulfate and boron.

From our caliche ore deposits, we produce a wide range of nitrate-based products used for specialty plant nutrients and industrial applications, as well as iodine and iodine derivatives. At the Salar de Atacama, we extract brines rich in potassium, lithium, sulfate and boron in order to produce potassium chloride, potassium sulfate, lithium solutions, boric acid and bischofite (magnesium chloride). We produce lithium carbonate and lithium hydroxide at our plant near the city of Antofagasta, Chile, from the solutions brought from the Salar de Atacama. We market all of these products through an established worldwide distribution network.

Our products are divided into six categories: specialty plant nutrients; iodine and its derivatives; lithium and its derivatives; potassium chloride and potassium sulfate; industrial chemicals and other commodity fertilizers. Specialty plant nutrients are premium fertilizers that enable farmers to improve yields and the quality of certain crops. Iodine, lithium and their derivatives are used in human nutrition, pharmaceuticals and other industrial applications. Iodine and its derivatives are mainly used in the X-ray contrast media and biocides industries and in the production of polarizing film, which is an important component in LCD screens. Lithium and its derivatives are mainly used in batteries, greases and frits for production of ceramics. Industrial chemicals have a wide range of applications in certain chemical processes such as the manufacturing of glass, explosives and ceramics, and, more recently, industrial nitrates are being used in solar thermal energy plants as a means for energy storage. Potassium chloride is a commodity fertilizer that is produced and sold by SQM worldwide. In addition, we complement our portfolio of plant nutrients through the buying and selling of other fertilizers for use mainly in Chile.

Edgar Filing: CHEMICAL & MINING CO OF CHILE INC - Form 6-K

For the year ended December 31, 2012, we had revenues of US\$2,429.2 million, gross profit of US\$1,028.6 million and profit attributable to equity holders of SQM of US\$649.2 million. Our market capitalization as of December 31, 2012 was approximately US\$15.0 billion.

The following table sets forth the percentage breakdown of our revenues for the years ended December 31, 2012, 2011, 2010 and 2009 by product line:

| | 2012 | 2011 | 2010 | 2009 |
|-----------------------------|-------|-------|-------|-------|
| Specialty plant nutrients | 28 % | 34 % | 33 % | 37 % |
| Iodine and its derivatives | 24 % | 21 % | 17 % | 13 % |
| Lithium and its derivatives | 9 % | 9 % | 8 % | 8 % |
| Potassium | 25 % | 26 % | 29 % | 28 % |
| Industrial chemicals | 10 % | 7 % | 8 % | 8 % |
| Other commodity fertilizers | 4 % | 4 % | 5 % | 6 % |
| Total | 100 % | 100 % | 100 % | 100 % |

History

We were formed in 1968 through a joint venture between Compañía Salitrera Anglo Lautaro S.A. (“Anglo Lautaro”) and Corporación de Fomento de la Producción (“Corfo”), a Chilean government entity. Three years after our formation, in 1971, Anglo Lautaro sold all of its shares to Corfo, and we were wholly owned by the Chilean government until 1983. In 1983, Corfo began a process of privatization by selling our shares to the public and subsequently listing such shares on the Santiago Stock Exchange. By 1988, all of our shares were publicly owned. Our Series B ADSs have traded on the NYSE under the ticker symbol “SQM” since 1993.

Since our inception, in addition to producing nitrates, we produced iodine, also found in the caliche ore deposits in northern Chile. Between 1994 and 1999, we invested approximately US\$300 million in the development of the Salar de Atacama project in northern Chile. The project involved the construction of a potassium chloride plant, a lithium carbonate plant, a potassium sulfate plant, and a boric acid plant. During 2000 and 2004, we focused on consolidating our business to reduce costs and improve efficiencies.

In 2005, we strengthened our leadership in our core businesses by increasing our capital expenditure program and making advantageous acquisitions and divestitures. During this period we acquired Kemira Emirates Fertiliser Company (“Kefco”) in Dubai and the iodine business of Royal DSM N.V. (“DSM”). We also sold (i) Fertilizantes Olmeca, our Mexican subsidiary, (ii) our butyllithium plant located in Houston, Texas and (iii) our stake in Impronta S.R.L., our Italian subsidiary. These sales allowed us to concentrate our efforts on our core products. In 2007, we completed the construction of a new prilling and granulating plant and, in 2008 we completed our lithium carbonate capacity expansion and began work on the engineering stage of a new potassium nitrate plant.

From 2010 to 2012, we continued to expand our production capacity of potassium products in our operations in the Salar de Atacama. In 2011, we completed the construction of a new potassium nitrate facility in Coya Sur, increasing

our overall production capacity of potassium nitrate by 300,000 metric tons. In addition, in 2008 we entered into a joint venture with Migao Corporation (“Migao”) for the construction of a potassium nitrate plant with a production capacity of 40,000 metric tons per year. This facility was completed and began operating in January 2011.

In the second half of 2011, we effected a corporate reorganization whereby our subsidiary Soquimich European Holding B.V. acquired a 66.6% ownership in Fertilizantes Naturales S.A. (later renamed SQM Iberian S.A.) from Nutrisi Holding N.V. Soquimich European Holding B.V. owned a non-controlling 50% stake in Nutrisi Holding N.V. which was divested following this acquisition in December 2011. The effect of these transactions has been that we indirectly control SQM Iberian S.A. through Soquimich European Holding B.V. SQM Iberian S.A. sells and distributes fertilizers, primarily in Spain.

In 2012, SQM Vitas FZ Company, our joint venture with the French Roullier Group, started the construction of new plants in Brazil (Candeias), Peru and South Africa (Durban) for the production of water soluble fertilizers containing different relative amounts of nitrogen, phosphorus and potassium, and, occasionally, smaller amounts of other chemicals. The Brazilian plant (Candeias Industrial Complex) began operating in March 2012. It has a production capacity of 25,000 metric tons per year, and represented a total investment of US\$10 million.

Business strategy

Our general business strategy is to:

- maintain leadership in specialty plant nutrients, iodine, lithium and industrial nitrates, in terms of production capacity, competitive pricing and the development of new products;

- increase our production capacity of potassium-related fertilizers from the Salar de Atacama;

- maintain our competitiveness through the continued increase in the efficiency of our production processes and cost reduction;

- evaluate and execute acquisitions, joint ventures or commercial alliances which have concrete synergies with our current core businesses or provide sustainable competitive advantages; and

- maintain a solid, conservative financial position and investment grade ratings for our debt securities.

We have identified market demand in each of our major product lines, both within our existing customer base and in new markets, for existing products and for additional products that can be produced from our natural resources. In order to take advantage of these opportunities, we have developed specific strategies for each of our product lines.

Specialty plant nutrition

Our strategy in our specialty plant nutrients business is to: (i) continue expanding our sales of natural nitrates by continuing to leverage the advantages of our specialty products over commodity-type fertilizers; (ii) selectively expand by increasing our sales of higher margin specialty plant nutrients based on potassium and natural nitrates, particularly soluble potassium nitrate and NPK blends; (iii) pursue investment opportunities in complementary

businesses to enhance our product portfolio, increase production, reduce costs, and add value to, and improve the marketing of, our products; (iv) develop new specialty nutrient blends produced in our mixing plants that are strategically located in or near our principal markets, in order to meet specific customer needs; (v) focus primarily on the markets for plant nutrients in soluble and foliar applications in order to establish a leadership position; (vi) further develop our global distribution and marketing system directly and through strategic alliances with other producers and global or local distributors; and (vii) reduce our production costs through improved processes and higher labor productivity so as to compete more effectively.

Iodine and its derivatives

Our strategy in our iodine business is to (i) maintain our leadership in the iodine market by expanding our production capacity in line with demand growth; (ii) encourage demand growth and develop new iodine derivatives, (iii) participate in iodine recycling projects; and (iv) reduce our production costs through improved processes and higher productivity in order to compete more effectively.

Lithium and its derivatives

Our strategy in our lithium business is to (i) maintain our leadership in the lithium industry as a principal producer and distributor of lithium carbonate and lithium hydroxide; (ii) encourage demand growth, (iii) selectively pursue opportunities in the lithium derivatives business by creating new lithium compounds; and (iv) reduce our production costs through improved processes and higher productivity in order to compete more effectively.

Potassium

Our strategy in our potassium business is to significantly increase our production capacity of potassium chloride and potassium sulfate. Our distribution strategy is to (i) offer a portfolio of potassium products, including potassium sulfate, potassium chloride and other fertilizers to our traditional markets; (ii) create flexibility to offer crystalized (standard) or granular (compacted) form products according to market requirements; and (iii) focus on markets where we have logistical advantages.

Industrial chemicals

Our strategy in our industrial chemical business is to (i) maintain our leadership position in the industrial nitrates market, (ii) encourage demand growth in different applications, (iii) become a long-term, reliable supplier for the thermal storage industry; and (iv) reduce our production costs through improved processes and higher productivity in order to compete more effectively.

New business ventures

From time to time we evaluate opportunities to expand in our current core businesses or within new businesses in which we believe we may have sustainable competitive advantages, both within and outside Chile, and we expect to continue to do so in the future. We are currently exploring concessions for certain metallic minerals. If such minerals are found, we may decide to exploit, sell or enter into a joint venture to extract these resources. We may decide to acquire part or all of the equity of, or undertake joint ventures or other transactions with, other companies involved in our businesses or in other businesses. We are also exploring the possibility of acquiring controlling interests in companies that have mining properties in our core business areas, and that are in early stages of development. Consistent with our business strategy, we will continue to evaluate acquisitions, joint ventures and alliances in our core businesses and, depending on all facts and circumstances, may seek to acquire controlling stakes or other interests in companies with mining properties outside of Chile and Latin America, including in other emerging markets.

In addition we are actively conducting exploration operations in various properties we own for copper, gold and other metals deposits and we have already identified several areas in which we are conducting more targeted exploration. Fiel Rosita, a copper-gold deposit located close to the city of Vallenar, is our most advanced prospect. It is located in the same district as other deposits currently being exploited by other companies. We are completing a preliminary economic assessment, expected in 2013, based on which we will decide whether to conduct a pre-feasibility study or to sell part or all of the deposit. We may decide not to move forward with any potential metallic prospects discovered from our exploration operations.

In parallel to our exploration operations, we have entered into memoranda of understanding, option agreements and similar arrangements with third-party mining companies relating to metallic minerals. In all these agreements, we retain the rights on non-metallic minerals such as nitrate, iodine, potassium, lithium and their respective derivatives.

Capital expenditure program

We regularly review different opportunities to improve our production methods, reduce costs, increase production capacity of existing products and develop new products and markets. Additionally, significant capital expenditures are required every year in order to sustain our production capacity. We are focused on developing new products in response to identified customer demand, as well as new products that can be derived as part of our existing production or other products that could fit our long-term development strategy. Our capital expenditures during the past five years were mainly related to the acquisition of new assets, construction of new facilities and renewal of plant and equipment.

Our capital expenditures include investments aimed at sustaining, improving or increasing production levels, including acquisitions and investments in related companies.

Our capital expenditures for the years ended December 31, 2012, 2011 and 2010 were as follows:

| (in millions of U.S. dollars) | 2012 | 2011 | 2010 |
|-------------------------------|-------|-------|-------|
| Capital Expenditures | 446.0 | 501.1 | 336.0 |

During 2010, we had total capital expenditures of US\$336.0 million, primarily relating to:

- continued investment in a new potassium nitrate production facility in Coya Sur;

- investments related to increasing production capacity of potassium-based products at the Salar de Atacama;
- upgrades of our railroad system to handle expanded production capacity; and
- various projects designed to maintain production capacity, increase yields and reduce costs.

During 2011, had total capital expenditures of US\$501.1 million, primarily relating to:

increased production capacity of potassium-based products at the Salar de Atacama, with the continued construction and completion of potassium chloride and granulated potassium chloride facilities at the Salar de Atacama;

- increased capacity and efficiencies at nitrate and iodine facilities;

- optimization of our rail system; and
- various projects designed to maintain production capacity, increase yields and reduce costs.

During 2012, we had total capital expenditures of US\$446.0 million, primarily relating to:

- projects designed to increase capacity and efficiencies at nitrate and iodine facilities in the Tarapacá region;
- continued investments related to increasing production capacity of potassium-based products at the Salar de Atacama, including several projects related to production of finished products; and
- various projects designed to maintain production capacity, increase yields and reduce costs.

We have developed a capital expenditure program for 2013 calling for investments totaling approximately US\$500.0 million, excluding possible mergers, acquisitions or similar arrangements. Among other things, the program will focus on:

- investments related to increasing production of potassium-based products at the Salar de Atacama;
- continued investments related to increased production capacity and efficiencies at our nitrate and iodine facilities;
- optimization of our muriate of potassium facility at the Salar de Atacama; and
- various projects designed to maintain production capacity, increased yields and reduce costs.

Our products

Specialty plant nutrition

We believe we are the world's largest producer of potassium nitrate. We estimate that our sales accounted for approximately 46% of global potassium nitrate sales by volume in 2012. This estimate does not include potassium

nitrate we produced and sold locally in China, only net imports. During 2012, the potassium nitrate market was stable compared to 2011, despite increases in price. Global sales totaled approximately 0.9 million metric tons in 2012. We also produce the following specialty plant nutrients: sodium nitrate, sodium potassium nitrate and specialty blends (containing various combinations of nitrogen, phosphate and potassium and generally known as “NPK blends”).

These specialty plant nutrients have specific characteristics that increase productivity and enhance quality when used on certain crops and soils. Our specialty plant nutrients have significant advantages for certain applications over commodity fertilizers based on nitrogen and potassium, such as urea and potassium chloride.

In particular, our specialty plant nutrients:

- are fully water soluble, allowing their use in hydroponics, fertigation, foliar applications and other advanced agricultural techniques;

- improve the water use efficiency of crops and help conserve water;

- are chlorine-free, which prevents chlorine toxicity in certain crops associated with high levels of chlorine in plant nutrients;

- provide nitrogen in nitric form, thereby allowing crops to absorb nutrients faster than they absorb urea or ammonium-based fertilizers;

- do not release hydrogen after application, thereby avoiding increased soil acidity;

- possess trace elements, which promote disease resistance in plants; and

- are more attractive to customers who prefer products of natural origin.

In 2012, our specialty plant nutrients sales were US\$675.3 million, representing 28% of our total sales for that year and a 6.4% decrease from US\$721.7 million specialty plant nutrients sales in 2011. This increase was a result of higher demand for premium vegetables and fruits, caused by improved economic conditions, which has reinforced the consumption of specialty fertilizers.

Market

The target market for our specialty plant nutrients includes producers of high-value crops such as vegetables, fruits, industrial crops, flowers, cotton and others. Furthermore, we sell specialty plant nutrients to producers of chloride-sensitive crops. Since 1990, the international market for specialty plant nutrients has grown at a faster rate than the international market for commodity-type fertilizers. This is mostly due to: (i) the application of new agricultural technologies such as fertigation and hydroponics, and the increasing use of greenhouses; (ii) the increase in the cost of land and the scarcity of water, which has forced farmers to improve their yields and reduce water use; and (iii) the increase in demand for higher quality crops, such as fruits and vegetables.

Over the last 10 years, the compound annual growth rate for vegetable production per capita was 3.0% while the compound annual growth rate for the world population was only 1.5%.

Worldwide scarcity of water and arable land drives the development of new agricultural techniques to maximize the use of these resources. Irrigation has grown at an average annual rate of 1.5% during last 20 years (a pace equal with population growth). However, micro-irrigation has grown at 10% per year over the same period. Microirrigation systems, which include drip-irrigation and micro-sprinklers, are the most efficient forms of technical irrigation. Global microirrigation acreage is estimated at 10 million hectares, which represents approximately 3% of total worldwide irrigated area. These applications require fully water-soluble plant nutrients. Our nitrate-based specialty plant nutrients provide nitrogen in nitric form, which helps crops absorb these nutrients faster than they absorb urea- or ammonium-based fertilizers, facilitating a more efficient application of nutrients to the plant and thereby increasing the crop's yield and improving its quality.

Our Products

Potassium nitrate, sodium potassium nitrate and specialty blends are higher margin products derived from, or consisting of, sodium nitrate, and they are all produced in crystallized or prilled form. Specialty blends are produced using our own specialty plant nutrients and other components at blending plants operated by us or our affiliates and related companies in Chile, the United States, Mexico, United Arab Emirates, South Africa, Turkey, China, India, Thailand, Brazil and Peru.

The following table shows our sales volumes and revenues from specialty plant nutrients for 2012, 2011, 2010 and 2009.

| Sales Volume (in Th. MT) | 2012 | 2011 | 2010 | 2009 |
|--|-------|-------|-------|-------|
| Potassium nitrate and sodium potassium nitrate. | 469.3 | 551.1 | 534.7 | 392.1 |
| Blended and other specialty plant nutrients ⁽¹⁾ | 286.5 | 276.0 | 263.9 | 256.9 |
| Sodium nitrate | 24.4 | 22.2 | 16.8 | 16.5 |
| Revenues (in millions of U.S. dollars) | 675.3 | 721.7 | 603.7 | 527.0 |

⁽¹⁾ Includes blended and other specialty plant nutrients. It also includes Yara's products sold pursuant to our commercial agreement.

Marketing and customers

In 2012, we sold our specialty plant nutrients in close to 90 countries. During the same year, sales of our specialty plant nutrients were exported to the following regions: 18% to customers in Central and South America (not including Chile), 19% to customers in Chile, 27% to customers in North America, 18% to customers in Europe and 18% to customers in other regions. No single customer represented more than 10% of our specialty plant nutrient sales during 2012, and we estimate that our 10 largest customers accounted in the aggregate for approximately 29% of sales during that period.

The following table shows the geographical break down of our sales for 2012, 2011, 2010 and 2009:

| Sales volume breakdown | 2012 | 2011 | 2010 | 2009 |
|---------------------------|------|------|------|------|
| Central and South America | 18 % | 14 % | 14 % | 22 % |
| North America | 27 % | 24 % | 25 % | 26 % |
| Europe | 18 % | 26 % | 22 % | 22 % |
| Chile | 19 % | 17 % | 16 % | 10 % |

Others 18 % 19 % 23 % 20 %

We sell our specialty plant nutrients products outside Chile mainly through our own worldwide network of representative offices and our distribution affiliates.

We maintain stocks of our specialty plant nutrients in the main markets of the Americas, Asia, Europe, the Middle East and Africa in order to facilitate prompt deliveries to customers. In addition, we sell specialty plant nutrients directly to some of our large customers. Sales are made pursuant to spot purchase orders and short-term contracts.

30

In connection with our marketing efforts, we provide technical and agronomical assistance and support to our customers. By working closely with our customers, we are able to identify new, higher-value-added products and markets. Our specialty plant nutrients products are used on a wide variety of crops, particularly value-added crops, where the use of our products enables our customers to increase yield and command a premium price.

Our customers are located in both the northern and southern hemispheres. Consequently, we believe there are no seasonal or cyclical factors that can materially affect the sales of our specialty plant nutrient products.

Joint ventures and agreements

From time to time we evaluate opportunities to expand in our current core businesses, including our specialty plant nutrients business, or within new businesses in which we believe we may have sustainable competitive advantages, both within and outside Chile. Consistent with our business strategy, we evaluate potential acquisitions, joint ventures and alliances in our core businesses with companies outside of Chile and Latin America, including in emerging markets.

In November 2001, we signed an agreement with Yara. This agreement allows us to make use of Yara's distribution network in countries where its presence and commercial infrastructure are larger than ours. Similarly, in those markets where our presence is larger, both our specialty plant nutrients and Yara's are marketed through our offices. Both parties, however, maintain an active control over the marketing of their own products.

In 2005, SQM acquired 100% of the shares of Kefco, which has a urea phosphate plant located in Dubai. Urea phosphate is a specialty plant nutrient that is used primarily in drip irrigation systems. The plant has an annual production capacity of 30,000 metric tons.

In 2005, SQM and Yara formed a joint venture called MISR Specialty Fertilizers, for the production of tailor-made liquid NPK (nitrogen-phosphate-potassium) fertilizers. The plant is located in Egypt and has a production capacity of 80,000 metric tons per year. We sold our stake in this joint venture in 2012.

In May 2008, we signed a commitment letter for a joint venture with Migao for the production and distribution of specialty plant nutrients in China. In 2009, we signed a shareholders agreement in connection with this joint venture. Through the joint venture, we constructed a potassium nitrate plant with a production capacity of 40,000 metric tons per year. The plant began operating in January 2011. This joint venture will enable us to increase our presence in China, which represents one of the most important and fastest-growing markets for the fertilizer industry.

In May 2009, our subsidiary Soquimich European Holdings entered into an agreement with Coromandel Fertilizers Ltd. to create a joint venture for the production and distribution of water soluble fertilizers in India. The agreement established a 50/50 contribution to the joint venture. As part of the agreement, a new 15,000 metric ton facility was constructed in the city of Kakinada to produce water soluble fertilizers (NPK grades). This new facility required a total investment of approximately US\$2.6 million and began operating in January 2012.

In October 2009, SQM S.A. signed an agreement with Qingdao Star Plant Protection Technology Co., Ltd., resulting in the creation of the joint venture SQM Star, for the production, distribution and sale of soluble NPK specialty plant nutrients in China. The agreement, a 50/50 joint venture, entailed a total investment of US\$2 million for the construction of a new production plant. The plant, located in the city of Jimo, province of Shangdong, is currently operational and has an annual production capacity of 15,000 metric tons.

In December 2009, we signed an agreement with the French Roullier Group to form the joint venture SQM Vitas. This agreement joins two of the largest companies in the businesses of specialty plant nutrients, specialty animal nutrition and professional hygiene. Peru, Brazil and Dubai are the main focus markets of this joint venture. As part of the agreement, our phosphate plant located in Dubai became part of this joint venture. In September 2010, SQM Vitas implemented a new phosphate line that will allow the production of two of the main water soluble phosphorus products in the world: mono ammonium phosphate and urea phosphate.

In the second half of 2011, we effected a corporate reorganization whereby our subsidiary Soquimich European Holding B.V. acquired a 66.6% ownership in Fertilizantes Naturales S.A. (later renamed SQM Iberian S.A.) from Nutrisi Holding N.V. Soquimich European Holding B.V. owned a non-controlling 50% stake in Nutrisi Holding N.V. which was sold following this acquisition. The effect of these transactions has been that we indirectly control SQM Iberian S.A. through Soquimich European Holding B.V. SQM Iberian S.A. sells and distributes fertilizers, primarily in Spain.

In 2012, SQM Vitas started the construction of new plants in Brazil (Candeias), Peru and South Africa (Durban) for the production of water soluble fertilizers containing different relative amounts of nitrogen, phosphorus and potassium, and at times, smaller amounts of other chemicals. The Brazilian plant (Candeias Industrial Complex) began operating in March 2012. It has a production capacity of 25,000 million tons per year, and represented a total investment of US\$10 million.

Between 2010 and 2012, we continued to expand our production capacity of potassium products in our operations in the Salar de Atacama. In 2011, we completed the construction of a new potassium nitrate facility in Coya Sur, increasing our overall production capacity of potassium nitrate by 300,000 metric tons. In addition, as mentioned above, we entered into a joint venture with Migao in 2008 for the construction of a potassium nitrate plant with a production capacity of 40,000 metric tons per year that began operating in January 2011.

Fertilizer sales in Chile

We market specialty plant nutrients in Chile through Soquimich Comercial S.A., either as a standalone product or in blends with other imported products, in particular triple super phosphate (TSP) and diammonium phosphate (DAP).

Soquimich Comercial S.A. sells imported fertilizers to farmers in Chile principally for use in the production of sugar beets, cereals, industrial crops, potatoes, grapes and other fruits. Most of the fertilizers that Soquimich Comercial S.A. imports are purchased on a spot basis from different countries in the world, including China, Mexico and Venezuela.

All contracts and agreements between Soquimich Comercial S.A. and its suppliers of imported fertilizers generally contain standard and customary commercial terms and conditions. During the preceding 10 years, Soquimich Comercial S.A. has experienced no material difficulties in obtaining adequate supplies of such fertilizers at satisfactory prices.

Soquimich Comercial S.A.'s sales of fertilizers represented approximately 30% of total fertilizer sales in Chile during 2012. No single customer represented more than 8% of Soquimich Comercial S.A.'s total fertilizer sales revenues, and its 10 largest customers in total represented less than 43% of its revenues. Revenues generated by Soquimich Comercial S.A. represented 10.6% of our 2012 consolidated revenues. Soquimich Comercial S.A.'s consolidated revenues were approximately US\$256 million and US\$227 million in 2012 and 2011, respectively.

Competition

We believe we are the world's largest producer of sodium and potassium nitrate for agricultural use. Our sodium nitrate products compete indirectly with specialty and commodity-type substitutes, which may be used by some customers instead of sodium nitrate depending on the type of soil and crop to which the product will be applied. Such substitute products include calcium nitrate, ammonium nitrate and calcium ammonium nitrate.

In the potassium nitrate market our largest competitor is Haifa Chemicals Ltd. ("Haifa"), in Israel, which is a subsidiary of Trans Resources International Inc. We estimate that sales of potassium nitrate by Haifa accounted for approximately 34% of total world sales during 2012 (excluding sales by Chinese producers to the domestic Chinese market), compared to our share of the market which accounted for approximately 46% of global potassium nitrate sales by volume for the period.

ACF, another Chilean producer, mainly oriented to iodine production, has produced potassium nitrate from caliche ore and potassium chloride since 2005. Kemapco, a Jordanian producer owned by Arab Potash, produces potassium nitrate in a plant located close to the Port of Aqaba, Jordan. In addition, there are several potassium nitrate producers in China, the largest of which are Wentong and Migao. Most of the Chinese production is consumed by the Chinese domestic market.

The principal means of competition in the sale of potassium nitrate are product quality, customer service, location, logistics, agronomic expertise and price.

In Chile, our products mainly compete with imported fertilizer blends that use calcium ammonium nitrate or potassium magnesium sulfate. Our specialty plant nutrients also compete indirectly with lower-priced synthetic commodity-type fertilizers such as ammonia and urea, which are produced by many producers in a highly price-competitive market. Our products compete on the basis of advantages that make them more suitable for certain applications as described above

Iodine and its derivatives

We believe we are the world's largest producer of iodine. In 2012, our revenues from iodine and iodine derivatives amounted to US\$578.1 million, representing 24% of our total revenues in that year. We estimate that our sales accounted for approximately 34% of world iodine sales by volume in 2012.

Market

Iodine and iodine derivatives are used in a wide range of medical, agricultural and industrial applications as well as in human and animal nutrition products. Iodine and iodine derivatives are used as raw materials or catalysts in the formulation of products such as X-ray contrast media, biocides, antiseptics and disinfectants, pharmaceutical intermediates, polarizing films for LCDs, chemicals, herbicides, organic compounds and pigments. Iodine is also added in the form of potassium iodate or potassium iodide to edible salt to prevent iodine deficiency disorders. Iodine is also added in the form of potassium iodate or potassium iodide to edible salt to prevent iodine deficiency disorders. We have seen consistent growth in the iodine market in recent years, with demand being led by uses related to X-ray contrast media and pharmaceuticals. We estimate that the global market size in 2012 was just under 31,000 metric tons, with almost 60% of supply coming from Chilean producers, including us. Increased supply entered the market in 2012 and we expect to see additional new supply in 2013.

Our products

We produce iodine, and through a joint venture with Ajay North America L.L.C., (“Ajay”), a U.S.-based Company, we produce organic and inorganic iodine derivatives. Ajay-SQM Group (“ASG”), established in the mid-1990s, has production plants in the United States, Chile and France. ASG is the world’s leading inorganic and organic iodine derivatives producer.

Consistent with our business strategy, we are constantly working on the development of new applications for our iodine-based products, pursuing a continuing expansion of our businesses and maintaining our market leadership.

We manufacture our iodine and iodine derivatives in accordance with international quality standards and have qualified our iodine facilities and production processes under the ISO-9001:2008 program, providing third party certification of the quality management system and international quality control standards that we have implemented.

The following table sets forth our total sales and revenues from iodine and iodine derivatives for 2012, 2011, 2010 and 2009:

| Sales Volume (in Th. MT) | 2012 | 2011 | 2010 | 2009 |
|--|-------|-------|-------|-------|
| Iodine and its derivatives | 11.0 | 12.2 | 11.9 | 7.2 |
| Revenues (in millions of U.S. dollars) | 578.1 | 454.5 | 316.3 | 190.9 |

Our sales revenues increased from US\$454.5 million in 2011 to US\$578.1 million in 2012. This increase was primarily attributable to increases in sales volumes and increases in price as a consequence of strong demand growth among most users.

Marketing and customers

In 2012, we sold our iodine products to approximately 300 customers in 60 countries and most of our sales were exports: 31% was sold to customers in Europe, the Middle East and Africa, 36% to customers in North America, 3% to customers in Central and South America and 30% to customers in Asia and other regions. No single customer accounted for more than 8% of our iodine sales in 2012, and we estimate that our 10 largest customers accounted in the aggregate for approximately 47% of sales.

The following table sets forth the geographical breakdown of our sales for 2012, 2011, 2010 and 2009.

| Sales breakdown | 2012 | 2011 | 2010 | 2009 |
|--------------------------------|------|------|------|------|
| Europe, Middle East and Africa | 31 % | 36 % | 35 % | 31 % |
| North America | 36 % | 32 % | 33 % | 36 % |
| Central and South America | 3 % | 3 % | 5 % | 3 % |
| Asia and Others | 30 % | 29 % | 27 % | 30 % |

We sell iodine through our own worldwide network of representative offices and through our sales, support and distribution affiliates. We maintain inventories of iodine at our facilities throughout the world to facilitate prompt delivery to customers. Iodine sales are made pursuant to spot purchase orders or within the framework of supply agreements. Supply agreements generally specify annual minimum and maximum purchase commitments, and prices are adjusted periodically, according to prevailing market prices.

Competition

The world's main iodine producers are based in Chile, Japan and the United States. Iodine is also produced in Russia, Turkmenistan, Indonesia and China.

Iodine production in Chile starts from a unique mineral ore known as caliche ore, whereas in Japan, the United States, Russia, Turkmenistan and Indonesia, producers extract iodine from underground brines that are mainly obtained together with the extraction of natural gas and petroleum. In China, iodine is extracted from seaweed.

Six Chilean companies (SQM; Sirocco Mining Inc., a Canadian company previously known as Atacama Minerals; Atacama Chemical S.A. (Cosayach), controlled by the Chilean holding Inverraz S.A.; ACF Minera S.A. also owned by a Chilean family; Algorta Norte S.A., a joint venture between ACF Minera and Toyota Tsusho; and SCM Bullmine) accounted for approximately 58% of global iodine sales in 2012 (34% by SQM and 24% by the other five Chilean producers).

We estimate that eight Japanese iodine producers accounted for approximately 31% of global iodine sales in 2012, including recycled iodine.

We estimate that iodine producers in the United States (one of which is owned by Ise Chemicals Ltd., a Japanese company) accounted for 4% of world iodine sales in 2012.

Iodine recycling is an increasing trend worldwide. Several Japanese producers have recycling facilities where they recover iodine and iodine derivatives from iodine waste streams. Iodine recycling, mainly related to LCD consumption, has increased over the past few years and currently represents approximately 17% of world iodine sales. It is estimated that approximately 70% to 75% of the world recycling was done by Japanese iodine producers.

SQM, through ASG or alone, is also actively participating in the iodine recycling business using iodinated side-streams from a variety of chemical processes in Europe, the United States and Asia.

We estimate that worldwide sales of iodine were slightly less than 31.0 thousand metric tons in 2012.

The prices of iodine and iodine derivative products are determined by market conditions. World iodine prices vary depending upon, among other things, the relationship between supply and demand at any given time. The supply of iodine varies principally depending upon the production of the few major iodine producers, including us, and their respective business strategies. As a result of steadily growing demand, and despite new supply from other Chilean producers, our average iodine sales prices increased to more than US\$50 per kilogram in 2012.

Demand for iodine varies depending upon overall levels of economic activity and the level of demand in the medical, pharmaceutical, industrial and other sectors that are the main users of iodine and iodine-derivative products.

The main factors of competition in the sale of iodine and iodine derivative products are reliability, price, quality, customer service and the price and availability of substitutes. We believe we have competitive advantages compared to other producers due to the size and quality of our mining reserves and the available production capacity. We believe our iodine is competitive with that produced by other manufacturers in certain advanced industrial processes. We also believe we benefit competitively from the long-term relationships we have established with our largest customers. While there are substitutes for iodine available for certain applications, such as antiseptics and disinfectants, there are limited cost-effective substitutes currently available for the main nutritional, pharmaceutical, animal feed, and main chemical uses of iodine, which together account for most iodine sales.

Lithium and its derivatives

We believe we are one of the principal producers of lithium carbonate and one of the world's largest producers of lithium hydroxide. In 2012, our revenues from lithium sales amounted to US\$222.2 million, representing 9% of our total revenues. We estimate that our sales accounted for approximately 35% of the sale of global lithium chemicals sales in volume.

Market

Lithium carbonate is used in a variety of applications, including electrochemical materials for batteries, ceramic and enamel frits, heat resistant glass (ceramic glass), primary aluminum smelting process, air conditioning chemicals, continuous casting powder for steel extrusion, synthesis of pharmaceuticals and lithium derivatives.

Lithium hydroxide is primarily used as a raw material in the lubricating grease industry, as well as in the dyes and the battery industries.

Our products

We produce lithium carbonate at the Salar del Carmen facilities, near Antofagasta, Chile, from solutions with high concentrations of lithium coming from the potassium chloride production at the Salar de Atacama. The annual production capacity of our lithium carbonate plant is 48,000 metric tons per year. We believe that the technologies we use, together with the high concentrations of lithium and unique characteristics of the Salar de Atacama, such as high evaporation rate and concentration of other minerals, allow us to be one of the lowest cost producers worldwide.

We also produce lithium hydroxide at our facilities at the Salar del Carmen, next to the lithium carbonate operation. The lithium hydroxide facility has a production capacity of 6,000 metric tons per year and is one of the largest plants in the world.

The following table sets forth our total sales and revenues from lithium carbonate and its derivatives for 2012, 2011, 2010 and 2009:

| Sales Volume (in Th. MT) | 2012 | 2011 | 2010 | 2009 |
|--|-------|-------|-------|-------|
| Lithium and its derivatives | 45.7 | 40.7 | 32.4 | 21.3 |
| Revenues (in millions of U.S. dollars) | 222.2 | 183.4 | 150.8 | 117.8 |

Our revenues in 2012 were US\$222.2 million, a 21% increase from US\$183.4 million in 2011, due to significantly higher sales volumes resulting from an increase in demand in 2012, mainly driven by an increase in demand for rechargeable batteries and by uses related to construction, such as grease and glass. Other producers experienced some supply constraints during part of the year, allowing us to strengthen our position as a leader in lithium carbonate supply.

Marketing and customers

In 2012, we sold our lithium products to over 300 customers in approximately 50 countries. Virtually all of our lithium products were sold overseas: 24% to customers in Europe, the Middle East and Africa, 10% to customers in North America, 64% to customers in Asia and Oceania and 2% to customers in other regions. No single customer accounted for more than 13% of our lithium sales in 2012, and we estimate that our 10 largest customers accounted in aggregate for approximately 50% of sales.

Edgar Filing: CHEMICAL & MINING CO OF CHILE INC - Form 6-K

The following table sets forth the geographical breakdown of our sales for 2012, 2011, 2010 and 2009.

| Sales breakdown | 2012 | 2011 | 2010 | 2009 |
|--------------------------------|------|------|------|------|
| Europe, Middle East and Africa | 24 % | 28 % | 34 % | 31 % |
| North America | 10 % | 10 % | 12 % | 14 % |
| Asia and Oceania | 64 % | 61 % | 53 % | 53 % |
| Central and South America | 2 % | 1 % | 1 % | 2 % |

We sell lithium carbonate and lithium hydroxide through our own worldwide network of representative offices and through our sales, support and distribution affiliates. We maintain inventories of these products at our facilities throughout the world to facilitate prompt delivery to customers. Sales of lithium carbonate and lithium hydroxide are made pursuant to spot purchase orders or within the framework of supply agreements. Supply agreements generally specify annual minimum and maximum purchase commitments, and prices are adjusted periodically, according to prevailing market prices.

Competition

Our main competitors in the lithium carbonate and lithium hydroxide businesses are Rockwood Lithium (“Rockwood”), a subsidiary of Rockwood Specialties Group Inc., and FMC Corporation (“FMC”). In addition, a number of Chinese producers also contributed to the lithium chemical world market in 2012. Rockwood produces lithium carbonate at its operations in Chile, through Sociedad Chilena del Litio Limitada, and in Nevada, United States. Its production of downstream lithium products is mostly performed in the United States, Germany and Taiwan. FMC has production facilities in Argentina through Minera del Altiplano S.A., where it produces lithium chloride and lithium carbonate. Production of its downstream lithium products is mostly performed in the United States and the United Kingdom.

We believe that lithium production will increase in the near future. A number of new projects to develop lithium deposits have been announced recently, some of which could materialize in the short- to medium-term.

We estimate that worldwide sales of lithium chemicals, expressed as lithium carbonate equivalent (excluding direct use for lithium minerals), amounted to approximately 125,000 metric tons in 2012.

Potassium

We produce potassium chloride and potassium sulfate by extracting brines from the Salar de Atacama that are rich in potassium chloride and other salts.

Since 2009, our end product capacity has increased to over 2 million metric tons per year, granting us improved flexibility and market coverage.

In 2012, our potassium chloride and potassium sulfate revenues amounted to US\$605.1 million, representing 25% of our total revenues and a 8.9% increase compared to 2011. We are currently making investments within our potassium products that will enable us to increase our production and sales of these products.

Potassium is one of the three macronutrients that a plant needs to develop. Although potassium does not form part of a plant’s structure, it is essential to the development of its basic functions. Potassium chloride is the most commonly used potassium-based fertilizer, and it is used to fertilize crops that can resist high levels of chloride, such as wheat, corn and soybeans, among others.

Some benefits that may be obtained through the use of potassium are:

- increased yield and quality;
- increased production of proteins;
- increased photosynthesis;
- intensified transport and storage of assimilates;
- prolonged and more intense assimilation period;

improved water efficiency;

regulated opening and closure of stomata; and

synthesis of lycopene.

Potassium chloride is also an important component for our specialty plant nutrients product line where it is used as a raw material to produce potassium nitrate.

Market

During the last decade, the potassium chloride market has experienced rapid growth due to several key factors such as a growing world population, higher demand for protein-based diets and less arable land. All of these factors have contributed to growing demand for fertilizers and, in particular, potassium chloride, as efforts are being made to maximize crop yields and use resources more efficiently. For the last 10 years, the compound annual growth for the global potassium chloride market was approximately 2%.

Demand in the potassium chloride market decreased in 2012. We estimate that demand reached the level of 50 million metric tons for potassium chloride during 2012, a reduction of approximately 10% as compared to 2011. Despite favorable economic conditions for relevant crops, the demand was mainly affected by economic uncertainty. We expect the potassium chloride market to return to levels closer to 55 million during 2013.

Average prices in the potassium market remained relatively stable compared to 2011. The market has seen major industry contracts close at significantly lower prices in the early months of 2012. We believe these price pressures will have an impact on our potassium revenues in the near term.

Our products

Potassium chloride differs from our specialty plant nutrient products because it is a commodity fertilizer and contains chloride. We offer potassium chloride in two grades: standard and compacted. Potassium sulfate is considered a specialty fertilizer and we offer three grades: standard, compacted and soluble.

The following table shows our combined sales volumes and revenues from potassium chloride and potassium sulfate for 2012, 2011, 2010 and 2009:

| Sales Volume (in Th. MT) | 2012 | 2011 | 2010 | 2009 |
|--|---------|---------|---------|-------|
| Potassium chloride and potassium sulfate | 1,209.5 | 1,103.4 | 1,273.0 | 690.0 |
| Revenues (in millions of U.S. dollars) | 605.1 | 555.7 | 528.2 | 399.1 |

Marketing and Customers

In 2012, we sold potassium chloride and potassium sulfate in approximately 80 countries, with 5% of our sales to customers in Chile, 42% to customers in other countries in Central and South America, 11% to customers in Africa, 15% to customers in North America and 27% to customers in other regions. No single customer accounted for more than 23% of our sales of potassium chloride and potassium sulfate in 2012, and we estimate that our 10 largest customers accounted in the aggregate for approximately 61% of such sales.

The following table sets forth the geographical breakdown of our sales for 2012, 2011, 2010 and 2009.

| Sales breakdown | 2012 | 2011 | 2010 | 2009 |
|---------------------------|------|------|------|------|
| Chile | 5 % | 8 % | 6 % | 9 % |
| Central and South America | 42 % | 32 % | 21 % | 18 % |
| Africa | 11 % | 15 % | 16 % | 16 % |
| North America | 15 % | 11 % | 10 % | 13 % |
| Others | 27 % | 34 % | 47 % | 44 % |

Competition

We estimate that we accounted for less than 3% of global sales of potassium chloride in 2012. Our main competitors are Uralkali Group, PCS, Belaruskali and Mosaic. We believe that in 2012 the principal producers in the market were Uralkali Group, which accounted for approximately 18% of global sales, PCS and Belaruskali, which each accounted for approximately 16% of global sales, and Mosaic, which accounted for approximately 15% of global sales.

In the potassium sulfate market, we have several competitors, of which the most important are K+S KALI GmbH (Germany), Tessenderlo Chemie (Belgium) and Great Salt Lake Minerals Corp. (United States). We believe that those three producers account for approximately 40% of the world production of potassium sulfate.

Industrial chemicals

In addition to producing sodium and potassium nitrate for agricultural applications, we produce three grades of sodium and potassium nitrate for industrial applications: industrial, technical and refined grades. The three grades differ mainly in their chemical purity. We enjoy certain operational flexibility when producing industrial sodium and potassium nitrate because they are produced from the same process as their equivalent agricultural grades, needing only an additional step of purification. We may, with certain constraints, shift production from one grade to the other depending on market conditions. This flexibility allows us to maximize yields and to reduce commercial risk.

In addition to producing industrial nitrates, we produce and commercialize other industrial chemicals such as boric acid, a by-product of the production of potassium sulfate, and industrial-grade potassium chloride, both of which are sold into industrial markets in crystalline form. In 2012, our revenues from industrial chemicals were US\$245.2 million, representing approximately 10% of our total revenues for that year.

Market

Industrial sodium and potassium nitrates are used in a wide range of industrial applications, including the production of glass, ceramics, explosives, charcoal briquettes, metal treatments and various chemical processes. In addition, this product line enjoys long-term growth potential from industrial nitrates for thermal storage in solar energy projects. Solar salts for this specific application contain a blend of 60% sodium nitrate and 40% potassium nitrate by weight ratio.

Boric acid is primarily used as raw material in the manufacturing of glass, fiberglass, ceramic and enamel frits, and LCD flat panel displays.

Industrial potassium chloride is mainly used as an additive in oil and gas drilling fluids as well as in the production of carragenine.

Our products

The following table sets forth our sales volumes of industrial chemicals and total revenues for 2012, 2011, 2010 and 2009:

| Sales Volume (in Th. MT) | 2012 | 2011 | 2010 | 2009 |
|--|-------|-------|-------|-------|
| Industrial nitrates | 277.7 | 181.2 | 98.9 | 149.2 |
| Boric Acid | 1.8 | 2.4 | 2.6 | 3.4 |
| Revenues (in millions of U.S. dollars) | 245.2 | 139.5 | 149.7 | 115.4 |

Sales of industrial chemicals increased from US\$139.5 million in 2011 to US\$245.2 million in 2012 primarily as a result of an increase in sales volumes of solar salts products due to new alternative energy projects that utilize industrial grade sodium and potassium nitrate solar thermal energy.

Marketing and customers

We sold our industrial nitrate products in 50 countries in 2012, with 49% percent of our sales of industrial chemicals to customers in North America, 37% to customers in Europe, the Middle East and Africa, 7% to customers in Central and South America and 7% to customers in other regions. No single customer accounted for more than 33% of our sales of industrial chemicals in 2012, and we estimate that our 10 largest customers accounted in the aggregate for approximately 70% of such sales.

The following table sets forth the geographical breakdown of our sales for 2012, 2011, 2010 and 2009.

| Sales breakdown | 2012 | 2011 | 2010 | 2009 |
|-----------------|------|------|------|------|
|-----------------|------|------|------|------|

Edgar Filing: CHEMICAL & MINING CO OF CHILE INC - Form 6-K

| | | | | |
|--------------------------------|------|------|------|------|
| North America | 49 % | 26 % | 18 % | 30 % |
| Europe, Middle East and Africa | 37 % | 52 % | 55 % | 45 % |
| Central and South America | 7 % | 17 % | 22 % | 18 % |
| Others | 7 % | 5 % | 5 % | 7 % |

We sell our industrial chemical products mainly through our own worldwide network of representative offices and through our sales and distribution affiliates. We maintain inventories of our different grades of sodium nitrate and potassium nitrate products at our facilities in Europe, North America, South Africa and South America to achieve prompt deliveries to customers. Our Research and Development department, together with our foreign affiliates, provides technical support to our customers and continuously works with them to develop new products or applications for our products.

Competition

We believe we are the world's largest producer of industrial sodium and potassium nitrate. In the case of industrial sodium nitrate, we estimate that our sales represented 60% of world demand in 2012 (excluding China and India internal demand, for which we believe reliable estimates are not available). Our competitors are mainly based in Europe and Asia, producing sodium nitrate as a by-product of other production processes. In refined grade sodium nitrate, BASF AG, a German corporation and several producers in China and Eastern Europe are highly competitive in the European and Asian markets. Our industrial sodium nitrate products also compete indirectly with substitute chemicals, including sodium carbonate, sodium hydroxide, sodium sulfate, calcium nitrate and ammonium nitrate, which may be used in certain applications instead of sodium nitrate and are available from a large number of producers worldwide.

Our main competitor in the industrial potassium nitrates business is Haifa; which we estimate had a 25% of the market share. We estimate that our market share was approximately 40% for 2012.

Producers compete in the market for industrial sodium and potassium nitrate based on reliability, product quality, price and customer service. We believe that we are a low cost producer of both products and are able to produce high quality products.

In the boric acid market, we are a relatively small producer mainly supplying regional needs.

Other products

A large part of our other revenue is related to fertilizer trading, usually commodities. These fertilizers are traded in large volumes worldwide. We have developed a trade, supply, and inventory management business that allows us to respond quickly and effectively to the changing fertilizer market in which we operate and profit on these trades.

Production process

Our integrated production process can be classified according to our natural resources:

caliche ore deposits, which contain nitrates and iodine; and

salar brines, which contain potassium, lithium, sulfate, boron and magnesium.

Caliche ore deposits

Caliche ore deposits are located in northern Chile. During 2012, we operated three mines in this region: Pedro de Valdivia, El Toco (mining site of Maria Elena production facilities) and Nueva Victoria. In March 2010, operations at El Toco and Pampa Blanca, two of our mines, were temporarily suspended in an effort to optimize inventory of these products due to decreased global demand for nitrates and iodine during the preceding 15 months. In November 2010, mining activities resumed in El Toco. Mining operations at Pampa Blanca have not resumed.

Caliche ore is found under a layer of barren overburden in seams with variable thickness from twenty centimeters to five meters, and with the overburden varying in thickness from half a meter to one and a half meters.

Before proper mining begins, a full exploration stage is carried out, including full geological reconnaissance, sampling and drilling caliche ore to determine the features of each deposit and its quality. Drill-hole samples are properly identified and tested at our chemical laboratories. With the exploration information on a closed grid pattern of drill holes, the ore evaluation stage provides information for mine planning purposes. Mine planning is done on a long-term basis (10 years), medium-term basis (three years) and short-term basis (one year). A mine production plan is a dynamic tool that details daily, weekly and monthly production plans. After drill holes are made, information is updated to offer the most accurate ore supply schedule to the processing plants.

The mining process generally begins with bulldozers first ripping and removing the overburden in the mining area. This process is followed by production drilling and blasting to break the caliche seams. Front-end loaders load the ore on off-road trucks. In the Pedro de Valdivia mine, trucks deliver the ore to stockpiles next to rail loading stations. The stockpiled ore is later loaded onto railcars that take the mineral to the processing facilities.

At the Pedro de Valdivia facility, the ore is crushed and leached to produce concentrated solutions carrying the nitrate and iodine. The crushing of the ore produces a coarse fraction that is leached in a vat system and a fine fraction that is leached by agitation. These are followed by liquid-solid separation, where solids precipitate as sediment and liquids containing nitrate and iodine are sent to be processed. Operations at the El Toco mining site of Maria Elena use a heap leaching production process. In Nueva Victoria and El Toco, the run of mine ore is loaded in heaps and leached to produce concentrated solutions.

Caliche ore-derived products

Caliche ore-derived products are: sodium nitrate, potassium nitrate, sodium potassium nitrate, iodine and iodine derivatives.

Sodium nitrate

During 2012, sodium nitrate for both agricultural and industrial applications was produced at the Pedro de Valdivia facility using the Guggenheim method, which was originally patented in 1921, and is based on a closed circuit method of leaching vats. This process uses heated brines to leach the crushed caliche in vats and selectively dissolve the contents. The concentrated solution is then cooled, producing sodium nitrate crystals, which can then be separated from the brine using basket centrifuges. After the crystallization process, the brine is pumped to the iodine facilities, where the iodide is separated in a solvent extraction plant. The brine is returned to the vat leaching process. The fine fraction of caliche's crushing process is leached at ambient temperature with water, producing a weak solution that is pumped to the iodine facilities. After a solvent extraction process, the brine is pumped to solar evaporation ponds in Coya Sur, 15 km south of María Elena.

Our total current crystallized sodium nitrate production capacity at the Pedro de Valdivia facility is approximately 500,000 metric tons per year. Crystallized sodium nitrate is processed further at the Coya Sur and María Elena production plants to produce potassium nitrate in different qualities, sodium potassium nitrate and/or crystallized or prilled nitrates (potassium or sodium), which are transported to our port facilities in Tocopilla by railway for shipping to customer and distributors worldwide.

Potassium nitrate

Potassium nitrate is produced at our Coya Sur facility using a production process developed by us. The brine leached with the fine fraction process at Pedro de Valdivia and the brines produced by heap leaching process in Maria Elena are pumped to Coya Sur's solar evaporation ponds for a nitrate concentration process. After the nitrate concentration process, the brine is pumped to a conversion plant where potassium salts are added and where a chemical reaction begins and produces brine with dissolved potassium nitrate. This brine is pumped to a crystallization plant, which crystallizes the potassium nitrate by cooling and separating it from the liquid by centrifuge.

Concentrated nitrate salts were produced at Pampa Blanca until March 2010, and are currently produced at Nueva Victoria by leaching caliche ore in heaps in order to extract solutions that are rich in iodine and nitrates. These solutions are then sent to plants where iodine is extracted through both solvent-extraction and blow out processes. The remaining solutions are subsequently sent to solar evaporation ponds where the solutions are evaporated and rich nitrate salts are produced. These concentrated nitrate salts are then sent to Coya Sur where they are used to produce potassium nitrate.

Our current potassium nitrate production capacity at Coya Sur is approximately 950,000 metric tons per year, including 500,000 metric tons per year of technical grade potassium nitrate. A new potassium nitrate plant began operations in 2011. During 2012, we produced approximately 246,000 tons of potassium nitrate at this plant. This new plant was designed to use raw material salts harvested in Nueva Victoria and potassium salts from the Salar de Atacama.

The nitrates produced in crystallized or prilled form at Coya Sur have been certified by TÜV-Rheiland under the quality standard ISO 9001:2008. Potassium nitrate produced at Coya Sur and María Elena is transported to Tocopilla for shipping to customers and distributors.

Sodium potassium nitrate

Sodium potassium nitrate is a mixture of approximately two parts sodium nitrate per one part potassium nitrate. We produce sodium potassium nitrate at our Coya Sur and María Elena prilling facilities using standard, non-patented production methods we have developed. Crystallized sodium nitrate is mixed with the crystallized potassium nitrate to make sodium potassium nitrate, which is then prilled. The prilled sodium potassium nitrate is transported to Tocopilla for bulk shipment to customers.

The production process for sodium potassium nitrate is basically the same as that for sodium nitrate and potassium nitrate. With certain production restraints and following market conditions we may supply sodium nitrate, potassium nitrate or sodium potassium nitrate either in prilled or crystallized form.

Iodine and iodine derivatives

We produce iodine at our Pedro de Valdivia, Maria Elena and Nueva Victoria facilities. During 2012, iodine was produced by extracting it from the solutions resulting from the heap leaching of caliche ore at María Elena and Nueva Victoria, including the Iris facility as part of the Nueva Victoria facility, and from the vat leaching of caliche ore at the Pedro de Valdivia facilities. Production of iodine at the Iris plant began in December 2011.

As in the case of nitrates, the process of extracting iodine from the caliche ore is well established, but variations in the iodine and other chemical contents of the treated ore and other operational parameters require a high level of know-how to manage the process effectively and efficiently.

The solutions resulting from the leaching of caliche carry iodine in iodate form. Part of the iodate solution is reduced to iodide using sulfur dioxide, which is produced by burning sulfur. The resulting iodide is combined with the rest of the untreated iodate solution to release elemental iodine in low concentrations. The iodine is then extracted from the aqueous solutions and concentrated as iodide form using a solvent extraction and stripping plant in the Pedro de Valdivia and Nueva Victoria facilities and using a blow out plant in Iris. The concentrated iodide is oxidized to solid iodine, which is then refined through a smelting process and prilled. We have obtained patents in the United States and recently in Chile under the Chilean patent number 47,080, for our iodine prilling process.

Prilled iodine is tested for quality control purposes, using international standard procedures that we have implemented, then packed in 20 to 50 kilogram drums or 350 to 700 kilogram maxibags and transported by truck to Antofagasta or Iquique for export. Our iodine and iodine derivatives production facilities have qualified under the new ISO-9001:2008 program, providing third-party certification—by TÜV-Rheiland—of the quality management system. The last recertification process was approved in February 2011. Iodine from the Iris plant was certified under ISO-9001:2008 in April 2012.

Our total iodine production in 2012 was approximately 10,900 metric tons: approximately 6,000 metric tons from Nueva Victoria and Iris, 3,200 metric tons from Pedro de Valdivia, and 1,700 metric tons from María Elena. The Nueva Victoria facility is also used for recycling iodine from the potassium iodide contained in the LCD waste solutions imported mainly from Korea. Nueva Victoria is also equipped to toll iodine from iodide delivered from other SQM facilities. We have the flexibility to adjust our production according to market conditions. Our total current production capacity at our iodine production plants is approximately 12,500 metric tons per year.

We use a portion of the produced iodine to manufacture inorganic iodine derivatives, which are intermediate products used for manufacturing agricultural and nutritional applications, at facilities located near Santiago, Chile. We also produce inorganic and organic iodine derivative products together with Ajay, which purchases iodine from us. In the past, we have primarily marketed our iodine derivative products in South America, Africa and Asia, while Ajay and its affiliates have primarily sold their iodine derivative products in North America and Europe.

In September 2010, the National Environmental Commission of Chile (*Comisión Nacional del Medioambiente* or “CONAMA”) approved the environmental study of our Pampa Hermosa project in the Region of Tarapacá in Chile. This approval allowed us to increase the production capacity of our Nueva Victoria operations from 4,500 to 11,000 metric tons of iodine per year and to produce up to 1.2 million metric tons of nitrates, mine up to 33 million metric tons of caliche per year and use new water rights of up to 570.8 liters per second. During 2012, we made investments in order to increase the water capacity in the Nueva Victoria operations from two water sources approved by the

environmental study of Pampa Hermosa, expand the capacity of solar evaporation ponds and to implement new areas of mining and collection of solutions. Additional expansions may be done from time to time in the future, depending on market conditions.

During 2012, we submitted a request to the CONAMA requesting approval to expand our caliche ore extraction in the region of Antofagasta, which, if approved, is expected to increase production capacity by 10,000 tons of iodine and 1.3 million tons of nitrates per year. The project also requested permission to build a pipeline from the Pacific Ocean to the mining site. Currently, the request is being evaluated by the commission and other governmental agencies.

Salar de Atacama brine deposits

The Salar de Atacama, located approximately 250 kilometers east of Antofagasta, is a salt-encrusted depression in the Atacama desert, within which lies an underground deposit of brines contained in porous sodium chloride rock fed by an underground inflow from the Andes mountains. The brines are estimated to cover a surface of approximately 2,800 square kilometers and contain commercially exploitable deposits of potassium, lithium, sulfates and boron. Concentrations vary at different locations throughout the Salar de Atacama. Our production rights to the Salar de Atacama are pursuant to a lease agreement with Corfo, which expires in 2030. The lease agreement permits the CCHEN to establish a total accumulated extraction limit of 180,100 tons of lithium. More than halfway through the term of the lease agreement, we have extracted less than half of the total accumulated extraction limit of lithium.

Brines are pumped from depths of 1.5 to 60 meters below surface, through a field of wells that are located in areas of the Salar de Atacama that contain relatively high concentrations of potassium, lithium, sulfate, boron and other minerals.

We process these brines to produce potassium chloride, potassium sulfate, lithium carbonate, lithium hydroxide, lithium chloride, boric acid and bischofite (magnesium chloride).

Potassium chloride

We use potassium chloride in the production of potassium nitrate. Production of our own supplies of potassium chloride provides us with substantial raw material cost savings.

In order to produce potassium chloride, brines from the Salar de Atacama are pumped to solar evaporation ponds. Evaporation of the brines results in a complex crystallized mixture of salts of potassium, sodium and magnesium. Waste sodium chloride salts are removed by precipitation. After further evaporation, the sodium and potassium salts are harvested and sent for treatment at one of the potassium chloride plants where potassium chloride is separated by a grinding, flotation, and filtering process. Potassium salts also containing magnesium are harvested and sent for treatment at one of the cold leach plants where magnesium is removed. Potassium chloride is transferred for

approximately 300 kilometers to our Coya Sur facilities via a dedicated truck transport system, where it is used in the production of potassium nitrate. We sell potassium chloride produced at the Salar de Atacama in excess of our needs to third parties. All of our potassium-related plants in the Salar de Atacama currently have a production capacity in excess of up to 2.6 million metric tons per year. Actual production capacity will depend on volume, metallurgical recovery rates and quality of the mining resources pumped from the Salar de Atacama.

During 2012, we achieved a production capacity of compacted potassium chloride in excess of 1.2 million metric tons per year and we plan to carry out further expansions of production capacity of the compaction plant during 2013.

The by-products of the potassium chloride production process are (i) brines remaining after removal of the potassium chloride, which are used to produce lithium carbonate as described below, with the excess amount being reinjected into the Salar de Atacama; (ii) sodium chloride, which is similar to the surface material of the Salar de Atacama and is deposited at sites near the production facility; and (iii) other salts containing magnesium chloride.

Lithium carbonate and lithium chloride

A portion of the brines remaining after the production of potassium chloride is sent to additional solar concentration ponds adjacent to the potassium chloride production facility. Following additional evaporation, the remaining concentrated solution of lithium chloride is transported by truck to a production facility located near Antofagasta, approximately 230 kilometers from the Salar de Atacama. At the production facility, the solution is purified and treated with sodium carbonate to produce lithium carbonate, which is dried and then, if necessary, compacted and finally packaged for shipment. A portion of this purified lithium chloride solution is packaged and shipped to customers. The production capacity of our lithium carbonate facility is approximately 48,000 metric tons per year. Future production will depend on the actual volumes and quality of the lithium solutions sent by the Salar de Atacama operations, as well as prevailing market conditions.

Lithium carbonate production quality assurance program has been certified by TÜV-Rheiland under ISO 9001:2000 since 2005 and under ISO 9001:2008 since October 2009.

Lithium hydroxide

Lithium carbonate is sold to customers, and we also use it as a raw material for our lithium hydroxide monohydrate facility, which started operations at the end of 2005. This facility has a production capacity of 6,000 metric tons per year and is located in the Salar del Carmen, adjacent to our lithium carbonate operations. In the production process, lithium carbonate is reacted with a lime solution to produce lithium hydroxide brine and calcium carbonate salt, which is filtered and piled in reservoirs. The brine is evaporated in a multiple effect evaporator and crystallized to produce the lithium hydroxide monohydrate, which is dried and packaged for shipment to customers.

Lithium hydroxide production quality assurance program has been certified by TÜV-Rheiland under ISO 9001:2000 since 2007 and under ISO 9001:2008 since October 2009.

Potassium sulfate and boric acid

Approximately 12 kilometers northeast of the potassium chloride facilities at the Salar de Atacama, we use the brines from the Salar de Atacama to produce potassium sulfate, potassium chloride (as a by-product of potassium sulfate process) and boric acid. The plant is located in an area of the Salar de Atacama where high sulfate and potassium concentrations are found in the brines. Brines are pumped to pre-concentration solar evaporation ponds where waste sodium chloride salts are removed by precipitation. After further evaporation, the sulfate and potassium salts are harvested and sent for treatment at the potassium sulfate plant. Potassium sulfate is produced using flotation, concentration and reaction processes, after which it is crystallized, dried and packaged for shipment. Production capacity for the potassium sulfate plant is approximately 340,000 metric tons per year. This capacity is part of the total plant capacity of 2.6 million metric tons per year, in our dual plant complex where we may switch, to some extent, between potassium chloride and potassium sulfate production.

The principal by-products of the production of potassium sulfate are: (i) non-commercial sodium chloride, which is deposited at sites near the production facility, and (ii) remaining solutions, which are re-injected into the Salar de Atacama or returned to the evaporation ponds. The principal by-products of the boric acid production process are remaining solutions that are treated with sodium carbonate to neutralize acidity and then are reinjected into the Salar de Atacama.

Raw materials

The main raw material that we require in the production of nitrate and iodine is caliche ore, which is obtained from our surface mines. The main raw material in the production of potassium chloride, lithium carbonate and potassium sulfate is the brine extracted from our operations at the Salar de Atacama.

Other important raw materials are sodium carbonate (used for lithium carbonate production and for the neutralization of iodine solutions), sulfur, sulfuric acid, kerosene, anti-caking and anti-dust agents, ammonium nitrate (used for the preparation of explosives in the mining operations), woven bags for packaging our final products, electricity acquired from electric utilities, and liquefied natural gas and fuel oil in heat generation. Our raw material costs (excluding caliche ore and salar brines and including energy) represented approximately 20% of our cost of sales in 2012.

We have several electricity supply agreements signed with major producers in Chile which are expected to cover our electricity needs until 2030. We have been connected to the northern power grid in Chile, which currently supplies electricity to most cities and Industrial facilities in northern Chile, since April 2000.

In May 2001, we entered into a 10-year gas supply contract with Distrinor S.A. (a subsidiary of E-CL) for a maximum of 3,850,000 million Btu per year. This gas supply was considered sufficient at the time to satisfy the requirements for the facilities that are connected to a natural gas supply. However, beginning in 2004, the Argentinean government imposed restrictions on the supply of natural gas to Chile and, in 2011, the supply came to a complete stop. In 2010, Chile began to import liquefied natural gas. In 2012, we received liquefied natural gas through this supply stream.

We obtain ammonium nitrate, sulfur, sulfuric acid, kerosene and soda ash from several large suppliers, mainly in Chile and the United States, under long-term contracts or general agreements, some of which contain provisions for annual revisions of prices, quantities and deliveries. Diesel fuel is obtained under contracts that provide fuel at international market prices.

We believe that all of our contracts and agreements with third-party suppliers with respect to our main raw materials contain standard and customary commercial terms and conditions.

Chilean government regulations

We are subject to the full range of government regulations and supervision generally applicable to companies engaged in business in Chile, including labor laws, social security laws, public health laws, consumer protection laws, environmental laws, tax laws, securities laws and anti-trust laws. These include regulations to ensure sanitary and safety conditions in manufacturing plants.

We conduct our mining operations pursuant to exploration concessions and exploitation concessions granted pursuant to applicable Chilean law. Exploitation concessions essentially grant a perpetual right to conduct mining operations in the areas covered by the concessions, provided that annual concession fees are paid (with the exception of the Salar de Atacama rights, which have been leased to us until 2030). Exploration concessions permit us to explore for mineral resources on the land covered thereby for a specified period of time, and to subsequently request a corresponding exploitation concession.

Under Law No. 16,319 that created the CCHEN (*Ley 16.319 que crea la Comisión Chilena de Energía Nuclear*), we have an agreement with the CCHEN regarding the exploitation and sale of lithium from the Salar de Atacama. The agreement sets quotas for the tonnage of lithium authorized to be sold.

We also hold water rights obtained from the Chilean water regulatory authority for the supply of water from rivers or wells near our production facilities sufficient to meet our current and anticipated operating requirements. The Water Code is subject to changes, which could have a material adverse impact on our business, financial condition and results of operations. Law No. 20,017, published on June 16, 2005, modified the Chilean laws relating to water rights. Under certain conditions, these modifications allow the constitution of permanent water rights of up to two liters per second for each well built prior to June 30, 2004, in the locations where we conduct our mining operations. In constituting these new water rights, the law does not consider the availability of water, or how the new rights may affect holders of existing rights. Therefore, the amount of water we can effectively extract based on our existing rights could be reduced if these additional rights are exercised. These and other potential future changes to Chilean laws relating to water rights could have a material adverse impact on our business, financial condition and results of operations.

We operate port facilities at Tocopilla for shipment of products and delivery of certain raw materials pursuant to maritime concessions, under applicable Chilean laws, which are normally renewable on application, provided that such facilities are used as authorized and annual concession fees are paid.

In 2005, the Chilean Congress approved the Royalty Law, which established a royalty tax to be applied to mining activities developed in Chile. In 2010, modifications were made to the law and taxes were increased. In 2012, new modifications to the tax laws were enacted to permanently set the corporate tax rate at 20%. The Chilean government may again decide to levy additional taxes on mining companies or other corporations in Chile, and such taxes could have a material adverse impact on our business, financial condition and results of operations.

In 2006, the Chilean Congress amended the Labor Code, and effective January 15, 2007, certain changes were made affecting companies that hire subcontractors to provide certain services. This new law, known as the Subcontracting Law (*Ley de Subcontratación*), further amends the Labor Accidents Law No. 16,744 to provide that, that when a serious accident in the workplace occurs, a company must halt work at the site where the accident took place until authorities from the SERNAGEOMIN, the Labor Board or the SNA, inspect the site and prescribe the measures such

company must take to prevent future risks. Work may not be resumed until such company has taken the prescribed measures, and the period of time before work may be resumed may last for a number of hours, days, or longer. The effects of this law could have a material adverse effect on our business, financial condition and results of operations.

On December 2, 2009, Law No. 20,393 went into effect, establishing a system of criminal liability for legal entities. The objective of the new regulation is to allow legal entities to be prosecuted for the crimes of (a) asset laundering, (b) financing terrorism and (c) bribery, where such crimes are committed by people who hold relevant positions within a legal entity in order to benefit that legal entity. The law establishes a prevention model that includes, among others, the designation of a person in charge of prevention and the establishment of special programs and policies. The implementation of this model can exempt a company from liability.

On January 1, 2010, Law No. 20,382 went into effect, introducing modifications to the Securities Law and Law No. 18,046 on Corporations (*Ley de Sociedades Anónimas* or the “Chilean Corporations Act”). The new law relates to corporate governance and, in general, seeks to improve such matters as the professionalization of senior management at corporations, the transparency of information, and the detection and resolution of possible conflicts of interest. The law establishes the concept of an independent director for certain corporations, including SQM. Such director has a preferential right to be a member of the Directors’ Committee, which position, in turn, grants the director further powers. The new independent director may be proposed by any shareholder with an ownership interest of 1% or more in a company, but he or she must satisfy a series of independence requirements with respect to the company and the company’s competition, providers, customers and majority shareholders. The new law also refines the regulations regarding the information that companies must provide to the general public and to the SVS, as well as regulations relating to the use of inside information, the independence of external auditors, and procedures for the analysis of transactions with related parties.

On January 26, 2010, the Chilean Congress amended the Environmental Law to create the Ministry of Environment, the Environmental Assessment Service and the environmental enforcement superintendence (*Superintendencia del Medioambiente* or “Environmental Enforcement Superintendence”). These changes introduced important amendments to environmental regulations by setting up new agencies and introducing new provisions and procedures applicable to projects whose operations bear an impact on the environment. The new Ministry designs and implements environmental policies relating to environmental conservation, sustainable growth and the protection of Chile’s renewable energy resources. In addition, the Ministry is responsible for enacting emission and quality standard regulations, as well as recovery and decontamination plans. The Environmental Assessment Service pursues procedures of the Environmental Impact Assessment System, pursuant to which projects are environmentally approved or rejected. In procedures for obtaining an environmental license, any person, including legal entities and companies, will be allowed to file oppositions and comments. Summary procedures, such as Environmental Impact Statements, allow comments in support or opposition under certain circumstances. Technical reports from governmental agencies are considered to be final. The Environmental Enforcement Superintendence is an independent agency which oversees and coordinates with other governmental agencies in charge of supervision of suspended projects and projects requiring environmental approval. Likewise, it will receive, investigate and decide complaints concerning the infringement of environmental regulations and will sanction violators, deliver injunction orders and levy relevant fines. The Environmental Enforcement Superintendence had its powers suspended until the First Environmental Court was installed in Santiago on December 28, 2012.

There are currently no material legal or administrative proceedings pending against us except as discussed in note 16.1 to our audited financial statements included below and under “Safety, health and environmental regulations in Chile” and we believe that we are in compliance in all material respects with all applicable statutory and administrative

regulations with respect to our business.

Safety, health and environmental regulations in Chile

Our operations in Chile are subject to both national and local regulations related to safety, health, and environmental protection. In Chile, the main regulations on these matters that are applicable to SQM are the Mine Health and Safety Act of 1989 (*Reglamento de Seguridad Minera* or the “Mine Health and Safety Act”), the Health Code (*Código Sanitario*), the Health and Safety Act 1999 (*Reglamento sobre Condiciones Sanitarias y Ambientales Básicas en los Lugares de Trabajo* or the “Health and Basic Conditions Act”), the Subcontracting Law, and the environmental framework law (*Ley sobre Bases Generales del Medio Ambiente* or the “Environmental Law”).

Health and safety at work are fundamental aspects in the management of mining operations, which is why SQM has made constant efforts to maintain good health and safety conditions for the people working at its mining sites. In addition to the role played by us in this important matter, the Chilean government has a regulatory role, enacting and enforcing regulations in order to protect and ensure the health and safety of workers. The Chilean government, acting through the Ministry of Health and the SERNAGEOMIN, performs health and safety inspections and oversees mining projects, among other tasks, and it has exclusive powers to enforce standards related to environmental conditions and the health and safety of the people performing activities related to mining.

The Mine Health and Safety Act protects workers and nearby communities against health and safety hazards, and it provides for enforcement of the law where compliance has not been achieved. SQM’s Internal Mining Standards (*Reglamentos Internos Mineros*) establish our obligation to maintain a workplace that is safe and free of health risks, in as much as this is reasonably practicable. We must comply with the general provisions of the Health and Basic Conditions Act, our own internal standards, and the provisions of the Mine Health and Safety Act. In the event of non-compliance, the Ministry of Health and particularly the SERNAGEOMIN are entitled to use their enforcement powers to ensure compliance with the law.

In November 2011, the Ministry of Mining enacted Law No. 20,551 that Regulates Mine Closure and its Facilities (*Ley que Regula el Cierre de Faenas e Instalaciones Mineras*). This new statute entered in force in November 2012. Its main requirements are related to disclosures to the SERNAGEOMIN regarding decommissioning plans for each mining site and its facilities, along with the estimated cost to implement such plans. There is a requirement to provide a form of financial assurance to the SERNAGEOMIN to secure compliance with the decommissioning plans. There are various types of financial assurance that satisfy the requirement. By November 2014, we have to inform the SERNAGEOMIN of the estimated costs for each of our decommissioning plans and the corresponding financial assurances we propose to provide, which are subject to approval by the SVS.

The Environmental Law was subjected to several important modifications that entered into effect in January 2010, including the creation of the Ministry of the Environment, the Environmental Assessment Service, and the Environmental Enforcement Superintendence. The Environmental Enforcement Superintendence began operations on December 28, 2012. The new and modified Environmental Law replaced the CONAMA with both the Ministry of the Environment, which is currently the governmental agency responsible for coordinating and supervising environmental issues and the Environmental Assessment Service. Under the new Environmental Law, we will continue to be required to conduct environmental impact studies or statements of any future projects or activities (or their significant modifications) that may affect the environment. With the above mentioned modifications to the Environmental Law, the Environmental Assessment Service, together with other public institutions with mandates related to the environment, evaluates environmental impact studies or statements submitted for its approval. The Environmental Enforcement Superintendence is responsible for auditing environmental performance during the construction, operation, and closure of the projects. The Environmental Law also promotes citizen participation in project evaluation and implementation, providing more opportunities during the environmental evaluation process.

In August 10, 1993, the Ministry of Health published in the Official Gazette a resolution establishing that atmospheric particulate levels at our production facilities in María Elena and Pedro de Valdivia exceeded air quality standards, affecting the nearby towns. The high particulate matter levels came principally from dust produced during the processing of caliche ore, particularly the crushing of the ore before leaching. Residents of the town of Pedro de Valdivia were relocated to the town of María Elena, practically removing Pedro de Valdivia from the scope of the determination of the Ministry of Health. In 1998, authorities approved a plan to reduce the atmospheric particulate levels later modified by Decree No. 37/2004 in March 2004, which called for an 80% reduction of the emissions of atmospheric particulate material. This was achieved by 2008 through the implementation of a project that modified the milling and screening systems used in the processing of the caliche ore at the María Elena facilities. Due to international market conditions, this project ceased its operation in March 2010, and today the milling and screening systems used in the processing of the caliche ore at the María Elena facilities remain closed. Air quality in the area has improved significantly and compliance of air quality standards required by law is being assessed. When the average of three consecutive years meets the Chilean air quality standard, the resolution of 1993 of the Ministry of Health may be reviewed.

On March 16, 2007, the Ministry of Health published in the Official Gazette a resolution establishing that atmospheric particulate levels exceeded air quality standards in the coast-town of Tocopilla, where we have our port operations. The high particulate matter levels are caused mainly by two thermoelectric power plants that use coal and fuel oil and are located next to our port operations. Our participation in particulate matter emissions is very small (less than 0.20% of the total). However, a decontamination plan was developed by the environmental authority, and its implementation began in October 2010. During 2008 and 2009, earlier than required, SQM implemented control measures for mitigating particulate matter emissions in its port operations according to the requirements of this plan. We do not expect any additional measures to be required of SQM following the implementation of the plan.

We continuously monitor the impact of our operations on the environment and have made, from time to time, modifications to our facilities in an effort to eliminate any adverse impacts. Also, over time, new environmental standards and regulations have been enacted, which have required minor adjustments or modifications of our operations for full compliance. We anticipate that additional laws and regulations will be enacted over time with

respect to environmental matters. While we believe that we will continue to be in compliance with all applicable environmental regulations of which we are now aware, there can be no assurance that future legislative or regulatory developments will not impose new restrictions on our operations. We are committed to both complying with all applicable environmental regulations and applying an Environmental Management System to continuously improve our environmental performance.

We have submitted and will continue to submit several environmental impact assessment studies related to our projects to the governmental authorities. We require the authorization of these submissions in order to maintain and to increase our production capacity.

Organizational structure

All of our principal operating subsidiaries are essentially wholly-owned, except for Soquimich Comercial S.A., which is approximately 61% owned by us and whose shares are listed and traded on the Santiago Stock Exchange, and Ajay SQM Chile S.A., which is 51% owned by us. The following is a summary of our main subsidiaries as of December 31, 2012. For a list of all our consolidated subsidiaries, see note 2.5 to our audited financial statements included elsewhere below.

| Principal subsidiaries | Activity | Country of Incorporation | SQM Beneficial Ownership Interest (Direct/Indirect) | |
|---|--|--------------------------|---|---|
| SQM Nitrates S.A. | Extracts and sells caliche ore to subsidiaries and affiliates of SQM | Chile | 100 | % |
| SQM Industrial S.A. | Produces and markets SQM's products directly and through other subsidiaries and affiliates of SQM | Chile | 100 | % |
| SQM Salar S.A. | Exploits the Salar de Atacama to produce and market SQM's products directly and through other subsidiaries and affiliates of SQM | Chile | 100 | % |
| SQM Potasios S.A. | Produces and markets SQM's products directly and through other subsidiaries and affiliates of SQM | Chile | 100 | % |
| Servicios Integrates de Transitos y Transferencias S.A. (SIT) | Owns and operates a rail transport system and also owns and operates the Tocopilla port facilities | Chile | 100 | % |
| Soquimich Comercial S.A. | Markets SQM's specialty plant nutrition products domestically and imports fertilizers for resale in Chile | Chile | 61 | % |
| Ajay-SQM Chile S.A. | Produces and markets SQM's iodine and iodine derivatives | Chile | 51 | % |
| Sales and distribution subsidiaries in the United States, Belgium, Brazil, Venezuela, Ecuador, Peru, Argentina, Mexico, South Africa and other locations. | Market SQM's products throughout the world | Various | | |

Concessions, extraction yields and reserves for the caliche ore mines and salar brines

Concessions for the caliche ore mines and salar brines

As of December 31, 2012, approximately 93% of our total mining concessions were held pursuant to exploitation concessions and 7% pursuant to exploration concessions. Of the exploitation concessions, approximately 80% already have been granted pursuant to applicable Chilean law, and approximately 20% are in the process of being granted. Of the exploration concessions, approximately 54% already have been granted pursuant to applicable Chilean law, and approximately 46% are in the process of being granted.

We made payments to the Chilean government for our exploration and exploitation concessions of approximately US\$9.6 million in 2012.

Additional mining operations leased in the Salar De Atacama region

As of December 31, 2012, SQM Salar S.A. held exclusive rights to exploit the mineral resources in an area covering approximately 140,000 hectares of land in the Salar de Atacama in northern Chile, of which SQM Salar S.A. is entitled to exploit the mineral resources existing in 81,920 hectares. These rights are owned by Corfo and leased to SQM Salar S.A. pursuant to a lease agreement between Corfo and SQM Salar S.A. (the "Lease Agreement"). Corfo may not unilaterally amend the Lease Agreement, and the rights to exploit the resources cannot be transferred. The Lease Agreement provides that SQM Salar S.A. is responsible for the maintenance of Corfo's exploitation rights and for annual payments to the Chilean government, and it expires on December 31, 2030. Furthermore, the same lease Agreement permits the CCHEN to establish a total accumulated extraction limit set at 180,100 tons of lithium per year. More than halfway through the term of the lease agreement, we have extracted less than half of the total accumulated extraction limit of lithium. SQM Salar S.A. is required to make lease-royalty payments to Corfo according to specified percentages of the value of production of minerals extracted from the Salar de Atacama brines. SQM Salar S.A. holds an additional 119,023 hectares of constituted exploitation rights in the Salar de Atacama.

In addition, as of December 31, 2012, we held constituted exploration rights covering approximately 52,400 hectares, and we had applied for additional exploration rights covering approximately 54,600 hectares. Exploration rights are valid for a period of two years, after which we can (i) request an exploitation concession for the land, (ii) request an extension of the exploration rights for an additional two years (the extension only applies to a reduced surface area equal to 50% of the initial area), or (iii) cease exploration of the zone covered by the rights. The weighted average age of the assets of our mining facilities at the Salar de Atacama is approximately 6.79 years. Solar energy is the primary source of power used by the Salar de Atacama operation.

Under the terms of the Salar de Atacama project agreement between Corfo and SQM Salar S.A., (the “Project Agreement”), Corfo has agreed that it will not permit any other person to explore, exploit or mine any mineral resources in approximately 147,000 hectares of the Salar de Atacama (which include the 140,000 hectares) mentioned above. The Project Agreement expires on December 31, 2030.

The following table sets forth our constituted exploitation and exploration concessions as of December 31, 2012:

| Mines | Exploitation concessions | | Exploration concessions | | Total | |
|----------------------------|--------------------------|-----------|-------------------------|----------|--------------|-----------|
| | Total number | Hectares | Total number | Hectares | Total number | Hectares |
| Pedro de Valdivia | 576 | 147,302 | — | — | 576 | 147,302 |
| EI Toco | 611 | 180,964 | 5 | 1,500 | 616 | 182,464 |
| Pampa Blanca | 465 | 136,962 | — | — | 465 | 136,962 |
| Nueva Victoria | 303 | 78,654 | 1 | 1,200 | 304 | 79,854 |
| Subtotal Caliche Ore Mines | 1,955 | 543,882 | 6 | 2,700 | 1,961 | 546,582 |
| Salar de Atacama | 409 | 266,143 | 178 | 52,400 | 587 | 318,543 |
| Subtotal Mines | 2,364 | 810,025 | 184 | 55,100 | 2,548 | 865,125 |
| Subtotal other Areas | 7,609 | 1,690,433 | 224 | 70,800 | 7,833 | 1,761,233 |
| Total | 9,973 | 2,500,458 | 408 | 125,900 | 10,381 | 2,626,358 |

Extraction yields

The following table sets forth certain operating data relating to each of our mines for 2012, 2011, 2010 and 2009:

| (in thousands, unless otherwise stated) | 2012 | 2011 | 2010 | 2009 |
|--|--------|--------|--------|--------|
| Pedro de Valdivia | | | | |
| Metric tons of ore mined | 12,027 | 12,151 | 11,773 | 11,631 |
| Average grade nitrate (% by weight) | 7.3 | 7.2 | 7.4 | 7.3 |
| Iodine (parts per million (ppm)) | 406 | 417 | 403 | 363 |
| Metric tons of crystallized nitrate produced | 466 | 454 | 496 | 434 |
| Metric tons of iodine produced | 3.2 | 3.1 | 3.0 | 2.6 |
| Maria Elena⁽¹⁾ | | | | |
| Metric tons of ore mined | 6,787 | 6,027 | 307 | 5,443 |
| Average grade nitrate (% by weight) | 6.2 | 5.9 | 5.8 | 6.8 |
| Iodine (ppm) | 454 | 466 | 443 | 375 |
| Metric tons of crystallized nitrate produced | — | — | 22 | 155 |
| Metric tons of iodine produced | 1.7 | 0.8 | 0.2 | 1.2 |
| Coya Sur⁽²⁾ | | | | |
| Metric tons of crystallized nitrate produced | 491 | 395 | 155 | 193 |

Reserves for the caliche ore deposits

Our in-house staff of geologists and mining engineers prepares our estimates of caliche ore reserves. The proven and probable reserve figures presented below are estimates, and no assurance can be given that the indicated levels of recovery of nitrates and iodine will be realized.

We estimate ore reserves based on engineering evaluations of assay values derived from sampling of drill-holes and other openings. Drill-holes have been made at different space intervals in order to recognize mining resources. Normally, we start with 400x400 meters and then we reduce spacing to 200x200 meters, 100x100 meters and 50x50 meters. The geological occurrence of caliche mineral is unique and different from other metallic and non-metallic minerals. Caliche ore is found in large horizontal layers at depths ranging from one to four meters and has an overburden between zero and two meters. This horizontal layering is a natural geological condition and allows us to estimate the continuity of the caliche bed based on surface geological reconnaissance and analysis of samples and trenches. Mining resources can be calculated using the information from the drill-hole sampling.

According to our experience in caliche ore, the grid pattern drill-holes with spacing equal to or less than 100 meters produce data on the caliche resources that is sufficiently defined to consider them measured resources and then, adjusting for technical, economic and legal aspects, as proven reserves. These reserves are obtained using the Kriging Method and the application of operating parameters to obtain economically profitable reserves. Similarly, the information obtained from detailed geologic work and samples taken from grid pattern drill-holes with spacing equal to or less than 200 meters can be used to determine indicated resources. By adjusting such indicated resources to account for technical, economic and legal factors, it is possible to calculate probable reserves. Probable reserves are calculated by evaluating polygons and have an uncertainty or error margin greater than that of proven reserves. However, the degree of certainty of probable reserves is high enough to assume continuity between points of observation.

Probable reserves are the economically mineable part of a “mineral resource” and, in some circumstances, a “measured mineral resource.” An indicated mineral resource is that part of a mineral resource for which tonnage, densities, shape, physical characteristics, grade and mineral content can be estimated with a reasonable level of confidence. The

calculation is based on exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings, and drill holes. A measured mineral resource is the part of a mineral resource for which tonnage, densities, shape, physical characteristics, grade and mineral content can be estimated with a high level of confidence. The estimate is based on detailed and reliable exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings, and drill holes.

The calculation of reserves includes diluting materials and allowances for losses which may occur when the material is mined. Appropriate assessments, which may include feasibility studies, have been carried out and include consideration of and modification by realistically assumed mining, metallurgical, economic, marketing, legal, environmental, social and governmental factors. These assessments demonstrate at the time of reporting that extraction is reasonably justified.

Proven and probable reserves are determined using extensive drilling, sampling and mine modeling, in order to estimate potential restrictions on production yields, including cut-off grades, ore type, dilution, waste-to-ore ratio and ore depth. Economic feasibility is determined on the basis of this information.

The estimates of proven reserves of caliche ore at each of our mines as of December 31, 2012 are as follows:

| Mine | Proven Reserves⁽¹⁾ (millions of metric tons) | Nitrate Average Grade (percentage by weight) | Iodine Average Grade (parts per million) |
|-------------------------------|---|--|--|
| Pedro de Valdivia | 172.3 | 7.0 | % 365 |
| Maria Elena | 135.3 | 7.1 | % 414 |
| Pampa Blanca | 71.4 | 5.6 | % 544 |
| Nueva Victoria ⁽³⁾ | 351.2 | 5.7 | % 451 |

In addition, the estimates of our probable reserves of caliche ore at each of our principal mines as of December 31, 2012, are as follows:

| Mine | Probable Reserves⁽¹⁾⁽²⁾ (millions of metric tons) | Nitrate Average Grade (percentage by weight) | Iodine Average Grade (parts per million) |
|-------------------|--|--|--|
| Pedro de Valdivia | 78.5 | 6.9 | % 488 |
| Maria Elena | 98.0 | 7.3 | % 380 |
| Pampa Blanca | 447.8 | 5.8 | % 538 |
| Nueva Victoria | 59.1 | 7.6 | % 362 |

Note: Information set forth in the table above was validated in February 2013, by Mrs. Marta Aguilera, a geologist with over 20 years of experience in the field. She is currently employed by SQM as Manager of Non-metallic Geology. Mrs. Aguilera is a Competent Person (*Persona Competente*), as that term is defined under the Competent Person Law.

Notes on Reserves:

(1) The proven and probable reserves set forth in the tables above are shown before losses related to exploitation and mineral treatment. Proven and probable reserves are affected by mining exploitation methods, which result in differences between the estimated reserves that are available for exploitation in the mining plan and the recoverable material that is finally transferred to the leaching vats or heaps. The average mining exploitation factor for our

different mines ranges between 80% and 90%, whereas the average global metallurgical recoveries of processes for nitrate and iodine contained in the recovered material vary between 55% and 65%.

Probable reserves can be expressed as proven reserves using a conversion factor. On average, this conversion factor is higher than 60%. This factor depends on geological conditions and caliche ore continuity, which vary (2) from mine to mine. The difference between the probable reserve amounts and the converted probable reserve amounts is the result of the lower degree of certainty pertaining to probable reserves compared with proven reserves.

The proven and probable reserves shown above are the result of exploration and evaluation of approximately 19.3% of the total caliche-related mining property of SQM. However, we have explored those areas in which we believe there is a higher potential of finding high-grade caliche ore minerals. The remaining 80.7% of this area has not been explored yet or has had limited reconnaissance to determine hypothetical resources. Reserves shown in these tables are calculated based on mining properties that are not involved in any legal disputes between SQM and other parties.

We maintain an ongoing program of exploration and resource evaluation on the land surrounding the mines at Nueva Victoria, Pedro de Valdivia, María Elena and Pampa Blanca and at other sites for which we have the appropriate concessions. In 2012, we continued a basic reconnaissance program on new mining properties including a geological mapping of the surface and spaced drill-hole campaign covering approximately 17,000 hectares. Additionally, we conducted general explorations based on a closer grid pattern of drill-holes over a total area of approximately 9,365 hectares and, in addition, carried out in-depth sampling of approximately 3,563 hectares (771 hectares at Pedro de Valdivia, 206 hectares at Maria Elena and 2,586 hectares at Nueva Victoria). The exploration and development program in 2013 calls for a basic reconnaissance program over a total area of 4,378 hectares, general exploration over a total area of approximately 2,400 hectares and, in addition, in-depth sampling of approximately 1,957 hectares.

Reserves for the Salar de Atacama brines

Our in-house staff of hydro-geologists and mining engineers prepares our estimates of potassium, sulfate, lithium and boron reserves at the Salar de Atacama. We have exploration concessions of approximately 819.2 square kilometers where we have carried out geological exploration, brine sampling and geostastical analysis. We estimate that our proven and probable reserves as of December 31, 2012, based on economic restrictions, geological exploration, brine sampling and geostatistical analysis up to a depth of 100 meters of our total exploration concessions, and additionally, up to a depth of 500 meters over approximately 47% of the same total area, are as follows:

| | Proven Reserves ⁽¹⁾ (millions of metric tons) | Probable Reserves ⁽¹⁾ (millions of metric tons) | Total (millions of metric tons) |
|--------------------------------|--|--|---|
| Potassium (K+) ⁽²⁾ | 54.0 | 18.6 | 72.6 |
| Sulfate (SO4-2) ⁽³⁾ | 39.7 | 2.3 | 42.0 |
| Lithium (Li+) ⁽⁴⁾ | 3.0 | 3.2 | 6.2 |
| Boron (B3+) ⁽⁵⁾ | 1.1 | 0.2 | 1.3 |

Note: Information set forth in the table above was validated in February 2013, by Mrs. Aguilera, a geologist with over 20 years of experience in the field. She is currently employed by SQM as Manager of Non-metallic Geology. Mrs. Aguilera is a Competent Person (*Persona Competente*), as that term is defined under the Competent Person Law.

Notes on Reserves:

Metric tons of potassium, sulfate, lithium and boron considered in the proven and probable reserves are shown (1) before losses from evaporation processes and metallurgical treatment. The recoveries of each ion depend on both brine composition, which changes over time, and the process applied to produce the desired commercial products.

- (2) Recoveries for potassium vary from 47% to 77%.
 (3) Recoveries for sulfate vary from 27% to 45%.
 (4) Recoveries for lithium vary from 28% to 40%.
 (5) Recoveries for boron vary from 28% to 32%.

The proven and probable reserves are based on drilling, brine sampling and geo-statistic reservoir modeling in order to estimate brine volumes and their composition. To evaluate reserves, we conduct a geostatistical study using the Kriging Method in 2D. We calculate the quality of brine effectively drainable or exploitable in each evaluation unit. We consider chemical parameters to determine the process to be applied to the brines. Based on the chemical characteristics, the volume of brine and drainable porosity, we determine the number of metric tons for each of the chemical ions. Proven reserves are defined as those geographical blocks that comply with a Kriging method estimation error of up to 15%. In the case of probable reserves, the selected blocks must comply with an estimation error between 15% and 35%. Blocks with an error greater than 35% are not considered in the evaluation of reserves. This procedure is used to estimate potential restrictions on production yields and the economic feasibility of producing such commercial products as potassium chloride, potassium sulfate, lithium carbonate and boric acid is determined on the basis of the evaluation.

Ports and water rights

We operate port facilities at Tocopilla in northern Chile for shipment of products and delivery of certain raw materials pursuant to renewable concessions granted by Chilean regulatory authorities, provided that such facilities are used as authorized and annual concession fees are paid by us. We also hold water rights for the supply of water from rivers and wells near our production facilities sufficient to meet our current operational requirements.

Transportation and storage facilities

We own and operate railway lines and equipment, as well as port and storage facilities, for the transport and handling of finished products and consumable materials.

Our main center for production and storage of raw materials is the hub composed of the facilities in Coya Sur - Pedro de Valdivia and the Salar de Atacama facilities. Other facilities include Nueva Victoria and the lithium carbonate and lithium hydroxide finishing plants. The Tocopilla port terminal ("Tocopilla Port Terminal"), which we own, is the main facility for storage and shipment of our products.

Nitrate raw materials are produced and first stored at our Pedro de Valdivia mine, and then transported by trucks to the plants described in the next paragraph, for further processing. Nitrate raw material is also produced at Nueva Victoria, from where it is transported by trucks to Coya Sur for further processing.

Nitrate finished products are produced at our facilities in Coya Sur and then transported by our rail system to Tocopilla Port Terminal, where they are stored and shipped, either bagged or in bulk. Potassium chloride is produced at our facilities in the Salar de Atacama and transported either to Tocopilla Port Terminal or Coya Sur by truck owned by a third-party dedicated contractor. Products transported to Coya Sur are used as a raw material for the production of potassium nitrate. Potassium sulfate and boric acid are both produced at our facilities in the Salar de Atacama and are then transported by trucks to the Tocopilla Port Terminal.

Lithium solutions, produced at our facilities in the Salar de Atacama, are transported to the lithium carbonate facility in the Salar del Carmen area, where finished lithium carbonate is produced. Part of the lithium carbonate is fed to the adjacent lithium hydroxide plant, where finished lithium hydroxide is produced. These two products are bagged and stored on the premises and are subsequently transported by truck to the Tocopilla Port Terminal or to the Antofagasta and Mejillones terminals for shipment on charter vessels or container vessels.

Iodine raw material, obtained in the same mines as the nitrates, is processed, bagged and stored exclusively in the facilities of Pedro de Valdivia and Nueva Victoria, and then shipped by truck to Antofagasta, Mejillones or Iquique for vessel container transport or by truck to Santiago, where iodine derivatives are produced.

The facilities at Tocopilla Port Terminal are located approximately 186 kilometers north of Antofagasta and approximately 124 kilometers west of Pedro de Valdivia, 84 kilometers west of María Elena and Coya Sur and 372 kilometers west of the Salar de Atacama. Our subsidiary, Servicios Integrales de Tránsitos y Transferencias S.A. (SIT) operates the facilities under maritime concessions granted pursuant to applicable Chilean laws. The port also complies with ISPS (International Ship and Port Facility Security Code) regulation. The Tocopilla Port Terminal facilities include a railcar dumper to transfer bulk product into the conveyor belt system used to store and ship bulk product.

Storage facilities consist of a six silo system, with a total production capacity of 55,000 metric tons, and an open storage area for approximately 250,000 metric tons. Additionally, to meet future storage needs, we will continue to make investments in accordance with the investment plan outlined by management. Products are also bagged at port facilities in Tocopilla, where the bagging capacity is approximately 300,000 metric tons per year.

For shipping bulk product, the conveyor belt system extends over the coast line to deliver product directly inside bulk carrier hatches. Using this system, the loading capacity is 1,200 tons per hour. Bags are loaded to bulk vessels using barges that are loaded in the Tocopilla Port Terminal dock and unloaded by vessel cranes into the hatches. Both bulk and bagged trucks are loaded in Tocopilla Port Terminal for transferring product directly to customers or for container vessels shipping from other ports, mainly Antofagasta, Mejillones and Iquique.

Bulk carrier loading in the Tocopilla Port Terminal is mostly contracted to transfer product to our hubs around the world or for shipping to customers, which in limited cases use their own contracted vessels for delivery. Trucking is provided by a mix of spot, contracted and customer- owned equipment.

Tocopilla processes related to the reception, handling, storage, and shipment of bulk/packaged nitrates produced in Coya Sur are certified by third party organization TÜV-Rheiland under the quality standard ISO 9001:2008.

Research and development, patents and licenses

One of the main objectives of our research and development team is to develop new processes and products in order to maximize the returns obtained from the resources that we exploit. Our research is performed by four different units whose research topics include chemical process design, phase chemistry, chemical analysis methodologies and

physical properties of finished products.

Our research and development policy emphasizes the following: (i) optimization of current processes in order to decrease costs and improve product quality through the implementation of new technology, and (ii) development of higher-margin products from current products through vertical integration or different product specifications.

Our research and development activities have been instrumental in improving our production processes and developing new value-added products. As a result of research and development activities, new methods of extraction, crystallization and finishing products have been developed. Technological advances in recent years have enabled us to improve process efficiency for the nitrate, potassium and lithium operations, to improve the physical quality of our prilled products and to reduce dust emissions and caking by applying specially designed additives for our products handled in bulk. Our research and development efforts have also resulted in new, value-added markets for our products. One example is the use of sodium nitrate and potassium nitrate as thermal storage in solar power plants.

We have patented several production processes for nitrate, iodine, and lithium products. These patents have been filed mainly in the United States, Chile, and in other countries when necessary.

Employees

As of December 31, 2012, we had 5,643 permanent employees, 193 of whom were employed outside of Chile. The average tenure of our permanent employees is approximately 6.5 years.

| | As of December 31, | | | |
|----------------------------|--------------------|-------|-------|-------|
| | 2012 | 2011 | 2010 | 2009 |
| Employees in Chile | 5,450 | 4,720 | 4,073 | 4,161 |
| Employees outside of Chile | 193 | 182 | 254 | 226 |
| Total employees | 5,643 | 4,902 | 4,327 | 4,387 |

As of December 31, 2012, 67% of our permanent employees in Chile were represented by 24 labor unions, which represent their members in collective negotiations with us. Compensation for unionized personnel is established in accordance with the relevant collective bargaining agreements. The terms of most such agreements currently in effect are three years, and expiration dates of such agreements vary from contract to contract. Under these agreements, employees receive a salary according to a scale that depends upon job function, seniority and productivity. Unionized employees also receive certain benefits provided by law and certain benefits provided under the applicable collective bargaining agreement, which vary depending upon the terms of the collective agreement, such as housing allowances and additional death and disability benefits.

In addition, we own all of the equity of Institución de Salud Previsional Norte Grande Limitada (“Isapre Norte Grande”), which is a health care organization that provides medical services primarily to our employees and Sociedad Prestadora de Servicios de Salud Cruz de Norte S.A. (“Prestadora”), which is a hospital in María Elena. We make contributions to Isapre Norte Grande and to Prestadora in accordance with Chilean laws and the provisions of our various collective bargaining agreements, but we are not otherwise responsible for its liabilities.

Non-unionized employees receive individually negotiated salaries, benefits provided for by law and certain additional benefits which we provide.

We provide housing and other facilities and services for employees and their families at the María Elena site.

We do not maintain any pension or retirement programs for our Chilean employees. Most workers in Chile are subject to a national pension law, adopted in 1980, which establishes a system of independent pension plans that are administered by the corresponding Sociedad Administradora de Fondos de Pensiones. We have no liability for the performance of any of these pension plans or any pension payments to be made to our employees. We, however, sponsor staff severance indemnities plans for our employees and employees of our Chilean subsidiaries whereby we commit to provide a lump sum payment to each employee at the end of his/her employment, whether due to death, termination, resignation or retirement.

As in previous years, during 2012, we negotiated collective labor contracts with individual unions one year before their agreement ended. As of December 2012, we have concluded advanced negotiations with 22 labor unions, which represent 96% our total unionized workers, signing new agreements each for durations of three years.

Legal proceedings

We are party to various lawsuits arising in the ordinary course of business. For more information on these lawsuits, see note 16.1 to our audited financial statements included below. We believe it is unlikely that any losses associated with such lawsuits will significantly affect our result of operations, financial position, and cash flows

Report of Independent Registered Public Accounting Firm

To the Shareholders and the Board of Directors of

Sociedad Química y Minera de Chile S.A.:

We have audited the accompanying consolidated statement of financial position of Sociedad Química y Minera de Chile S.A. and subsidiaries (“the Company”) as of December 31, 2010 and the related consolidated statements of comprehensive income, changes in equity and cash flows for the year ended December 31, 2010. These financial statements are the responsibility of the Company’s management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States of America). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the consolidated financial position of Sociedad Química y Minera de Chile S.A. and subsidiaries as of December 31, 2010, and the consolidated results of their operations and their cash flows for the year ended December 31, 2010, in conformity with International Financial Reporting Standards (IFRS), as issued by the International Accounting Standards Board (“IASB”)

ERNST & YOUNG LTDA.

F-14

Notes to the consolidated financial statements as of December 31, 2012

Note 1 – Identification and Activities of the Company and Subsidiaries

1.1 Historical background

Sociedad Química y Minera de Chile S.A. (the “Company” or “SQM”) is an open stock corporation organized under the laws of the Republic of Chile, Tax Identification N° 93.007.000-9. The Company was constituted by public deed issued on June 17, 1968 by the Notary Public of Santiago, Mr. Sergio Rodríguez Garcés. Its existence was approved by Decree No. 1,164 on June 22, 1968 by the Ministry of Finance, and it was registered on June 29, 1968 in the Registry of Commerce of Santiago, on page 4,537 N° 1,992. SQM's headquarters are located at El Trovador 4285, Fl. 6, Las Condes, Santiago, Chile. The Company's telephone number is +56 2 425-2000.

The Company is registered with the Securities Registry of the Chilean Superintendence of Securities and Insurance (“SVS”) under No. 0184 dated March 18. 1983 and is subject to the inspection of the SVS.

1.2 Main domicile where the Company performs its production activities

The Company’s main domiciles are: Calle Dos Sur plot No. 5 - Antofagasta; Arturo Prat 1060 - Tocopilla; Administración Building w/n - Maria Elena; Administración Building w/n Pedro de Valdivia - María Elena, Former Florencia office w/n - Sierra Gorda, Anibal Pinto 3228 - Antofagasta, Kilometer 1378 5 Norte Highway - Antofagasta, Coya Sur Plant w/n - Maria Elena, kilometer 1760 5 Norte Highway - Pozo Almonte, Pampa Yumbes w/n - Tal-tal.

1.3 Codes of main activities

The codes of the main activities as established by the SVS include codes:

- 1700 Mining
- 2200 Chemical products
- 1300 Investment

1.4 Description of the nature of operations and main activities

The Company's products are mainly derived from mineral deposits found in northern Chile, where the Company mine and processes caliche ore and brine deposits. The caliche ore in northern Chile is the world's largest commercially exploited source of natural nitrates and contains the only known nitrate and iodine deposits in the world. The Brine deposits of the Salar de Atacama, a salt-encrusted depression within the Atacama desert in northern Chile, contain high concentrations of lithium and potassium as well as significant concentrations of sulfate and boron.

F-15

Notes to the consolidated financial statements as of December 31, 2012

Note 1 – Identification and Activities of the Company and Subsidiaries (continued)

1.4 Description of the nature of operations and main activities, continued

From the Company's caliche ore deposits, the Company produces a wide range of nitrate-based products used for specialty plant nutrients and industrial applications, as well as iodine and iodine derivatives. At the Salar de Atacama, it extracts brines rich in potassium, lithium, sulfate and boron in order to produce potassium chloride, potassium sulfate, lithium solutions, boric acid and bischofite (magnesium chloride). The Company produces lithium carbonate and lithium hydroxide at its plant near the city of Antofagasta, Chile, from solutions delivered from the Salar de Atacama. The Company markets all of these products through an established worldwide distribution network, in more than 110 countries worldwide and generates most of its revenue from foreign countries.

The Company's products are divided into six categories, which are also classified as operating segments: specialty plant nutrition, iodine and derivatives, lithium and derivatives, industrial chemicals, potassium, and other products and services, each of which is described below.

Specialty plant nutrients: This segment is characterized by being closely related to its customers for which employs specialized staff who provide expert advice in best practices for fertilization according to each type of crop, soil and climate. Within this segment, potassium derivative products and specially potassium nitrate have a leading role in their contribution crop to development ensuring improvements in post-crop life, in addition to improving quality, flavor and fruit color. Potassium nitrate, which is sold in multiple formats and as a part of other specialty mixtures, is complemented by sodium nitrate, potassium sodium nitrate, and more than 200 fertilizing mixtures.

Iodine and derivatives: The Company is the largest producer of iodine in the world, which is a product widely used in the pharmaceutical, technology and nutrition industries. Additionally, iodine is used as X-ray contrast media and polarizing film for LCD displays.

Lithium and derivatives: The Company's lithium is mainly used for manufacturing rechargeable batteries for cell phones, cameras and notebooks. Through the manufacturing of lithium-based products, SQM provides significant materials to address challenges such as the efficient use of energy and raw materials. Lithium is not only used for rechargeable batteries and in new technologies for electric vehicles, but is also used in industrial applications to lower melting temperature and to help reduce energy costs.

F-16

Notes to the consolidated financial statements as of December 31, 2012

Note 1 – Identification and Activities of the Company and Subsidiaries (continued)

1.4 Description of the nature of operations and main activities, continued

Industrial Chemicals: Industrial chemicals products are used as supplies for a number of production processes. SQM has more than 30 years of experience participating in this segment producing sodium nitrate, potassium nitrate, boric acid and potassium chloride. Industrial nitrates have increased in importance over the last few years due to their use as storage means for thermal energy at solar energy plants, which are widely used in countries such as Spain and the United States in their search for decreasing CO₂ emissions.

Potassium: Potassium is a primary essential macro-nutrient, and even though it does not form part of the plant's structure, has a significant role for developing basic crop functions, improving quality, increasing post-crop life, improving flavor, its amount of vitamins and its physical appearance. This segment also includes potassium chlorate and potassium sulfate, both extracted from the salt layer located under the Salar de Atacama.

Other products and services: Includes revenues from commodities, provision of services, interest, royalties and dividends.

1.5

Other background

Employees

As of December 31, 2012, 2011 and 2010, the Company's permanent employees were 5,643, 4,902 and 4,327, respectively.

Notes to the consolidated financial statements as of December 31, 2012

Note 2 - Bases of presentation for consolidated financial statements (continued)

2.1

Financial statements

The consolidated financial statements of Sociedad Química y Minera de Chile S.A. and subsidiaries, have been prepared in accordance with International Financial Reporting Standards (IFRS) and represent the full, explicit issued by the International Accounting Standards Board (IASB).

The accounting policies used in the preparation of these consolidated Financial Statements are described below and comply with each IFRS in force at their date of presentation.

2.2

Basis of measurement

The consolidated financial statements have been prepared on the historical cost basis except for the following material items:

- inventories are recorded at the lower of cost and net realizable value;
- other current and non-current financial liabilities are carried at amortized cost;
- financial derivatives are presented at fair value; and
- staff severance indemnities and pension commitments are recorded at actuarial value.

F-20

Notes to the consolidated financial statements as of December 31, 2012

Note 2 - Bases of presentation for consolidated financial statements (continued)

2.3

Accounting pronouncements

Accounting pronouncements

At the date of these consolidated financial statements, the following accounting pronouncements have been issued by the IASB for which term application date is not yet effective.

| Standards | Mandatory application for periods beginning: |
|---|---|
| IAS 19 Employee Benefits | January 1, 2013 |
| IAS 27 Separate Financial Statements | January 1, 2013 |
| IAS 28 Associates and Joint Ventures | January 1, 2013 |
| IFRS 9 Financial Instruments | January 1, 2013 |
| IFRS 10 Consolidated financial statements | January 1, 2013 |
| IFRS 11 Joint arrangements | January 1, 2013 |
| IFRS 12 Disclosure of Interests in Other Entities | January 1, 2013 |
| IFRS 13 Fair Value Measurement | January 1, 2013 |

IAS 19 Revised “Employee Benefits”

Issued in June 2011, supersedes IAS 19 (1998). This revised standard amends the recognition and measurement of defined benefit plan expenses and termination benefits. Additionally, it includes amendments to disclosures of all employee benefits.

IAS 27 “Separate Financial Statements”

Issued in May 2011, supersedes IAS 27 (2008). The scope of this standard is restricted solely to separate financial statements, given that the aspects linked to the definition of control and consolidation were removed and included in IFRS 10. Its early adoption is allowed together with IFRS 10, IFRS 11 and IFRS 12 and the amendment to IAS 28.

IAS 28 "Associates and Joint Ventures"

Issued in May 2011, supersedes IAS 28 (2003). It includes the requirements for associates and joint ventures that have to be equity accounted following the issue of IFRS 11. Its early adoption is allowed together with IFRS 10, IFRS 11 and IFRS 12 and the amendment to IAS 27.

IFRS 9 "Financial Instruments"

Issued in December 2009, amends the classification and measurement of financial assets.

Subsequently, this standard was amended in November 2010 to include the treatment and classification of financial liabilities. Early adoption is permitted.

IFRS 10 "Consolidated Financial Statements"

Issued in May 2011, supersedes SIC 12 "Consolidation – Special Purpose Entities" and portions of IAS 27 "Consolidated Financial Statements". It establishes clarifications and new parameters for the definition of control, as well as the preparation of consolidated financial statements. Its early adoption is permitted together with IFRS 11, IFRS 12 and amendments to IAS 27 and IAS 28.

Notes to the consolidated financial statements as of December 31, 2012

Note 2 - Bases of presentation for consolidated financial statements (continued)

2.3

Accounting pronouncements, continued

IFRS 11 “Joint Arrangements”

Issued in May 2011, supersedes IAS 31 “Interests in Joint Ventures” and SIC 13 “Joint Controlled Entities”. Its amendments include the elimination of the concept of jointly-controlled assets and the possibility of proportional consolidation of entities under common control. Its early adoption is permitted together with IFRS 10, IFRS 12 and amendments to IAS 27 and IAS 28.

IFRS 12 “Disclosure of Interests in Other Entities”

Issued in May 2011, is applicable for entities with investments in subsidiaries, joint ventures and associates. Its early adoption is permitted together with IFRS 10, IFRS 11 and amendments to IAS 27 and IAS 28.

IFRS 13 “Fair Value Measurement”

Issued in May 2011, gathers in one single standard the method for measuring fair value of assets and liabilities and disclosures required for this purpose and incorporates new concepts and clarifications for measurement.

Mandatory

| Improvements and Amendments | | application for: |
|------------------------------------|--|-------------------------|
| IAS 1 | Presentation of Financial Statements | July 1, 2012 |
| IFRS 7 | Financial Instruments: Information to be disclosed | January 1, 2013 |
| IAS 32 | Financial Instruments: Presentation | January 1, 2014 |
| IAS 16 | Property, Plant and Equipment | January 1, 2013 |
| IAS 32 | Financial Instruments: Presentation | January 1, 2013 |
| IAS 34 | Intermediate Financial Information | January 1, 2013 |
| IFRS 10 | Consolidated Financial Statements | January 1, 2013 |
| IFRS 11 | Joint Agreements | January 1, 2013 |
| IFRS 12 | Disclosures of participation in other entities | January 1, 2013 |

IAS 1 “Presentation of Financial Statements”

Issued in June 2011, the main amendment is that it requires that items in Other Comprehensive Income must be classified and grouped by assessing whether they will be reclassified to subsequent periods. Early adoption of the new classification requirements is permitted.

IFRS 7 “Financial Instruments: Information to be disclosed”

Issued in December 2011. Improves disclosures of compensation of financial assets and liabilities, in order to increase the convergence between IFRS and Generally Accepted Accounting Principles in the United States. These disclosures are centered on quantitative information related to financial instruments, which are included in the consolidated financial statements. Its early adoption is permitted.

IAS 32 “Financial Instruments: Presentation”

Issued in December 2011. Explains the requirements for the compensation of financial assets and liabilities. Specifically, it indicates that the right to compensation must be available as of the date of the financial statements and not dependent on a future event. The right to compensation also must be legally binding for the counterparty in the normal course of the business, as well as in cases of non payment, insolvency, or bankruptcy. Its early adoption is permitted.

Notes to the consolidated financial statements as of December 31, 2012

Note 2 - Bases of presentation for consolidated financial statements (continued)

IAS 16 “Property, Plant, and Equipment”

Issued in May 2012. Clarifies that spare parts and service equipment should be classified as Property, Plant, and Equipment, instead of inventories, whenever it meets the definition of Property, Plant, and Equipment.

IAS 32 “Presentation of Financial Instruments”

Issued in May 2012. Clarifies that the treatment of income taxes related to equity distributions and transaction costs.

IAS 34 “Intermediate Financial Information”

Issued in May 2012. Clarifies the requirements to present assets and liabilities by segments, during interim periods, confirming the same requirements applicable to the annual financial statements.

IFRS 10 Consolidated Financial Statements, IFRS 11 “Joint Agreements”, IFRS 12 Disclosures of participation in other entities”

Issued in June 2012. Clarifies that it is necessary to apply these standards on the first day of the annual period in which the regulations are adopted. Therefore, it could be necessary to make modifications to comparative information presented in such periods, if the evaluation of control over investments results in that recognized according to IAS 27/SIC 12.

Management is currently evaluating the adoption of the standards, amendments and interpretations described above; however, they are not expected to have a significant impact on the consolidated financial statements.

Notes to the consolidated financial statements as of December 31, 2012

Note 2 - Basis of presentation for consolidated financial statements (continued)

2.4 Transactions in foreign currency

(a) Functional and presentation currency

The Company's consolidated financial statements are presented in United States Dollars ("U.S. Dollars" or "US\$"), which is the Company's functional and presentation currency and is the currency of the primary economic environment in which it operates.

Consequently, the term foreign currency is defined as any currency other than the U.S. Dollar.

The conversion of the financial statements of foreign subsidiaries with functional currency other than the U.S. Dollars is performed as follows:

- Assets and liabilities using the exchange rate prevailing on the closing date of the consolidated financial statements.
- Statement of income account items using average exchange rates for the year.
- Equity accounts are stated at the historical exchange rate on the transaction date.

Foreign currency translation differences which arise from the conversion of financial statements of subsidiaries are recorded in the account "Foreign currency translation differences" within equity.

(b) Basis of conversion

Domestic subsidiaries:

Assets and liabilities denominated in Chilean Pesos and other currencies other than U.S. Dollar as of December 31, 2012 and December 31, 2011 have been translated to U.S. Dollars at the exchange rates prevailing on those dates. The corresponding Chilean Pesos were converted at Ch\$479,96, Ch\$519.20 and Ch\$468.01 per US\$1.00 as of December 31, 2012, 2011 and 2010 respectively.

The values of the UF (a Chilean Peso-denominated, inflation-indexed monetary unit) used to convert the UF denominated assets and liabilities as of December 31, 2012 amounted to Ch\$22,840.75 (US\$47,59), Ch\$22,294.03 (US\$42.94) and Ch\$21,455.55 (US\$45.84) as of December 31, 2012, 2011 and 2010 respectively.

F-24

Notes to the consolidated financial statements as of December 31, 2012

Note 2 - Basis of presentation for consolidated financial statements (continued)

2.4 Transactions in foreign currency, (continued)

Foreign subsidiaries

The exchange rates used to translate the monetary assets and liabilities expressed in foreign currencies at the closing date of each period in respect to the U.S. Dollar are as follows:

| | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|--------------------|------------|------------|------------|
| | US\$ | US\$ | US\$ |
| Brazilian Real | 2.04 | 1.88 | 1.66 |
| New Peruvian Sol | 2.75 | 2.77 | 2.81 |
| Argentinean Peso | 4.92 | 4.30 | 3.98 |
| Japanese Yen | 86.58 | 77.74 | 81.49 |
| Euro | 0.76 | 0.77 | 0.75 |
| Mexican Peso | 12.99 | 13.98 | 12.38 |
| Australian Dollar | 1.05 | 1.03 | 1.01 |
| Pound Sterling | 0.62 | 0.64 | 0.64 |
| South African Rand | 8.47 | 8.10 | 6.63 |
| Ecuadorian Dollar | 1.00 | 1.00 | 1.00 |
| Chilean Peso | 479.96 | 519.20 | 468.01 |
| UF | 47.59 | 42.94 | 45.84 |

(c) Transactions and balances

Non-monetary transactions and balances denominated in a currency other than the U.S. Dollar are translated using the exchange rate in at the transaction date. Monetary assets and liabilities denominated in a foreign currency are translated at the exchange rate of the functional currency prevailing at the closing date of the Consolidated Statement of Financial Position. All differences are recorded to the Statement of Income with the exception of all monetary items that provide an effective hedge for a net investment in a foreign operation. These items are recognized in Other Comprehensive Income upon the disposal of the investment, at which time they are recognized in the Statement of Income. Tax charges and credits attributable to exchange differences on those monetary items are also recorded in Other Comprehensive Income.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates at the dates of the initial transactions. Non-monetary items measured at fair value in a foreign currency are translated using the exchange rates at the date when the fair value is determined.

F-25

Notes to the consolidated financial statements as of December 31, 2012

Note 2 - Basis of presentation for consolidated financial statements (continued)

2.4 Transactions in foreign currency, continued

(d) Group entities

The profit or loss, assets and liabilities of all entities with a functional currency other than the U.S. Dollar are translated to the presentation currency as follows:

Assets and liabilities are translated at the closing date exchange rate as of the date of the Consolidated Statement of Financial Position.

- Income and expenses are translated at average exchange rates for the year.

All resulting foreign currency exchange differences are recognized in the foreign currency translation difference reserve in Equity.

In consolidation, foreign currency exchange differences which arise from the conversion of a net investment in foreign entities are recorded Equity (other reserves). At the disposal date, these exchange differences are recognized in the Statement of Comprehensive Income as part of the gain or loss from the sale.

2.5 Basis of consolidation

(a) Subsidiaries

Subsidiaries are all entities over which the Company has the ability to govern financial and operating policies generally, accompanying a shareholding of more than one half of the voting rights. The Company also assesses the existence of control where it does not have more than 50% of the voting power but is able to govern the financial and operating policies by virtue of de-facto control. De-facto control may arise in circumstance where the size of the group's voting rights relative to the size and dispersion of holding of other shareholders give the Company power to govern the financial and operating policies.

Subsidiaries are consolidated from the date in which control is transferred to the Company and are excluded from consolidation on the date in which this control ceases to exit.

Intercompany transactions, balances, income and expenses on transactions between group companies are eliminated. Profits and losses resulting from intercompany transactions that are recognized in assets are also eliminated. All subsidiaries apply the same accounting policies as described in Note 3.

Non-controlling interest represent the portion of a subsidiary is net assets and operating results not owned directly or indirectly by the parent company.

- (a) On December 14, 2011, Fertilizantes Naturales S.A. changed its legal name to SQM Iberian S.A.
- (b) Effective November 30, 2012, this entity was merged with SQM Potasio S.A.
- (c) Comercial Agrorama Ltda. is consolidated as the Company has control through its subsidiary Soquimich Comercial S.A.
- (d) This subsidiary was incorporated on April 7, 2011.

F-29

Notes to the consolidated financial statements as of December 31, 2012

Note 2 - Basis of presentation for consolidated financial statements (continued)

2.5 Basis of consolidation, continued

(b) Equity accounted investments

Interests in companies in which control is exercised together with another company (joint ventures) or in which the Company has significant influence (associated companies) are accounted for using the equity method. Significant influence is assumed to exist when the Company has interest exceeding 20% of the investee's equity. Under the equity method, the investment is initially recognize at cost, and the carrying amount is increased or decreased to recognize the Company's share of the profit or loss of the investee after the acquisition date. The Company's investments include goodwill identified upon acquisition.

The Company's share of post acquisition profit or loss is recognized in the Statement of Income. When the Company's share of losses in an investee equals or exceeds its interest, the Company does not recognize further losses unless it has incurred a legal or constructive obligations or made payments on behalf of the investee.

The Company determines at each reporting date whether there is any objective evidence that the investments are impaired. If impaired, the Company recognizes an impairment loss in the Statement of Income as the difference between the recoverable amount of the investee and its carrying value.

Unrealized profits and losses resulting from transactions with investees are recognized in the consolidated financial statements to the extent of unrelated investor's interest in the investee. Unrealized losses are eliminated unless the transaction provides evidence of loss from impairment of the assets transferred. The reporting dates and accounting policies of the investees are consistent with those adopted by the Company.

2.6 Segment reporting

Operating segments are reported in a manner consistent with the internal reporting provided to the chief operating decision maker ("CODM"). The CODM, who is responsible for allocating reserves and assessing performance of the operating segments, has been identified as a committee comprised of the Chief Executive Officer, and the Executive

Vice President & Chief Operating Officer. The following operating segments are based on the information provided to the CODM and the organizational structure of the Company:

- Specialty plant nutrients
- Industrial chemicals
- Iodine and derivatives
- Lithium and derivatives
- Potassium
- Other products and services

F-30

Notes to the consolidated financial statements as of December 31, 2012

Note 2 - Basis of presentation for consolidated financial statements (continued)

2.7 Significant accounting judgments, estimates and assumptions

Significant accounting judgments, estimates and assumptions by management to prepare these consolidated financial statements include:

- The useful lives of tangible and intangible assets and their residual values.
- Impairment evaluations of certain assets, including trade and other accounts receivable.
- Assumptions used for impairment the actuarial calculation of liabilities for employee pensions and staff severance indemnities.
- Inventory provisions allowances on slow-moving obsolete in inventories.
- Future costs for and the timing of the closure of mining facilities.
- The determination of the fair value of certain financial and non-financial assets and derivative financial instruments.
- The determination and allocation of fair values in business combinations.

Although these estimates have been made considering information available as of the date of preparation of these consolidated financial statements, it is possible that future events may require their modification. Changes would be recorded prospectively, recognizing the effects of any changes in estimates in future consolidated financial statements. There have been no significant changes in the methodology or assumptions used in these estimates.

Notes to the consolidated financial statements as of December 31, 2012

Note 3 – Significant accounting policies

3.1 Cash and cash equivalents

Cash equivalents consist of short-term, highly liquid investments that are readily convertible into known amounts of cash and are subject to low risk of change in value, with original maturities of three months or less from the date of acquisition.

3.2 Financial assets

The Company classifies its financial assets under the following categories: at fair value through profit or loss, loans and trade receivables, financial assets held-to-maturity and financial assets available-for-sale. The classification depends on the purpose for which financial assets were acquired. Management determines the classification of its financial assets at the time of initial recognition.

At each reporting date management assesses whether there is any objective evidence that a financial asset or a group of financial assets is impaired. A financial asset or a group of assets is deemed to be impaired if and only if there is objective evidence of impairment as a result of one or more events that has occurred after the initial recognition of the asset or group of assets (a “loss event”) and that loss event or events has an impact on the estimated future cash flows of the financial asset or the group of financial assets that can be reliably estimated.

(a) Financial assets at fair value through profit or loss

Financial assets at fair value through profit or loss are financial assets held for trading. A financial asset is classified in this category if it is acquired mainly for the purpose of being sold in the short-term. Derivatives are also classified as acquired for trading unless they are designated as hedges. Assets under this category are classified as current assets if expected to be settled within 12 months, and their changes in fair value are directly recognized in profit or loss.

(b) Loans and trade receivables

Loans and trade receivables are non-derivative financial assets with fixed or determinable payments not quoted in any active market. These are included in current assets, except for maturities greater than 12 months from the end of the reporting period, which are classified as non-current assets. The Company's loans and receivables consist of "trade and other accounts receivable" and "cash and cash equivalents" in the Statement of Financial Position (notes 6.1 and 9.2).

(c) Financial assets held to maturity

Financial assets held-to-maturity are non-derivative financial assets with fixed or determinable payments and fixed maturities which management has the positive intention and ability of holding to maturity. If a significant amount of financial assets held to maturity were to be sold, the full category would be reclassified as available for sale. Assets in this category are stated at amortized cost.

Notes to the consolidated financial statements as of December 31, 2012

Note 3 – Significant accounting policies (continued)

3.3 Financial derivatives and hedge transactions

Derivatives are recognized initially at fair value as of the date in which the derivative contract is entered into and subsequently remeasured at fair value. The method for recognizing the resulting gain or loss depends on whether the derivative has been designated as a hedge instrument and if so, the nature of the item being hedged. The Company designates certain derivatives as either:

- (a) Fair value hedges of recognized assets and liabilities or firm commitments (fair value hedges).
- (b) Hedging a forecasted risk associated with a recognized asset or liability or a highly possible forecasted transaction (cash flow hedge).

At hedge inception, the Company documents the relationship between hedging instruments and hedged items, as well as their risk management objectives, and the strategy for undertaking different hedging transactions. The Company also documents its evaluation both at hedge inception and at each reporting period, whether derivatives used in hedging transactions are highly effective in offsetting changes in fair values or in cash flows of hedged items.

The fair value of derivative instruments used for hedging purposes is shown in Note 10.3. (Hedge assets). Movements in the cash flow hedge reserve are classified as a non-current asset or liability if the remaining hedged item is more than 12 months, and as a current asset or liability if the remaining maturity of the hedged item is less than 12 months. Other derivatives are classified as a current asset or current liability, with the change in their fair value recognized directly in profit or loss.

- (a) Fair value hedge

Changes in the fair value derivatives that are designated and qualify as fair value hedges are recorded to profit or loss, as applicable. The change in the fair value of the hedged asset or liability attributable to hedged risk is also recognized in profit or loss.

For fair value hedges related to assets or liabilities recorded at amortized cost, the adjustment of the fair value is amortized against profit or loss during the period through maturity. Any adjustment to the carrying value of a hedged financial instrument for which the effective rate is used is amortized to profit or loss at its fair value attributable to the hedged risk.

F-33

Notes to the consolidated financial statements as of December 31, 2012

Note 3 – Significant accounting policies (continued)

If the hedge no longer meets the criteria for hedge accounting, the fair value not amortized is immediately recognized in profit or loss.

(b)

Cash flow hedges

The effective portion of changes in the fair value of derivatives that are designated and qualify as cash flow hedges is recognized in other reserves within equity. The gain or loss related to the ineffective portion is immediately recognized in profit or loss.

Amounts accumulated in equity are reclassified to profit or loss in periods when the hedged item affects profit or loss, such as when the hedged interest income or expense is recognized, or when a forecasted transaction occurs. When the hedged item is the cost of a non-financial asset or liability, amounts recorded in equity are transferred to the initial carrying value of the non-financial asset or liability.

Should the expected firm transaction or commitment no longer be expected to occur, amounts previously recognized in equity are transferred to profit or loss. If a hedge instrument expires or is sold, or when a hedge no longer meets the criteria for hedge accounting, any amounts previously recognized in equity are maintained in equity until the expected firm transaction is ultimately recognized in profit or loss.

3.4

Trade and other receivables

Trade and other receivables relate to non-derivative financial assets with fixed and determinable payments and are not quoted in any active market. These receivables arise from sales involving products and services to customers.

These assets are initially recognized at their fair value, which is equivalent to their face value, and subsequently at amortized cost according to the effective interest rate method less a provision for impairment loss. An allowance for impairment loss is established for trade receivables when there is objective evidence that the Company will not be able to collect amounts which are owed to it according to the original terms of receivables.

3.5

Inventory

Inventories are stated at the lower of cost and net realizable value. Cost is determined based on the weighted average method. The cost of finished goods and products-in-process includes direct costs of materials, direct labor, and other direct costs and related overheads incurred to transform raw materials into finished products, including expenses incurred in transporting inventories to their current location and condition. Net realizable value represents is the estimated sales price in the ordinary course of business less all estimated costs expected to be incurred in the sales and distribution process.

The Company evaluates the net realizable value of inventories at the end of each reporting period, recording a provision with a charge to income when circumstances are warranted. When the circumstances previously causing the reserve cease to exist, or when there is clear evidence of an increase in the net realizable value due to a change in the economic circumstances or prices, the previous estimate is modified accordingly. Provisions on the Company's inventories are made based on a technical studies covering the different variables affecting finished products such as density and humidity, among other factors.

Notes to the consolidated financial statements as of December 31, 2012

Note 3 – Significant accounting policies (continued)

Raw materials, and supplies for production inventories are recorded at the lower of acquisition cost or market value. Acquisition cost is calculated according to the weighted average cost method.

3.6

Intangible assets

Intangible assets consist of goodwill, water rights, rights of ways related to electric lines, and computer software licenses.

(a)

Goodwill

Goodwill represents the excess of the consideration transferred over the net fair value of assets acquired and liabilities assumed in the acquisition of subsidiaries.

For purposes of impairment testing, goodwill acquired in a business combination is allocated to each cash generating unit “CGU”, which is expected to benefit from the synergies of the combination. Each CGU to which goodwill is allocated represents the lowest level within the entity at which the goodwill is monitored for internal management purposes.

Goodwill impairment reviews are conducted annually, or more frequently if events or changes in circumstances indicate a potential for impairment. The carrying value of goodwill is compared to its recoverable amount, which is the higher of value in use and the fair valueless cost to sell. Any impairment is recognized immediately as an expense and is not subsequently reversed.

(b)

Water rights

Acquired water rights represent water from natural sources and are recorded at acquisition cost. Depending on the contractual terms, water rights can be granted on a perpetual basis or be subject to a fixed term. Water rights with a

contractual fixed term are amortized over the life of the agreement. Water rights granted on a perpetual basis are not amortized; however, they are subject to an annual impairment assessment.

(c) Right of way for electric lines

As required for the operation of industrial plants, the Company acquires rights of ways in order to install wires for electric lines on third party land. Amounts paid are capitalized and charged to income according to their contractual lives.

F-35

Notes to the consolidated financial statements as of December 31, 2012

Note 3 – Significant accounting policies (continued)

(d) Computer software

Acquired computer software licenses are capitalized based on initial acquisition costs and costs incurred to prepare them for their intended use. These costs are amortized over their estimated useful lives.

Expenses related to internally developed IT programs are recognized when incurred. Costs directly attributable to the development of unique and identifiable IT programs are recognized as intangible assets to the extent such IT will generate future economic benefits. IT development costs are amortized over their estimated useful lives, which does generally not exceed three years.

3.7 Property, plant and equipment

Property, plant and equipment assets are stated at acquisition cost, net of accumulated depreciation, amortization and impairment losses that they might have experienced. Acquisition cost includes the following when applicable:

(a) Interest expense incurred during the construction period directly attributable to the acquisition, construction or production of qualifying assets, includes those that require a substantial period prior to being ready for their intended use. The interest rate used to capitalize interest corresponds to the project's specific financing or, should this not exist, the average borrowing rate of Company. Interest expenses are not capitalized for periods which exceed the normal term of acquisition, construction or installation of the asset, such as in the case of delays, interruptions, or temporary suspension of the project due to technical, financial, or other issues.

(b) Future costs the Company will incur related to the closure of its facilities at the end of their useful life are recorded at the present value of expected future disbursements required to settle the obligation.

Construction-in-progress is transferred to property, plant and equipment in operation once the assets are available for their intended use and the related depreciation and amortization begins on that date.

Extension, modernization or improvement costs that represent an increase in productive, capacity or efficiency, or an extension of the useful lives of property, plant and equipment are capitalized as a an increase in the cost of the related assets. All maintenance, preservation and repair expenses are charged to expense as incurred.

Property, plant and equipment components are depreciated using the straight-line method over estimated useful lives. When components of property, plant and equipment have different useful lives, these components are recorded and depreciated separately. The useful lives are reviewed annually and revised as necessary. The useful lives used for the depreciation and amortization of assets included in property, plant and equipment are presented below.

F-36

Notes to the consolidated financial statements as of December 31, 2012

Note 3 – Significant accounting policies (continued)

| Types of property, plant and equipment | Life minimum | Life maximum |
|--|-----------------|-----------------|
| Buildings | 3 | 60 |
| Plant and equipment | 3 | 35 |
| Information technology equipment | 3 | 10 |
| Fixtures and fittings | 3 | 35 |
| Moto vehicles | 5 | 10 |
| Other property, plant and equipment | 2 | 30 |

Gains or losses generated from the sale or disposal of property, plant and equipment are recognized as income (or loss) in the period and calculated as the difference between the asset's net sales value and its carrying value.

The Company obtains property rights and mining concessions from the Chilean Ministry of Mining. Property rights are generally obtained through payment of mining licenses and minor registration expenses, along with annual license fees. Annual license fees are recorded as prepaid expenses and amortized over their twelve month effective period. Amounts attributable to mining concessions acquired from third parties, which are not from the Chilean State, are recorded at their acquisition cost.

3.8 Impairment of non-financial assets

Assets subject to depreciation and amortization are reviewed for impairment whenever events or changes circumstances indicate that the carrying value may not be recoverable. For purposes of assessing impairment, assets are grouped at the lowest level for which there are separately identifiable cash flows. An impairment loss is recognized for the excess of the carrying value of the asset over its recoverable amount. The recoverable amount of an asset is the higher between the fair value of an asset or CGU, less selling costs and its value in use. Assets other than goodwill, that suffered an impairment are reviewed for possible reversal of the impairment at each reporting date.

3.9 Financial liabilities

The Company classifies its financial liabilities under the following categories: at fair value through profit or loss, trade payables, interest-bearing loans, or derivatives designated as hedging instruments. Management determines the classification of its financial liabilities at the time of initial recognition.

Financial debt obligations are recorded at face value and as non-current when their maturity is greater than 12 months and as current when maturity is less than twelve months. Interest expenses is recognized in profit and loss when incurred.

Financial liabilities are derecognized when the obligation is repaid, settled or expires.

Notes to the consolidated financial statements as of December 31, 2012

Note 3 – Significant accounting policies (continued)

(a) Financial liabilities at fair value through profit or loss

Financial liabilities are classified at fair value when these are held for trading or designated in their initial recognition at fair value through profit or loss. This category includes derivative instruments not designated for hedge accounting.

(b) Trade payables

Trade payables are obligations to pay for goods or services that have been acquired in the ordinary course of business from to suppliers. Trade payables are initially recognized at fair value and are subsequently stated at their amortized cost using the effective interest rate method.

(c) Interest-bearing loans

Loans are initially recognized at fair value and are subsequently stated at amortized cost using the effective interest rate method. Amortized cost is calculated considering any premium or discount from the acquisition and includes transaction costs which are an integral part of the effective interest rate.

3.10 Current and deferred taxes

Corporate income tax for the year is determined as the aggregate of current taxes from all of the consolidated companies. Current taxes are calculated on the basis of the tax laws enacted or substantively enacted as of the Statement of Financial Position in the countries where the Company and its subsidiaries operate and generate taxable income.

Deferred tax is recognized using the liability method on temporary differences arising between the tax basis for assets and liabilities and their carrying amounts in the consolidated financial statements. Deferred income taxes are calculated using the tax rates expected to be applicable when the assets are realized or the liabilities are settled.

In conformity with current Chilean tax regulations, the provision for corporate income tax and taxes on mining activity is recognized on an accrual basis, presenting the net balances of accumulated monthly tax provisional payments for the fiscal period and associated credits. The balances of these accounts are presented in current income taxes recoverable or current taxes payable, as applicable.

Tax on companies and variations in deferred tax assets or liabilities that are not the result of business combinations are recorded in statement of income accounts or equity accounts in the Consolidated Statement of Financial Position, considering the origin of the gains or losses which have generated them.

F-38

Notes to the consolidated financial statements as of December 31, 2012

Note 3 – Significant accounting policies (continued)

The carrying value of deferred tax assets has been reviewed and reduced to the extent there will not be sufficient taxable income to allow the recovery of all or a portion of the deferred tax assets. Likewise, deferred tax assets that are not recognized were evaluated and not recognized if it was not more likely than not, that future taxable income will not allow for recovery of the deferred tax asset.

With respect to deductible temporary differences associated with investments in subsidiaries, associated companies and interest in joint ventures, deferred tax assets are recognized solely provided that it is more likely than not that the temporary differences will be reversed in the near future and that there will be taxable income with which they may be used.

Deferred tax assets and liabilities are offset if there is a legally enforceable right to offset tax assets against tax liabilities and the deferred tax is related to the same tax entity and authority, and there is intention to settle the balances on a net basis.

3.11 Obligations related to employee termination benefits and pension commitments

Obligations to the Company's employees are established in accordance with agreements in force and formalized through collective employment agreements and individual employment contracts. In the case of certain United States employees, benefit obligations are in accordance with a defined benefit pension plan, which was terminated in 2002. Liabilities for these obligations are recognized in the Statement of Financial Position using values established by actuarial calculations, which consider various assumptions including mortality rates, employee turnover, interest rates, retirement dates, future salary increases, and inflation.

Actuarial gains and losses generated by changes in previously defined obligations are directly recorded in profit or loss for the year. Actuarial gains and losses and gains resulting from differences between the estimate and actual behavior of the actuarial assumptions are recorded in equity in other comprehensive in the period in which they arise.

3.12

Share based payments

The Company has a cash settled shared based payment plan whereby executives and senior management receive cash payments based on changes in the Company's share price over a vesting period. The fair value of the vested portion of the awards is recorded as a liability and premeasured each reporting period using a Black Scholes model. Changes in the fair value of the awards are recorded directly to profit and loss for the period.

F-39

Notes to the consolidated financial statements as of December 31, 2012

Note 3 – Significant accounting policies (continued)

3.13

Other provisions

Provisions are recognized for environmental restoration, legal claims and other matters when the Company has a present legal or constructive obligation as the result of a past event; it is probable that resources must be used to settle the obligation; and a reliable estimate can be made of the amount of the obligation.

Provisions are measured at the present value of the expenditures expected to required to settle the obligation using pretax discount rate that reflects the liability's specific risks

The increase in the provision over time is recognized as a finance cost.

3.14

Revenue recognition

Revenue includes the fair value of considerations received or receivable for the sale of goods and services. Revenue is presented net of value added tax and rebates and discounts. Revenue is recognized when its amount can be reliably measured, it is probable that the future economic benefits will flow to the Company, and the specific conditions for each type of revenue related activity have been met, as follows:

(a)

Sale of goods

Sales of goods are recognized when the Company has delivered products to the customer, the customer has total discretion on the distribution channel and the price at which products are sold and there is no obligation pending compliance that could affect the acceptance of products by the customer. The delivery does not occur until products have been shipped to the customer or confirmed as received by customers when the related risks of obsolescence and loss have been transferred to the customer and the customer has accepted products in accordance with the conditions established in the sale, the acceptance period has ended, or there is objective evidence that those criteria required for acceptance have been met.

Sales are recognized in consideration of the price set in the sales agreement, net of volume discounts and other credits at the date of the sale. Volume discounts are evaluated in consideration of annual foreseen purchases and in accordance with the criteria defined in agreements.

(b)

Sales of services

Revenue associated with the rendering of services consist primary of rental income and related services provided, and is recognized considering the degree of completion of the service as of each reporting date provided that the results can be reliably estimated.

F-40

Notes to the consolidated financial statements as of December 31, 2012

Note 3 – Significant accounting policies (continued)

3.15 Exploration expenses

Exploration expenses are capitalized pending determination of the economic viability. Exploration expenses related to non economically minable reserves are charged to expense. Exploration expenses associated with the future development of economically mineable mineral reserves are capitalized as other non-financial assets until such time as mined. Expenses associated with mineral reserves in development are reclassified to Inventory and amortized according to the estimated mineral content.

3.16 Research and development costs

Research and development costs are expensed in the period incurred, with the exception of property, plant and equipment acquired for use in research and development activities.

3.17 Environmental expenditures

Amounts incurred for environmental protection and improvement as recorded as environmental expenses in profit and loss. The cost of facilities, machinery and equipment used for the same purpose are considered property, plant and equipment and capitalized as such.

3.18 Minimum dividend

According to the Chilean Corporations Act, a publicly traded corporation must pay dividends according to the policy decided at the General Shareholders' Meeting each year, with a minimum of 30% of the net income for the year if the corporation does not have unabsorbed accumulated deficit from prior years, unless it otherwise decided by unanimous vote of the shareholders.

3.19 Earnings per share

Basic earnings per share is calculated by dividing profit attributable to equity holders of the Company by the weighted average number of ordinary shares outstanding during the year. The Company has not conducted any type of operation, which would give rise to a potential dilutive effect on its earnings per share.

There have been no significant changes in accounting policies during 2012.

F-41

Notes to the consolidated financial statements as of December 31, 2012

Note 4 – Financial risk management

4.1 Risk Management Policy

The Financial Risk Management Policy of the Company is oriented towards safeguarding the stability and sustainability of Sociedad Química y Minera de Chile S.A. and subsidiaries in relation to all such relevant financial uncertainty components.

The operations of the Company are subject to certain financial risk factors that may affect the financial position or results of the same. Among these risks, the most relevant are market risk, liquidity risk, foreign exchange rate risk, bad debt risk, and interest rate risk.

There may be additional unknown risks or other known risks that might also affect the commercial operations, the business, the financial position or the results of the Company, but the Company believes at this time they are not significant.

The financial risk management structure includes identifying, determining, analyzing, quantifying, measuring and controlling these events. Management, in particular Finance Management, is responsible for constantly assessing the financial risk. The Company uses derivatives to hedge a significant portion of these risks.

4.2 Risk Factors

4.2.1 Market Risk

Market risks are those uncertainties associated with fluctuations of market variables that affect the assets and liabilities of the Company, such as:

- a) Country risk

The economic position of the countries where the Company has a presence may affect its financial position. For example, the sales carried out in emerging markets expose SQM to risks related to economic conditions and trends in those countries. On the other hand, inventories may also be affected by the economic situation of these countries and/or the global economy, amongst other probable economic impacts.

b)

Price volatility risk

The prices of the products of the Company are affected by the fluctuations of international prices of fertilizers and chemical products and changes in productive capacities or market demand, all of which might affect the Company's business, financial condition and operational results.

F-42

Notes to the consolidated financial statements as of December 31, 2012

Note 4 – Financial Risk Management (Continued)

c) Commodities price risk

The Company is exposed to changes in the prices of raw materials and energy which may have an impact on its production costs, thus giving rise to instability in the results.

At present, the Company has direct annual expenses of approximately US\$130 million related to oil related products, natural gas and equivalents, and approximately US\$60 million for electricity. Variations of 10% in the prices of energy the Company requires to operate would involve in the short term movement of costs amounting to US\$19 million.

4.2.2 Uncollectible Accounts Risks

A contraction of the global economy and the potentially negative effects in the financial position of the Company's clients may extend the accounts receivable collection time for SQM, increasing the Company bad debt exposure. While measures have been taken in order to minimize this risk, the global economy may trigger losses that might have a material adverse effect on the business, financial position or the results of the Company's operations.

To mitigate these risks, SQM actively controls debt collections and uses measures such as, credit insurance, letters of credit, and prepayments with regard to certain accounts receivable.

4.2.3 Foreign Exchange Risk

As a result of its influence in the determination of prices, its relationship with costs of sales, and since a significant part of our business is carried out in U.S. Dollars, the functional currency of SQM is the U.S. Dollar. However, the global business activities of the Company expose it to foreign exchange fluctuations of several currencies with respect to the U.S. Dollar. Therefore, SQM has hedge contracts to mitigate the exposure of its main balance mismatches (net assets) in currencies other than the U.S. Dollar against foreign exchange fluctuations. Those contracts are periodically updated depending upon the mismatch amount to be covered in these currencies.

A significant portion of the costs of the Company, particularly wages, is related to the Chilean Peso. Therefore, an increase or decrease in the exchange rate against the U.S. Dollar would affect the net income of SQM. At December 31, 2012, approximately US\$440 million of the costs of the Company are related to the Chilean Peso. A significant portion of the effect of such obligations in the balance is covered by operations of derivatives that hedge the mismatch of balance in this currency.

At December 31, 2011, the Company had outstanding derivative instruments designated as hedging currency and interest rate risks associated with all Chilean Peso- and UF-denominated bonds obligations, with a fair value of US\$ 56.1 million. As of December 31, 2012, the fair value was US\$100.6 million, in each case in favor of SQM.

F-43

Notes to the consolidated financial statements as of December 31, 2012

Note 4 – Financial Risk Management, Objectives and Policies (continued)

On December 31, 2012, the Chilean Peso to U.S. Dollar exchange rate was Ch\$ 479.96 for US\$ 1.00, at December 31, 2011 it was Ch\$ 519.20 for US\$ 1.00 and at December 31, 2010 it was Ch\$ 468.01 for US\$ 1.00.

4.2.4

Interest rate risk

Interest rate fluctuations, due to the uncertain future behavior of markets, may have a material impact on the financial results of the Company.

The Company has short and long term debts valued at LIBOR plus a spread. The Company is partially exposed to fluctuations of this rate, as SQM currently holds hedging derivative instruments to hedge a portion of its liabilities subject to LIBOR rate fluctuations.

As of December 31, 2012, approximately 21% of the Company's current financial obligations were subject to LIBOR rate fluctuation and therefore, significant increases in the rate may impact its financial position. A 100 basis points variation in this rate may trigger variations in financial expenses of approximately US\$3.1 million. Notwithstanding, this effect is significantly counter-balanced by the returns of the Company's investments that also relate to LIBOR.

In addition, as of December 31, 2012, the Company's total financial debt is primarily long-term, with 8% of maturities less than 12 months, which decreases the exposure to changes in the interest rates.

Notes to the consolidated financial statements as of December 31, 2012

Note 4 – Financial Risk Management, Objectives and Policies (continued)

4.2.5

Liquidity Risk

Liquidity risk relates to funding requirements to comply with payment obligations. The Company's objective is to keep financial flexibility by comfortably balancing funding requirements and cash flows from the regular business conduct, bank loans, public bonds, short term investments, and negotiable instruments, among others.

The Company has an important capital expense program which is subject to change over time.

On the other hand, world financial markets go through contraction and expansion periods that are not foreseeable in the long term and may affect SQM's access to financial resources. These factors may have a material adverse impact on the business, financial position, and operational results of the Company.

SQM constantly monitors that its obligations and investments match, taking care as part of its financial risk management strategy of the obligations and investments maturities from a conservative perspective. As of December 31, 2012, the Company had non-committed and available working capital bank credit lines for a total of US\$530 million.

The position in other cash and cash equivalents generated by the Company is invested in highly liquid mutual funds which have an AAA risk rating.

4.3

Risk Measurement

The Company has methods to measure the effectiveness and efficiency of corporate risk strategies, both prospectively and retrospectively.

Note 5 – Background of consolidated companies

5.1 Parent's separate assets and liabilities

The assets and liabilities of the legal entity Sociedad Química y Minera de Chile S.A. before the effects of consolidation consists of the following:

| | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|-------------|-------------|-------------|-------------|
| | ThUS\$ | ThUS\$ | ThUS\$ |
| Assets | 3,908,259 | 3,626,748 | 3,338,594 |
| Liabilities | (1,775,476) | (1,813,914) | (1,715,791) |
| Total | 2,132,783 | 1,812,834 | 1,622,803 |

5.2 Controlling entity

In accordance with the Company's By-Laws, no shareholder can control more than 32% of the Company's voting shares; therefore, there is no controlling shareholder.

Notes to the consolidated financial statements as of December 31, 2012

Note 5 – Background of consolidated companies (continued)

5.3 Joint arrangements of the controlling interest

Sociedad de Inversiones Pampa Calichera S.A., Potasios de Chile S.A. and Global Mining Investments (Chile) S.A. together form the Pampa Group, and are the owners of 30.50% of SQM 's issued, subscribed and fully-paid shares as of December 31, 2012. Additionally, Kowa Company Ltd., Inversiones La Esperanza (Chile) Limitada. Kochi S.A. and La Esperanza Delaware Corporation, together the Kowa Group, are the owners of 2.08% of SQM S.A.'s currently issued, subscribed and fully-paid shares as of December 31, 2012.

In December 2006, the Pampa and Kowa groups entered into a joint venture agreement in regards to the management of their ownership of the Company's shares. However, both the Pampa Group and the Kowa Group have informed SQM, the SVS, and the relevant stock markets in Chile and the United States that they are not currently, nor have they ever been, related parties between themselves. Therefore, neither the Pampa Group, nor the Kowa Group individually control more than 32% of the voting right shares of SQM S.A.

F-55

Notes to the consolidated financial statements as of December 31, 2012

Note 5 – Background of consolidated companies (continued)

5.5 Detail of transactions between consolidated companies

a) Transactions conducted in 2012

On November 30, 2012, SQM transferred its 99% ownership interest in Minera Nueva Victoria Limitada to SQM Potasio S.A., which resulted in SQM Potasio S.A. owning 100% of the outstanding shares in this entity. Subsequent to this transaction, the assets and liabilities of Minera Nueva Victoria Limitada were absorbed into SQM Potasio S.A. resulting in the legal dissolution of Minera Victoria Limitada.

b) Transactions conducted in 2011

On April 7, 2011, Agrorama S.A. was incorporated with an ownership interest of Soquimich Comercial S.A. of 99.999% and by Sociedad Productora de Insumos Agrícolas Ltda. of 0.001%. This new company will have share capital of ThCh\$100.000 (ThUS\$211), its lifespan will be indefinite and its line of business will be the trading and distribution of fertilizers, pesticides and agricultural products or supplies.

In August and September of 2011, SQM Industrial S.A. made capital contributions totalling ThUS\$22,017 in its subsidiary SQMC Mexico S.A. de CV. increasing its ownership interest to 99.8739% .

In September 2011, Soquimich European Holding B.V., acquired from its associate, Nutrisi Holding N.V. a 66.6% ownership interest in Fertilizantes Naturales S.A. for ThUS\$3,179.

In December, 2011, Comercial Agrorama Callegari Ltda. changed its name to “Comercial Agrorama Limitada” and Fertilizantes Naturales S.A. changed its name to “SQM Iberian S.A.”

In December 2011, Soquimich European Holding B.V. sold its 50% ownership interest in Nutrisi Holding N.V. for ThUS\$5,736.

c)

Transactions conducted in 2010

In February , 2010, SQM Beijing Commercial Co. Ltd. was formed, to which SQM Industrial S.A. contributed capital of ThUS\$100, obtaining an equity interest of 100%.

Note 7 - Inventory

Inventory consists of the following:

| Type of inventory | 12/31/2012 ThUS\$ | 12/31/2011 ThUS\$ | 12/31/2010 ThUS\$ |
|-------------------------|----------------------|----------------------|----------------------|
| Raw materials | 8,675 | 10,111 | 7,120 |
| Supplies for production | 37,919 | 31,602 | 21,398 |
| Products-in-progress | 411,039 | 356,038 | 291,536 |
| Finished products | 438,603 | 346,651 | 285,047 |
| Total | 896,236 | 744,402 | 605,101 |

Inventory reserves recognized as of December 31, 2012, 2011 and 2010 amounted to ThUS\$72,687, ThUS\$58,220, and ThUS\$63,597, respectively. Inventory reserves have been made based on a technical studies covering different variables affecting products in stock such as density, humidity, and others. Reserves are also recognized for lower of cost or market assessments, and for differences that arise from inventory counts.

Reserves by inventory class are as follows:

| Type of inventory | 12/31/2012 ThUS\$ | 12/31/2011 ThUS\$ | 12/31/2010 ThUS\$ |
|----------------------------------|----------------------|----------------------|----------------------|
| Raw material reserves | 93 | 593 | 593 |
| Supplies for production reserves | 500 | 500 | 500 |
| Products-in-progress reserves | 46,635 | 33,811 | 43,115 |
| Finished product reserves | 25,459 | 23,316 | 19,389 |
| Total | 72,687 | 58,220 | 63,597 |

The Company has not pledged inventory as collateral for the periods indicated above.

Notes to the consolidated financial statements as of December 31, 2012

Note 8 – Related party disclosures

8.1 Related party disclosures

Balances pending at period-end are not guaranteed, accrue no interest and are settled in cash. No guarantees have been delivered or received for trade and other receivables due from related parties or trade and other payables due to related parties. The Company has not recorded any impairment in accounts receivable related to amounts owed by related parties based on evaluations conducted each reporting period through an examination of the financial position of the related party in the market in which they operates.

8.2 Detailed identification of the link between the company and its related parties

F-66

Notes to the consolidated financial statements as of December 31, 2012

Note 8 – Related party disclosures (continued)

8.4 Board of directors and senior management

1) Board of directors

The Company is managed by a Board of Directors which is composed of eight regular directors who are elected for a three-year period. The present Board of Directors was elected by the shareholders at the Ordinary Shareholders' Meeting of April 28, 2011.

As of December 31, 2012, the Company has an Audit Committee made up of three members of the Board of Directors. This Committee performs those duties provided in Article 50 bis of Law No. 18,046 of the Chilean Corporation Act.

During the periods covered by these financial statements, there were no pending balances receivable and payable between the Company, its directors or members of Senior Management other than those related to remuneration, fee allowances and profit-sharing. In addition, there were no transactions conducted between the Company, its directors or members of Senior Management.

2) Directors' Compensation

For the years ended December 31, 2012, 2011 and 2010, Directors' compensation was as follows:

A payment of a monthly fixed gross amount of UF 300 to the Chairman of the Company's Board of Directors and a) UF 50 in favor of the seven remaining board members regardless of their attendance at Board meetings or the number of meetings attended during the related month.

A payment in domestic currency in favor of the Chairman of the Company's Board of Directors consisting of a b) variable and gross amount equivalent to 0.35% of profit for the period effectively earned by the Company during each fiscal year.

A payment in domestic currency in favor of each Company's directors excluding the Chairman of the Board,
c) consisting of a variable and gross amount equivalent to 0.04% of profit for the period effectively earned by the Company during each fiscal year.

The fixed and variable amounts indicated above will not be subject to any charge between them, and those
d) expressed as a percentage will be paid immediately after the shareholders at the respective Annual General Shareholders' Meeting of the Company approve the consolidated financial statements, the annual report, the report by the account inspectors and the report of external auditors for each fiscal year.

F-67

Notes to the consolidated financial statements as of December 31, 2012

Note 8 – Related party disclosures (continued)

8.4 Board of directors and senior management, continued

The remuneration of the Audit Committee is detailed as follows:

a) A payment of a monthly, fixed and gross amount of UF 17 in favor of each of the three Directors who are a part of the Company's Audit Committee regardless of the number of meetings conducted during the respective month.

b) A payment in domestic currency and in favor of each of the three Directors of a variable and gross amount equivalent to 0.013% of the Company's profit for the period effectively earned by the Company during fiscal years 2012 and 2011.

3) The remunerations and profit sharing paid to members of the Board of Directors and Audit Committee during 2012, 2011 and 2010 amount to ThUS\$3,973, ThUS\$3,030, and ThUS\$2,869, respectively.

4) As of December 31, 2012, 2011 and 2010, the global compensation paid to the 120 top executives amounted to ThUS\$32,888, ThUS\$22,509 and ThUS\$21,809, respectively. This includes monthly fixed salary and variable performance bonuses.

5) Additionally, the Company has retention bonuses for the Company's executives. The amount of these bonuses is linked to the price of the Company's shares and is payable in cash between 2012 and 2016 (See Note 15).

6) No guarantees have been constituted in favor of the Company's management.

7) The Company's Directors and senior management do not receive or have not received any benefit during the period ended December 31, 2012, 2011 and 2010 or compensation related to pensions, life insurance, paid time off, profit sharing, incentives, or benefits due to disability other than those mentioned in the preceding paragraphs.

8) One of the Company's Board of Directors is member of the Ultramar Group. Operations with between the Company and the Ultramar Group consisted of approximately ThUS\$22,577, ThUS\$13,751, and ThUS\$11,532 for the years ended December 31, 2012, 2011 and 2010, respectively.

9)No guarantees have been constituted in favor of the directors.

| Total | 18,793 | 18,673 | 18,882 |

a) Credit risk concentration

Credit risk concentrations with respect to trade receivables are reduced due to the large number of entities included in the Company's client database and their distribution throughout the world.

F-73

Notes to the consolidated financial statements as of December 31, 2012

Note 9 – Financial instruments (continued)**9.3****Hedging assets and liabilities**

The balance represents derivative instruments measured at fair value which have been classified as hedges from exchange and interest rate risks related to the total obligations relating to bonds of the Company in Chilean Pesos and UF (and the exchange risk in Chilean Pesos of the Company's investment plans). As of December 31, 2012. The face value of cash flows in Cross Currency Swap contracts agreed upon in U.S. Dollars amounted to ThUS\$515,156 as of December 31, 2011 such contracts amounted to ThUS\$ 405,486, and as of December 31, 2010 such contracts amounted to ThUS\$ 410,618.

| Hedging assets | Derivative instruments (CCS) ThUS\$ | Effect on profit or loss for the year, derivative instruments ThUS\$ | Hedging reserve in gross equity ThUS\$ | Deferred tax hedging reserve in equity ThUS\$ | Hedging reserve in equity ThUS\$ |
|-------------------|--|---|---|--|-------------------------------------|
| December 31, 2012 | 100,647 | 49,853 | (18,419) | 3,684 | (14,735) |
| December 31, 2011 | 56,108 | (39,718) | (12,184) | 2,104 | (10,080) |
| December 31, 2010 | 97,553 | 46,936 | (11,093) | 1,886 | (9,207) |

| Hedging liabilities | Derivative instruments (IRS) ThUS\$ | Effect on profit or loss for the year, derivative instruments ThUS\$ | Hedging reserve in gross equity ThUS\$ | Deferred tax hedging reserve in equity ThUS\$ | Hedging reserve in equity ThUS\$ |
|---------------------|--|---|---|--|-------------------------------------|
| December 31, 2012 | 1,879 | 27 | (1,786) | - | (1,786) |
| December 31, 2011 | 270 | (120) | (150) | - | (150) |
| December 31, 2010 | - | - | - | - | - |

Amounts recorded in the effect on profit or loss column consider the mark - market effects of the contracts in force as of December 31, 2012, 2011 and 2010.

F-74

Notes to the consolidated financial statements as of December 31, 2012

Note 9 – Financial instruments (continued)

9.3 Hedging assets and liabilities, continued

Derivative contract maturities are detailed as follows:

| Series | Contract amount ThUS\$ | Currency | Maturity date |
|--------|------------------------|--------------|---------------|
| C | 71,841 | UF | 12/01/2026 |
| G | 33,673 | Chilean peso | 01/05/2014 |
| H | 146,360 | UF | 01/05/2013 |
| I | 56,041 | UF | 04/01/2014 |
| J | 92,440 | Chilean peso | 04/01/2014 |
| M | 46,463 | UF | 02/01/2017 |
| O | 68,338 | UF | 02/01/2017 |

The Company uses cross currency swap derivative instruments to hedge the possible financial risk associated with the volatility of the exchange rate associated with Chilean Pesos and UF. The objective is to hedge the exchange rate financial risks associated with bonds payable. Hedges are documented and tested to measure their effectiveness.

Based on a comparison of critical terms, hedging is highly effective, given that the hedged amount is consistent with obligations maintained for bonds denominated in Chilean Pesos and UF. Likewise, hedging contracts are denominated in the same currencies and have the same expiration dates of bond principal and interest payments.

Hedge Accounting

The Company classifies derivative instruments as hedging that may include derivative or embedded derivatives either as fair value hedge derivative instruments, cash flow hedge derivative instruments, or hedge derivative instruments.

a) Fair value hedge

Changes in fair values of derivative instruments classified as fair value hedge derivative instruments are accounted for in gains and losses immediately along with any change in the fair value of the hedged item that is attributable to the risk being hedged.

The Company documents the relationship between hedge instruments and the hedged item along with the objectives of its risk management and strategy to carry out different hedging transactions. In addition, upon commencement of the period hedged and then on a quarterly basis the Company documents whether hedge instruments have been efficient and met the objective of hedging market fluctuations for the purpose of which we use the effectiveness test. A hedge instrument is deemed effective if the effectiveness test result is between 80% to 120%.

The hedge instruments are classified as effective or not effective on the basis of the effectiveness test results. This note includes the detail of fair values of derivatives classified as hedging instruments.

F-75

Notes to the consolidated financial statements as of December 31, 2012

Note 9 - Financial instruments (continued)

9.3 Hedging assets and liabilities, continued

b) Cash flow hedges

Cash flow hedges cover exposure to the cash flow variations attributable to a risk associated with a specific transaction that is very likely to be executed, that may have material effects on the results of the Company.

9.4 Financial liabilities

Other current and non-current financial liabilities

As of December 31, 2012, 2011 and 2010, the detail is as follows:

F-93

Notes to the consolidated financial statements as of December 31, 2012

Note 9 - Financial instruments (continued)

9.8 Financial assets pledged as guarantee

On November 4, 2004, the Company's subsidiary Isapre Norte Grande maintains a guarantee equivalent to the total amount owed to its members and healthcare providers, which is managed and maintained by Banco de Chile. Assets, in the form of restricted cash pledged as guarantees as of December 31, 2012, 2011, and 2010 were ThUS\$571, ThUS\$428, and ThUS\$514, respectively.

9.9 Estimated fair value of financial instruments and financial derivatives

Although inputs used to estimate the fair value of financial assets and liabilities represent Management's best estimate, they are subjective in nature and involve assumptions related to the current economic and market conditions, as well as underlying risk features. The methodologies and assumptions used to value each financial instrument depend on the risk profile and underlying characteristics of instrument as follows:

- Cash equivalent approximates fair value due to the short-term maturities of these instruments.
- Other current financial liabilities are considered at fair value equal to their carrying values.

Interest-bearing liabilities with original maturity of more than a year, fair values are calculated at discounting contractual cash flows at their original current market values with similar terms.

Forward and swap contracts, fair value is determined using quoted market prices of financial instruments with similar characteristics.

Notes to the consolidated financial statements as of December 31, 2012

Note 9 - Financial instruments (continued)**9.9 Estimated fair value of financial instruments and financial derivatives, continued**

Details of the carrying values and estimated fair values of the Company's financial instruments is as follows:

| | 12/31/2012 | | 12/31/2011 | | 12/31/2010 | |
|--|-----------------------------|-----------------------------|-----------------------------|-----------------------------|-----------------------------|-----------------------------|

| Total other current financial liabilities | 152,843 | 152,843 | 161,008 | 161,008 | 187,555 | 187,555 |
| Current and non-current accounts payable | 207,944 | 207,944 | 183,032 | 183,032 | 152,147 | 152,147 |
| Other non-current financial liabilities: | | | | | | |
| - Bank loans | 379,119 | 401,065 | 329,150 | 348,218 | 140,000 | 143,174 |
| - Unsecured obligations | 1,067,075 | 1,137,363 | 907,877 | 1,074,907 | 950,188 | 1,092,026 |
| Total other non-current financial liabilities: | 1,446,194 | 1,538,428 | 1,237,027 | 1,423,125 | 1,090,188 | 1,235,200 |

Fair value hierarchies are as follows:

- **Level 1:** Quoted prices (unadjusted) in active markets for identical assets and liabilities.
- **Level 2:** Inputs other than quoted prices that are observable for the asset or liability either directly (prices) or indirectly (derived from prices).
- **Level 3:** Inputs for the asset or liability that are not based on observable market data, or unobservable inputs.

The valuation techniques used to determine the fair value of our hedging instruments are those indicated in level 2.

Notes to the consolidated financial statements as of December 31, 2012

Note 11 - Intangible assets and goodwill (continued)

11.2 Disclosures on intangible assets and goodwill, continued

The estimated useful life for software is 3 years. For other finite useful life assets, the amortization period corresponds to their contractually defined period. Indefinite useful life intangible assets primarily consist of water rights and rights of way, which have do not expire.

The minimum and maximum useful lives of intangible assets are as follows:

| Estimated useful lives or amortization rate | Minimum life or rate | Maximum life or rate |
|---|----------------------|----------------------|
| Rights of way and water rights | Indefinite | Indefinite |
| Other intangible assets | Indefinite | Indefinite |
| Rights of way and water rights | 1 year | 16 years |
| Trademarks | 1 year | 5 years |
| Software | 2 years | 3 years |

The Company has no internally generated intangible assets.

Notes to the consolidated financial statements as of December 31, 2012

Note 12 - Property, plant and equipment (continued)

12.3 Detail of property, plant and equipment pledged as guarantee

There are no title restrictions or guarantees associated with property, plant and equipment.

12.4 Additional Information

1) Leased property, plant and equipment

At December 31, 2012 and 2011, the Company had no leased assets. As of December 31, 2010 the Company had leased assets of ThUS\$1,373 corresponding to two floors of the Las Americas building in Santiago, Chile. These leased assets were classified as investment properties.

2) Interest capitalized in construction in-progress

The cost of capitalized interest is determined by applying the average or weighted average of all financing costs incurred by the Company to the month end balances of construction in progress. The effective interest rate used to capitalize interest on construction in progress was 7% for the years ended December 31, 2012, 2011 and 2010.

For the years ended December 31, 2012, 2011 and 2010, capitalized interest amounted to ThUS\$14,156, ThUS\$22,249, ThUS\$25,947, respectively.

Note 13 – Employee benefits

F-111

Notes to the consolidated financial statements as of December 31, 2012

Note 13 Employee benefits (continued)

13.2 Policies on employee benefits

Short-term benefits for active employees are represented by salaries, social welfare benefits, paid time-off, sickness other leaves of absence, profit sharing and incentives, and non-monetary benefits such as healthcare, housing, and subsidized or free goods or services. These benefits will be paid in a term which does not exceed twelve months, The Company only provides compensation and benefits to active employees, with the exemption of SQM North America as described in Note 13.5 below,

Bonuses paid to the Company's employees are disbursement in the first quarter of the following year, which is calculated based on profit for each reporting period in consideration of the employee appraisal process.

Benefits related to vacations are provided in accordance with the Labor Code which indicates that employees with more than a year of service will be entitled to annual holidays for a period not lower than fifteen paid business days per year. The Company provides the benefit of two additional vacation days per year.

Staff severance indemnities represent payments due to employees upon their separation from the Company including for retirement, involuntary and voluntary termination, disability, or death. Actual payments made to employees at the time of separation are calculated based on years of service and a percentage of employees final year's salary as stipulated in established agreements between the Company and its employees and in accordance with local obligations. The Company recognizes a liability for severance indemnities using an actuarial model on an employee by employee basis considering the terms of individual employee contracts.

13.3 Other long-term benefits

Other long-term benefits relate to staff severance indemnities and defined benefit pension obligations and are recorded at their actuarial value and consist of the following.

12/31/2012 12/31/2011 12/31/2010

F-112

Notes to the consolidated financial statements as of December 31, 2012**Note 13 - Employee benefits (continued)****13.4 Chilean staff severance indemnities**

The change in severance indemnities calculated at the actuarial value are as follows:

| | 2012 | 2011 | 2010 |
|--------------------------|----------|----------|----------|
| | ThUS\$ | ThUS\$ | ThUS\$ |
| Opening balance | (28,188) | (27,208) | (28,682) |
| Current cost of service | (8,087) | (7,871) | (1,798) |
| Interest cost | (1,037) | (1,106) | (1,889) |
| Actuarial gain/loss | 40 | (151) | 88 |
| Exchange rate difference | (2,237) | 2,693 | (1,785) |
| Contributions paid | 5,078 | 5,455 | 6,858 |
| Balance | (34,431) | (28,188) | (27,208) |

The liability for staff severance indemnities in accordance with an actuarial model , use the following significant assumptions:

| | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|--|------------|------------|------------|
| Mortality rate | RV - 2011 | RV - 2010 | RV - 2009 |
| Actual annual interest rate | 6 | % 6 | % 6 |
| Annual voluntary turnover rotation rate: | | | |
| Men | 0,9 | % 0,9 | % 0,9 |
| Women | 1,53 | % 1,53 | % 1,53 |
| Average annual salary increase | 3,0 | % 3,0 | % 3,0 |
| Retirement age (years): | | | |
| Men | 65 | 65 | 65 |
| Women | 60 | 60 | 60 |

The methodology followed to determine the accrual for all employees considers RV-2010 turnover and mortality rates established by the Chilean Superintendence of Securities and Insurance to calculate pension-related life insurance reserves in Chile according to the Accumulated Benefit Valuation or Accrued Cost of Benefit Method, which is an established methodology in IAS 19 Retirement Benefit Costs.

The discount rate of 6% is based on the Company's long-term borrowing rates.

The Company retains the full obligation for the payment of staff severance indemnities upon separation without establishing a separate fund or restriction of assets for payment of such obligations, which is typically referred to as an unfunded plan.

F-113

Notes to the consolidated financial statements as of December 31, 2012**Note 13 - Employee benefits (continued)****13.5****Defined benefit pension obligations**

SQM North America had a defined pension plan the SQM North America Retirement Income Plan, which was terminated in 2002 and replaced with a 401K plan, that does not generate future obligations to the Company. The obligations under this terminated plan are calculated measuring the expected future forecasted staff severance indemnity obligation using a net salary gradual rate of restatements for inflation, mortality and turnover assumptions discounting the resulting amounts to their present values.

The table below establishes the status of amounts recognized in the Consolidated Statement of Financial Position:

| | 2012 ThUS\$ | 2011 ThUS\$ | 2010 ThUS\$ |
|--|----------------|----------------|----------------|
| Variation in projected benefit obligation (liability): | | | |
| Benefit liability at the beginning of year | 6,620 | 6,548 | 6,972 |
| Cost of service | 1 | 1 | 1 |
| Interest cost | 406 | 413 | 427 |
| Actuarial loss | (236) | (46) | (374) |
| Benefits paid | (309) | (297) | (297) |
| Benefit obligation (liability) at year-end | 6,482 | 6,619 | 6,549 |
| Change in the plan's assets: | | | |
| Fair value of the plan's assets at beginning of year | 5,206 | 5,847 | 5,082 |
| Contributions by the employer | 436 | 189 | 192 |
| Actual return (loss) on plan assets | 740 | (533) | 869 |
| Benefits paid | (309) | (297) | (296) |
| Fair value of the plan's assets at year-end | 6,073 | 5,206 | 5,847 |
| Accrued liability pension plan | (409) | (1,413) | (702) |
| Items not yet recognized as net regular pension-related cost elements: | | | |
| Net actuarial loss at the beginning of year | (2,954) | (2,111) | (3,131) |
| Amortization during the period | 131 | 84 | 155 |
| Net gain or loss during the period | 580 | (927) | 865 |
| Adjustment made to recognize the minimum pension-related liability | (2,243) | (2,954) | (2,111) |

F-114

Notes to the consolidated financial statements as of December 31, 2012**Note 13 - Employee benefits (continued)**

The change in the defined benefit obligation over the years is as follows:

| | 2012 ThUS\$ | 2011 ThUS\$ | 2010 ThUS\$ |
|--|----------------|----------------|----------------|
| Costs or benefits of services earned during the period | 2 | 1 | 1 |
| Cost of interest in benefit liability | 406 | 413 | 427 |
| Actual return in plan's assets | 739 | (532) | (869) |
| Amortization of loss from prior periods | 131 | 84 | 154 |
| Net gain for the period | (344) | 973 | 492 |
| Net regular pension-related expense | 142 | 57 | (205) |

13.6**Shared based compensation**

The Company maintains a share based compensation plan to encourage retention of its top 40 executives. Individuals receive annual cash payments based on changes in SQM's share price. Compensation for each individual is calculated as the differential between the average prices of the SQM's Series B shares as traded on the Santiago Stock Exchange during April of each year compared to a base price of US\$50 per share. Individuals are awarded a fixed number of shares over a five year vesting period through 2016.

Share based award activities are as following:

| Movement for the period | 2012 | 2011 | 2010 |
|--------------------------------------|-----------|-----------|-----------|
| Shares outstanding as of January 1 | 2,340,000 | 3,370,025 | 1,150,025 |
| Grants | 103,500 | - | 2,370,000 |
| Forfeitures | 103,500 | - | - |
| Exercised during the fiscal year | 139,500 | 1,030,025 | 150,000 |
| Shares outstanding as of December 31 | 2,200,500 | 2,340,000 | 3,370,025 |
| Average contractual life | 40 months | 48 months | 60 months |
| December 31 share price | US\$57.93 | US\$53.85 | US\$58.42 |

Compensation expense under the plan amount to ThUS\$3,142, ThUS\$11,200 and ThUS\$22,782 for the years ended December 31, 2012, 2011 and 2010, respectively.

F-115

Notes to the consolidated financial statements as of December 31, 2012

Note 14 - Disclosures on equity

14.1

Capital management

The Company's primary capital management object is to administer the financial debt and capital of SQM and its subsidiaries, ensure continuing operations and long term business continuity, ensure financing of new investments in order to maintain steady growth, have an adequate capital structure in accordance with economic cycles that have an impact on the business and the nature of the industry, and maximize the value of SQM and its subsidiaries over the medium the mid and long term.

Capital management adheres to the limits specified in the Financial Policy approved at the General Ordinary Shareholders Meeting, which established a maximum level of consolidated leverage of 1.5 times equity. This limit can only be exceeded to the extent that Management has previously been granted express authorization at the previous Shareholders Meeting.

Additionally, capital management must meet external capital requirements (or covenants) established in SQM's financial obligations, which regulates the debt limit to 1.4 times equity times.

Together with the overall debt level the Company seeks to maintain a reasonable maturity profile of its financial obligations, ensure financial ratios between short-term and long-term maturities, and the relationship they maintain with the distribution of the Company's assets. Consequently, the Company has maintained in recent periods current ratio levels in excess of 3.0.

Notes to the consolidated financial statements as of December 31, 2012

Note 14 – Equity Disclosures (continued)

Management reviews overall

Capital management objectives are measured in accordance with the following ratios:

| Capital Management | 31/12/2012 | 31/12/2011 | 31/12/2010 | Description (1) | Calculation (1) |
|------------------------------------|------------|------------|------------|---|---|
| Net Financial Debt ThUS\$ | 929,197 | 753,410 | 584,357 | Financial Debt - Financial Resources | Other Current Financial Liabilities + Other Financial Liabilities, Non-Current – Cash and cash equivalents – Other Current Financial Assets- Other non-current Hedging Assets |
| Current Ratio | 3.69 | 3.11 | 3.56 | Current Assets divided by Current Liabilities | Total Current assets / Total Current Liabilities |
| Net Financial Debt/ Capitalization | 0.30 | 0.29 | 0.26 | Net Financial Debt divided by Equity | Net Financial Debt / (Net Financial Debt + Equity) |
| ROE | 30.1 | % 29.7 | % 23.2 | % Net Income divided by Equity | Net Income/ Equity (Last 12 months) (Net Income – Administrative expenses) / (Total Assets – Cash and cash equivalents – Other Current Assets – Other Current Financial Assets- investments using the participation method) (Last 12 months) |
| ROA | 25.1 | % 24.1 | % 20.9 | % EBITDA – Depreciation divided by total assets of financial resources minus investments in related enterprises | EBITDA – Depreciation expenses) / (Total Assets – Cash and cash equivalents – Other Current Assets – Other Current Financial Assets- investments using the participation method) (Last 12 months) |
| Leverage | 1.02 | 1.08 | 1.02 | Total Liability divided by Equity | Total Liabilities / Total Equity |

(1) Assumes absolute value of various accounts

The Company's capital requirements vary depending on: working capital requirements, financing of new investments and dividends, among others. SQM manages its capital structure and makes adjustments based on prevailing economic conditions, in order to mitigate the risks associated with adverse market conditions and to take advantage of opportunities to improve overall liquidity.

There have been no changes in the capital management objectives or policies within the years covered by these consolidated financial statements.

F-117

Notes to the consolidated financial statements as of December 31, 2012

Note 14 – Equity Disclosures (continued)

14.2 Disclosures on preferred share capital

Issued share capital is divided into 263,196,524 fully paid and subscribed shares with no par value composed of 142,819,552 Series "A" shares and 120,376,972 Series "B" shares.

The voting rights for each series are detailed as follows:

Series "A":

If the election of the Company's President results in a tie vote, the Company's directors may vote once again, without the vote of the director elected by the Series B shareholders.

Series "B":

A general or extraordinary shareholders' meeting may be called at the request of shareholders representing 5% of the Company's Series B shares.

Extraordinary meeting of the Board of Directors may be called with or without the agreement of the Company's President, at the request of the director elected by Series B shareholders.

As of December 31, 2012, 2011 and 2010, the Company did not hold any shares in the parent either directly or through its companies in which it has investments.

Notes to the consolidated financial statements as of December 31, 2012

Note 14 – Disclosures on equity (continued)

14.3 Disclosures on preferred share capital (continued)

Capital in preference shares consist of the following:

Note 14 - Disclosures on equity (continued)

14.4 Disclosures on reserves in equity

Reserves for currency exchange conversion

This balance reflects retained earnings for changes due to the translation of subsidiaries financial statements into U.S. Dollars.

Reserve for cash flow hedges

This balance reflects changes in the fair value of derivative financial instruments classified as hedging changes in cash flows associated with UF-and Chilean Peso-denominated debt obligations.

Reserve for actuarial gains or losses in defined benefit plans

This balance reflects changes in the actuarial gains and losses in the calculation of defined benefit obligations, refer to Note 13.5.

Other reserves

Other reserves correspond to the acquisition of the remaining interest in SQM Iberian S.A., which was already controlled by the Company upon the acquisition date of the additional interest.

Changes in these reserves consist of the following:

| | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|--|------------|------------|------------|
| | ThUS\$ | ThUS\$ | ThUS\$ |
| Reserve for currency exchange conversion | (330) | (1,251) | 1,530 |

Notes to the consolidated financial statements as of December 31, 2012

Note 14 - Disclosures on equity (continued)

14.5

Dividend policies

As required by Article 79 of the Chilean Companies Act, the Company is required to distribute a cash dividend in an amount equal to at least 30% of its consolidated profit for the period for year unless and except to the extent it has a deficit in retained earnings (losses not absorbed in prior years), or as otherwise determined by a unanimous vote of shareholders.

The dividend policies defined by the Shareholders' General Meeting is:

- Distribution and payment in favor of each shareholder of a final dividend which will be equivalent to 50% of profit for the period.

- Distribution and payment, if possible during the year, of a provisional dividend which will be recorded against the aforementioned final dividend, This provisional dividend will normally be paid during the last quarter of the year and its amount can not exceed 50% of the retained earnings for distribution obtained during the year, which are reflected in the Company's financial statements as of September 30 of each year.

- The distribution and payment by the Company of the remaining balance of the final dividend related to profit for the year in up to two installments, which must be paid prior to June 30 of the following year.

- An amount equivalent to the remaining 50% of the Company's profit for the year will be retained and used to finance operations and one or more of the Company's investment projects with no prejudice of the possible future capitalization of this investment.

- The Board of Directors does not consider the payment of any additional or interim dividends.

- The application of the Company's dividend policy is dependent upon final profit for the year, and in future, to the Company's regular forecasts and the existence of conditions or events that could affect them. Any significant change in the Company's dividend policy or in events and conditions that may affect the Company's dividend policy will be timely communicated to all shareholders.

14.6

Provisional dividends

On November 20, 2012, the Company reported to the SVS, that the Company's Board of Directors agreed to pay and distribute a provisional dividend of approximately US\$0.94986 per share. The dividend was paid on December 12, 2012 from accumulated profits during the first nine months of 2012, in favor of all Shareholders registered in SQM Shareholders Register as of December 5, 2012. The dividend was paid in equivalent Chilean Pesos, based on U.S. Dollar exchange rate as published in the Official Gazette on December 5, 2012.

F-121

Notes to the consolidated financial statements as of December 31, 2012

Note 14 - Disclosures on equity (continued)

On April 26, 2012, in the Thirty-Seventh General Ordinary Shareholders' Meeting, the payment of a definite dividend of US\$1,03679 per share was approved because of the net profit obtained during the 2011's commercial exercise, To that dividend, should be discounted US\$0,73329 per share that has already been paid on account of provisory dividend and the remainder, then amounting to US\$0,30350 per share, will be paid and distributed in favor of SQM's shareholders who are registered in the corresponding Record, during the fifth working day before the date when this will be paid, Such last amount, in case that correspond, will be paid in its equivalent in CLP (Chilean Peso) according to the value of "Dólar Observado" or "U.S. Dollar" published in the Official Gazette of April 26, 2012.

On November 22, 2011, it was reported to the Superintendence of Securities and Insurance that the Board of Directors of Sociedad Química y Minera de Chile S.A., in its meeting on November 22, 2011, unanimously agreed to pay and distribute the provisional dividend referred to in SQM's current "2011 Dividends Policy" which was informed to SQM's General Annual Ordinary Shareholders Meeting that was held on April 28 of this year, This, for the essential purpose of being able to pay and distribute as of December 19, 2011, a provisional dividend of US\$0,73329 per share –and which is approximately equivalent to the total amount of US\$193 million and the latter corresponds to 50% of the distributable net income of the fiscal year 2011 that has been accrued at September 30, 2011, The above, is charged against the net income of said fiscal year, in favor of the Shareholders who appeared registered in SQM's Shareholders Registry by the 5 working day prior to December 19, 2011, and in its equivalent in Chilean pesos according to the value of the "Observed dollar" or "USA dollar" that appears published in the Official Gazette on December 13, 2011.

At the Annual Board of Directors meeting held on April 28, 2011, the Directors unanimously agreed to pay a final dividend of US\$0,7259 per share in relation to net profit for the year, Notwithstanding the above, US\$0,41794 per share was already paid as an interim dividend, and this amount should be subtracted from the final dividend detailed above, In line with this, the balance, amounting to US\$0,30798 per share, will be paid and distributed among shareholders of the Company who are registered with their respective shareholders registry as of the fifth business day prior to the day in which this dividend will be paid.

Dividends presented deducted from equity are:

| | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|---|------------|------------|------------|
| | ThUS\$ | ThUS\$ | ThUS\$ |

Notes to the consolidated financial statements as of December 31, 2012

Note 15 - Provisions and other non-financial liabilities (continued)

15.5 Detail of main classes of provisions

Legal expenses: Provision for legal claims brought against the Company's subsidiaries in Brazil and the United States.

Tax accrual in tax litigation: This accrual relates to lawsuits pending resolution of taxes claims in Brazil for SQM Brazil and NNC.

CORFO royalties agreement: Relates to the commercialization of mining properties payable from SQM Salar S.A. to CORFO on a quarterly basis. The royalty is calculated based on sales of products extracted from the Salar de Atacama.

Provisions are updated each reporting period based on changes in the facts and circumstances of each obligation.

There are no significant uncertainties with respect to the timing or amount of an specific provision.

10. Plaintiff : María Angélica Alday Fuentes
 Defendant : Vladimir Roco Alvarez, Compass Catering S.A. y SQM S.A.
 Date : August 2012
 Court : 1st Civil Court Antofagasta
 Reason : Damages related to attempted sexual abuse
 Status : Answer to the complaint
 Claim amount : ThUS\$200

The Company has only registered a provision for estimated losses in those lawsuits described above in which the probability of loss is considered to be more likely than not.

The Company and its subsidiaries have been involved and will likely continue to be involved either as plaintiffs or defendants in certain judicial proceedings that have been and will be heard by the Arbitral or Ordinary Courts of Justice who will make the final decision. Those proceedings governed by the appropriate legal regulations are intended to exercise or oppose certain actions or exceptions related to specific mining claims either granted or to be

granted and that do not or will not have an adverse affect on the development of the Company and its subsidiaries.

F-131

Notes to the consolidated financial statements as of December 31, 2012

Note 16 - Contingencies and restrictions (continued)

16.1 Lawsuits and other relevant events, continued

Soquimich Comercial S.A. has been involved and will probably continue being involved either as plaintiff or defendant in certain judicial proceedings through which it intends to collect and receive the amounts owed, the total claim value of which is approximately ThUS\$700.

The Company has made efforts and continues making efforts to obtain payment of certain amounts that are still owed it on occasion of its ongoing activities. Such amounts will continue required using judicial or non-judicial means by the plaintiffs, until the actions and exercise related to these actions are currently in full force and effect.

The Company and its subsidiaries have not received legal notice of any claims other than those mentioned above. The claims detailed above seek to annul certain mining claims that were purchased by SQM and its subsidiaries, the proportional purchase value of which, with respect to the portion affected by the superimposition, exceeds the nominal and approximate amount of ThUS\$150. The claims seek payment of certain amounts allegedly owed by the Company due to its own activities, which exceed the approximate, nominal and individual amount of ThUS\$ 150.

16.2 Restrictions to the management or financial limits

Credit Agreements executed by the Company and its subsidiaries with national and foreign banks and international bonds outstanding, require the Company comply with the following consolidated financial ratios:

- Maintain a minimum Net Worth of ThUS\$ 900,000.
- Maintain a Net Financial Debt to EBITDA ratio no greater than 3.00:1.00.
- Maintain a Leverage ratio no greater than 1.40:1.00.

Maintain an Operating Subsidiaries' Interest Indebtedness ratio, defined as the sum of SQM Salar S.A. and SQM Industrial S.A. financial debt over Total Current Assets, no greater than 0.30:1.00.

The calculated ratios mentioned above as are as follows:

| Indicator | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|--|------------|------------|------------|
| Net Worth ThUS\$ | 2,187,446 | 1,864,380 | 1,670,820 |
| Net Financial Debt/EBITDA | 0.83 | 0.79 | 0.85 |
| Leverage | 1.02 | 1.08 | 1.02 |
| Debt SQM Industrial and SQM Salar/Current Assets | 0.04 | 0.05 | - |

F-132

Notes to the consolidated financial statements as of December 31, 2012

Note 16 - Contingencies and restrictions (continued)

Covenants included in notes issued outside of Chile require that the Company will not consolidate with or merge into any other entity or convey or substantially transfer its properties and assets to another entity, unless (i) the successor entity will be an entity existing under the laws of the United States (or any State thereof or the District of Columbia) or Chile and will assume, by a supplemental indenture, the due and punctual payment of the principal, premium, if any related, and interest in respect of all the outstanding notes and the performance of every covenant in the indenture on the part of the Company to be performed or observed, (ii) immediately after giving effect to such transaction, no event of default, and no event which, after notice or lapse of time, or both, would become an event of default, will have happened and be continuing; and (iii) the Company will have delivered to the Trustee an officer's certificate and opinion of counsel stating that such consolidation, merger, conveyance or transfer and such supplemental indenture comply with the foregoing provisions relating to such transaction. In case of any such consolidation, merger conveyance or transfer (other than a lease), such successor entity will succeed to and be substituted for the Company as obligor on the notes, with the same effect as if it had been named in the Indenture as such obligor.

In addition, SQM is required to provide quarterly financial information.

The Company and its subsidiaries are in full compliance with all limitations, restrictions and obligations mentioned above.

16.3

Commitments

SQM Salar S.A. entered into a royalty agreement with the CORFO which requires annual payments to CORFO for the commercialization of certain mining properties owned by CORFO and the related products produced from these mining properties. Annual royalties are calculated based on the sales of each type of product. The contract expires in 2030. Royalties amounted to ThUS\$27,193, ThUS\$23,951 and ThUS\$18,717 for the years ended December 31, 2012, 2011 and 2010.

16.4

Restricted or pledged cash

Isapre Norte Grande Ltda. in compliance with requirements established by the Chilean Superintendence of Healthcare, which regulates the running of pension-related health institutions, maintains a guarantee of financial instruments,

delivered in the form of deposits, in the custody and administration of Banco de Chile. This guarantee, according to the regulations issued by the Chilean Superintendence of Healthcare is the equivalent of the total amounts owed to its members and medical providers. Banco de Chile reports the present value of the guarantee to the Chilean Superintendence of Healthcare and Isapre Norte Grande Ltda. on a daily basis. As of December 31, 2012, 2011 and 2010, the guarantee amounted to ThUS\$571, ThUS\$428 and ThUS\$514, respectively.

F-133

Notes to the consolidated financial statements as of December 31, 2012

Note 16 - Contingencies and restrictions (continued)

16.5 Securities obtained from third parties

Security received from third parties (distributors) to guarantee Soquimich Comercial S.A.'s compliance with contractual obligations derived from the distribution and sale of fertilizers amounted to ThUS\$4,126, ThUS\$4,467 and ThUS\$6,389 as of December 31, 2012, 2011 and 2010, respectively. The following entities have provided securities:

| Entity name | 12/31/2012 ThUS\$ | 12/31/2011 ThUS\$ | 12/31/2011 ThUS\$ |
|--------------------------------|----------------------|----------------------|----------------------|

F-135

Notes to the consolidated financial statements as of December 31, 2012

Note 17 - Earnings per Share

Basic earnings per share are calculated by dividing net income attributable to the Company's shareholders by the weighted average of the number of shares outstanding during that period,

As expressed, earnings per share are detailed as follows:

| | 12/31/2012 ThUS\$ | 12/31/2011 ThUS\$ | 12/31/2010 ThUS\$ |
|---|----------------------|----------------------|----------------------|
| Basic earnings per share | | | |
| Earnings attributable to owners of the parent | 649,167 | 545,758 | 382,122 |
| Number of common shares in circulation | 263,196,524 | 263,196,524 | 263,196,524 |
| Basic earnings per share (US\$ per share) | 2,47 | 2,07 | 1,45 |

The Company has not entered into any operation or issued any securities or financial instruments with a potential dilutive effect. Therefore diluted earnings per share is the same as basic earnings per share.

F-136

Notes to the consolidated financial statements as of December 31, 2012

c) Functional and presentation currency

The functional currency in these companies corresponds to the currency of the country of origin of each entity, and its presentation currency is the U.S. Dollar.

F-137

Notes to the consolidated financial statements as of December 31, 2012

Note 18 - Effect of fluctuations on the foreign currency exchange rates (continued)

d) Reasons to use one presentation currency and a different functional currency

- The total revenues of these subsidiaries are associated with the local currency.
 - The commercialization cost structure of these companies is affected by the local currency.
 - The equities of these companies are expressed in local currency (Chilean peso).

Note 19 - Environment

19.1 Disclosures of disbursements related to the environment

The Company is concerned with protecting the environment both in its production processes and with respect to products manufactured. This commitment is supported by the principles indicated in the Company's Sustainable Development Policy. The Company is currently operating under an Environmental Management System (EMS) that has allowed it to strengthen its environmental performance through the effective application of the Company's Sustainable Development Policy.

Operations that use caliche as a raw material are carried out in desert areas with climatic conditions that are favorable for drying solids and evaporating liquids using solar energy. Operations involving the open-pit extraction of minerals, due to their low waste-to-mineral ratio, generate remaining deposits that slightly alter the environment. A portion of the ore extracted is crushed, a process in which in the emission of particulates. Currently this operation is only conducted at the Company's Pedro de Valdivia operations.

Many of the Company's products are shipped in bulk at the Port of Tocopilla, Chile. In 2007, the city of Tocopilla was declared a zone saturated with MP10 particles mainly due to the emissions from electric power plants that operate in that city. In October 2010 the Decontamination Plan for Tocopilla was put in place. Accordingly, the Company has committed to taking several measures to mitigate the effects derived from bulk product movements in the port. These measures have been successfully implemented since 2007.

The Company carries out environmental monitoring plans based on specialized scientific studies. Within this context, the Company entered into a contract with the National Forestry Corporation (CONAF) aimed at researching the activities of flamingo groups that live in the Salar de Atacama lagoons. Such research includes a population count of

the birds, as well as breeding research. Environmental monitoring activities carried out by the Company at the Salar de Atacama and other systems in which it operates are supported by a number of studies that have integrated diverse scientific efforts from prestigious research centers, including Dictuc from the Pontificia Universidad Católica in Santiago and the School of Agricultural Science of the Universidad de Chile.

F-138

Notes to the consolidated financial statements as of December 31, 2012

Note 19 - Environment (continued)

19.1 Disclosures of disbursements related to the environment (continued)

Furthermore, within the framework of the environmental studies that the Company is conducting, the Company performs significant activities in relation to the recording of Pre-Columbian and historical cultural heritage, as well as the protection of heritage sites, in accordance with current Chilean laws. These activities have been specifically performed in the areas surrounding our Maria Elena and Nueva Victoria plants. This effort is being accompanied by cultural initiatives within the community and the organization of exhibits in local and regional museums.

As emphasized in its Sustainable Development Policy, the Company strives to maintain positive relationships with the communities surrounding the locations in which it carries out its operations, as well as to participate in communities' development by supporting joint projects and activities which help to improve the quality of life for residents. For this purpose, the Company has focused its efforts on activities involving the rescue of historical heritage, education and culture, as well as development, and in order to do so, it acts both individually and in conjunction with private and public entities.

19.2 Detail of information on disbursements related to the environment

Cummulative disbursements as of December 31, 2012 in related to investments in production processes, verification and control of compliance with environmental ordinances and laws relative to industrial processes and facilities, amounted to ThUS\$23,207 and are detailed as follows:

F-161

Notes to the consolidated financial statements as of December 31, 2012

Note 19 - Environment (continued)

19.3 Description of each project, indicating whether they are in process or have been completed

SQM Industrial S.A.

IQ8G: Improvement of restrooms, expanding their capacity, and improving water storage. The project is in process.

JQEZ: Purchasing and installing Bertrams Boilers in Coya Sur Prill in order to improve the level of combustion, and decreasing and controlling the emission of fumes into the environment. The project is in process.

JQH9: Purchasing Bertram's boilers in order to improve the combustion levels, decreasing and controlling the emission of fumes to the environment. The project is in process.

MNYS: Preparation and execution of geoglyphs conservation; editing and publishing a related book, implementing a learning center, and construction of a collection deposit. These are compensation measures of the Technological Change Maria Elena project. The project is in process.

MP5W: Normalization of fuel storage and distribution system in SQM installations. The project is in process.

MPQU: Construction of warehouses for dangerous chemicals in order to comply with current regulations and decrease the chance of high risk accidents.

MQ8M: Performing maintenance to structures and closing monitoring stations in Maria Elena. The project is in process.

MQA8: Standarization of the gas network in peripheral casinos;stage 1: projects include: CS, Lagarto, Yodo, PV, Toco and Rancho 6. The project is in process.

MQAJ: Improving the water and sewer network in Maria Elena to improve operations. The project is in process.

MQBM: Implementing archeological measures in Maria Elena – Toco site, such as the archeological registry, analysis of lithic materials, and generating reports, among others. The project is in process.

MQHF: To equip a sewage plant in Toco according to DS 594, including a changing room for operators and contractors, among other improvements. The project is in process.

MQK2: Decontaminating equipment and other items contaminated with PCBs in accordance with applicable regulations. The project is in process.

PPC1: Purchasing and replaceming equipment contaminated with PCB and obsolete equipment without spare parts. The project is in process.

F-162

Notes to the consolidated financial statements as of December 31, 2012

Note 19 - Environment (continued)

PPNK: Control of the ammonia gas in the crystal plant stoppage. The project is in process.

PPZU: Normalize and certify fuel tanks in the María Elena, Coya Sur and Pedro de Valdivia plants. The project is in process.

SQ7X: Obtaining and recording information of components and finished products of SQM in the ECHA database to comply with the requirements of REACH regulation of the European Union. The project is in process.

TQA2: Improving the Villa Prat sewage system. The project is in process.

CQLX: Construction in each place a field of approximately 145 m². The project is in process.

JQL7: Improve product recovery and to control emissions. The Project is in process.

JQ8K: Building a new drying plant in Coya Sur. The project is in process.

FP55 – FPXA: These 2 projects have a final objective consisting in the installation of a sea water sucking system of 87 km from the Mejillones area to the SQM facilities located in Pampa Blanca. The projected expenses correspond only to the filing of the EIA of the PB mine zone and the EIA of the PB expansion. Both projects are in process.

JQB6: Preparation and filing of the EID of project NPT4 of Coya Sur, which increases the salt production capacity. The project is in process.

PQLV: Elaboration of the DIA Pedro de Valdivia Mine. The project is in process.

SQM S.A.

AQ0A: To enable the use of water rights granted in several wells in the Conaf Pampa del Tamarugal reservation and to move them outside of the Tamarugo Forest and the reservation to reduce the environmental impact of its development. The project is in process.

IPFT: Implementing measures committed in various projects related to the Nueva Victoria mine, and updating Nueva Victoria's operations, including evaporation ponds in the Iris. The project is in process.

IPXE: To implement the environment follow-up plan of Project Pampa Hermosa in Salar de Llamara. The project is in process.

IPXF: To implement the environment follow-up of plan of Project Pampa Hermosa in Pampa del Tamarugal. The project is in process.

IQ08: Various projects associated with water reservoirs in Pampa del Tamarugal and Salar de Llamara, including constructing and enabling observation and monitoring wells, pumping tests, and construction of roads over the hard sand terrain of the Salar crust. The project is in process.

F-163

Notes to the consolidated financial statements as of December 31, 2012

Note 19 - Environment (continued)

IQ0C: Improving the area adjacent to Route 5, enabling the development of a self-guided tour of the Cantón de Lagunas area to understand the Salar's history. The project has been completed.

IQ1K: Construction of the observation wells in Sur Viejo to comply with the environmental commitments proposed in the EIS of Pampa Hermosa and to be able to monitor the water reservoir adjacent to these wells. The project has been completed.

IQ1M: To implement various environmental commitments included in the EIS project "Pampa Hermosa" to safeguard the puquíos zone that is in the Salar de Llamara water reservoir. The project is in process.

IQ3S: Improving the storage installations of dangerous raw materials in Nueva Victoria. The project is in process.

IQ52: Enabling and expansion of environment offices in Nueva Victoria. The project is in process.

IQ53: To perform a survey for the new location of the Soronal abduction trace in Project Pampa Hermosa (RCA N° 890/2010). The project is in process.

IQ54: Implementing various environmental commitments acquired through the environment assessment of the project Pampa Hermosa (RCA N°890/2010). The project is in process.

IQ9V: To support the development of agriculture and tourism industries in the location of Quillagua, through productive measures, technical assistance and marketing. The project is in process.

PQB9: Installing two larger SO₂ extractors at the end of the process. The project is in process.

IQLR: Updaing the design, implementation and operation of mitigation measures in the puquíos at Salar Llamara. The project is in progress.

MLQ: Design and implement a fumes scrubbing system to mitigate SO₂ emissions, aligned with our Sustainable Development Policy. The project is in progress.

IQ6M – IQ6N: Preparation and filing of the EID of the Project "Nueva Victoria Mine Expansion." The projected expenses only include filing the EID. The project is in process.

IP83: Preparation and filing of the EID of the Project "Extension TLN-15", The projected expenses only include the environment document filing, The project is in process.

IQOW: Enable a heritage interest deposit in Humberstone Historic Saltpeter Office to store materials of cultural interest recovered in the site from project under execution ZMNV.

IQPJ: The project consists of the implementation of the cultural measures compromised in the Environmental Evaluation for the mining areas. The measures will be implemented depending on the requirements of the Mining Operation of the VPONV, project in execution.

F-164

Notes to the consolidated financial statements as of December 31, 2012

Note 19 - Environment (continued)

SQM Salar S.A.

LQFD: Construction of exchange offices for the comfort for our employees. The project is in process.

LQG8: Increase the capacity of the garbage facilities at the Toconao Camp to avoid problems associated with gathering and handling garbage. The project is in process.

LQ38: Compliance with the current regulations and observations raised by SEREMI. The project is in process.

LQAK: Construction of garbage facilities in the MOP and SOP lunchrooms to increase waste capacity. The project is in process.

CQ4M: Regulating electrical facilities including changing of cables, and electric and illumination control panels, as well as installing restrooms with showers for permanent contractor personnel. The project is in process.

CQ8U: Improving the condition and capacity of the exchange rooms in Salar del Carmen. The project is in process.

LP82: Support development of demonstration fields and provide technical assistance agriculture improvements such as watering practices. The project is in process.

LPTF: Perform required semi-annual reports to present improvements and optimizations at environmental control points, and the knowledge of improvements in geologic and hydrogeologic variables near Salar de Atacama. The project is in process.

LPTJ: Acquisition of equipment to ensure the operating continuity of the TAS and OR plants, the change in the current control system of TK's drinking water, wastewater, and wastewater elevation chambers. The project has been completed.

LQDM: Certification of the liquid fuel storage tanks. The project is in process.

LQI6: Elaboration and update of our EIA associated with operations in the Atacama Salt Deposit. The project is in process.

LQNI: Elaboration and document application for the DIA of the project "Drying and compacting KCl facility expansion", The considered expenses, only includes the environmental mitigation costs. The project is under execution.

SIT S.A.

TQNA: Installation of a meteorology station in order to measure the speed and direction of wind in the south sector of Tocopilla to comply with commitments made to local authorities. The project is in process.

MQ6Y: To maintain and repair the Bureau of Exchange in María Elena and Tocopilla to comply with Decree No. 594. The project is in its completion stage.

F-165

Notes to the consolidated financial statements as of December 31, 2012

Note 19 - Environment (continued)

TPR8: Reduce the generation of industrial waste through the use of vacuum and no-washing technologies through implementing a vacuum system that avoids the use of water and therefore the generation of liquid industrial waste. The project is in process.

TPYX: To comply with commitments to decrease emissions of particulate material towards the city of Tocopilla. The project is in process.

TQAP: To decrease the environmental pollution and product losses associated with product storage. The project is in process.

TQAV: Paving and maintenance of internal roads at the port of Tocopilla to decrease pollution and to comply with the Supreme Decree related to the local saturated zone. The project is in process.

TQM2: Recovering operating conditions through modification to the duct yard N°1, thus being able to diminish the environmental pollution. The project is in process.

TQLY: Eliminate the possible ambient contamination that may exist in working areas. The project is in process.

TQQ5: This project will reduce emissions of particulate matter, and minimize the environmental impact in neighboring communities. This project is under commission.

SQM POTASIO S.A.

IQ4C: Supply, construction and assembly of osmosis and septic wells and related plant at the Iris camp. The project is in its completion stage.

SQM Nitratos S.A.

PQ19: Construt new wells to replace the current ones with a modern waste water treatment technology. The project is in process.

IQMH: Creating storage area for dangerous substances. The project is in process.

IQDN: Building a parapet to form a squared or rectangular pool with an impermeable membrane covering in order to be used as mud deposit. The project is in process.

F-166

Notes to the consolidated financial statements as of December 31, 2012

Note 20 - Other current and non-current non-financial assets

The detail of other current and non-current assets consists of the following:

| | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|-------------------------------------|------------|------------|------------|
| Other non-financial assets, current | ThUS\$ | ThUS\$ | ThUS\$ |
| Domestic Value Added Tax | 42,136 | 46,243 | 30,795 |
| Foreign Value Added Tax | 9,306 | 5,879 | 4,167 |
| Prepaid mining licenses | 1,512 | 1,228 | 1,281 |
| Prepaid insurance | 8,278 | 6,979 | 4,575 |
| Other prepayments | 494 | 236 | 86 |
| Other assets | 6,094 | 3,227 | 3,538 |
| Total | 67,820 | 63,792 | 44,442 |

| | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|---|------------|------------|------------|
| Other non-financial assets, non-current | ThUS\$ | ThUS\$ | ThUS\$ |
| Exploration and evaluation expenses (1) | 16,839 | 21,395 | 21,350 |
| Guarantee deposits | 571 | 428 | 514 |
| Other assets | 272 | 2,829 | 2,293 |
| Total | 17,682 | 24,652 | 24,157 |

Assets for the exploration or evaluation of mineral resources are amortized to the extent that the explored or evaluated area has been exploited. Amortization is based on a variable rate applied to extracted tons determined through measured mineral reserves and exploration costs. Capitalized expenses under current development are reclassified to inventory and are amortized according to the estimated ore reserves. Expenses associated with future economically producible reserves are presented under Other non-current assets. Those expenses incurred on properties with an ore grade that is not economical are directly charged to profit and loss. Amounts associated with the exploration and assessment of mineral resources presented under inventory are ThUS\$6,174, ThUS\$3,699 and ThUS\$1,723 as of December 31, 2012, 2011, and 2010, respectively.

Notes to the consolidated financial statements as of December 31, 2012

Note 20 - Other current and non-current non-financial assets (continued)

Reconciliation of changes in assets for exploration and mineral resource evaluation, by type

The change in exploration and evaluation assets consists of the following:

| Reconciliation | 12/31/2012 ThUS\$ | 12/31/2011 ThUS\$ | 12/31/2010 ThUS\$ |
|--|----------------------|----------------------|----------------------|
| Balance as of January 1 | 21,395 | 21,350 | 26,832 |
| Additions | 843 | 3,777 | - |
| Depreciation and amortization | (2,080) | (1,883) | (2,044) |
| Transfers and other charges | (3,319) | (1,849) | (3,438) |
| Assets for exploration and assement of mineral resources, net, final balance | 16,839 | 21,395 | 21,350 |

Note 21 - Operating segments

21.1 Operating segments

General information

Amounts disclosed in each operating segment is the same as that reported to the CODM for purposes of allocating resources and assessing performance. Each segment represents a strategic business units that offers disticnt products and services. Each segment is managed separately as each business requires different thecnologies and marketing strategies.

Information related to assets and liabilities, and income and expenses that cannot be assigned to a specific segment is included under the "Corporate Unit." The CODM asseses performance of the operating segments based on gross profit and net income without any specific adjustments.

Sales between segments are carried out at arm's length under similar terms and conditions as those made to third parties. Revenues from third parties is reported to the CODM in a manner consistent with that in the Statement of Income.

Assets and liabilities are not disclosed by segments as this information is not easily available, certain assets can not be separable as to their specific activity, and because this information is not used by the CODM. All assets and liabilities are disclosed in the category "amounts not assigned."

F-175

Notes to the consolidated financial statements as of December 31, 2012

Note 21 - Operating segments (continued)

21.5 Information about geographic areas

The Company disclose geographic information of its income from regular activities from external clients and for assets excluding financial instruments, assets associated with income taxes, assets associated with employee benefits and rights derived from insurance contracts.

21.6 Information on main customers

The Company has no external customers who individually represent 10% or more of consolidated revenues or accounts receivable. Concentration of credit risk associated with trade and other accounts receivable is limited due to the significant number of customers in the Company's portfolio and its worldwide distribution.

Notes to the consolidated financial statements as of December 31, 2012

Note 21 - Operating segments (continued)

21.8 Property, plant and equipment classified by geographical areas

The Company's primary production facilities are located near their mines and extraction facilities in the North of Chile. The following table describes our primary production facilities:

| Location | Products: |
|-------------------|---|
| Pedro de Valdivia | Production of nitrite, sulfate, and iodine |
| María Elena | Production of nitrite, sulfate, and iodine |
| Coya Sur | Production of nitrite, sulfate, and iodine |
| Nueva Victoria | Production of iodine and nitrate salts |
| Salar de Atacama | Potassium chloride, Lithium chloride and boric acid |
| Salar del Carmen | Production of Lithium carbonate lithium hydroxide, and of boron |
| Tocopilla | Port facilities |

Notes to the consolidated financial statements as of December 31, 2012

Note 23 - Income Tax and Deferred Taxes**23.1****Current tax assets:**

| | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|---|------------|------------|------------|
| | ThUS\$ | ThUS\$ | ThUS\$ |
| Monthly provisional income tax payments, Chilean companies current year | 23,713 | 1,758 | 19,614 |
| Monthly provisional income tax payments, Chilean companies prior year | 2,430 | - | 2,158 |
| Monthly provisional income tax payments, foreign companies | 1,979 | 857 | 562 |
| Corporate tax credits (1) | 144 | 394 | 1,111 |
| Corporate tax absorbed by tax losses (2) | 1,968 | 1,756 | 9,328 |
| Total | 30,234 | 4,765 | 32,773 |

(1) These credits correspond to corporate tax payment made in April of the following year. These credits include, amongst others, training expense credits (SENCE) and property, plant and equipment acquisition credits that are equivalent to 4% of the property, plant and equipment purchases made during the year. In addition, some credits relate to donations the Company has made during 2012 and 2011.

(2) Generation of non-operating losses (NOL's), which must be imputed or recorded in the Retained Taxable Profits Registry (FUT).

In accordance with the laws in force and as provided by article 31, No. 3 of the Income Tax Law, when profits are recorded in the FUT that have not been withdrawn or distributed are totally or partially absorbed by NOL's, the corporate tax paid on such profits (20%, 17%, 16,5%, 16%, 15%, 10% depending on the year in which profits were generated) will be considered to be a provisional payment with respect to the portion representing the absorbed accumulated tax profits.

Notes to the consolidated financial statements as of December 31, 2012

Note 23 - Income Tax and Deferred Taxes (continued)

23.1 Current tax assets, continued

Taxpayers are entitled to apply for a refund of this monthly provisional income tax payments on the absorbed profits recorded in the FUT registry via their tax returns (Form 22).

Therefore, the provisional payment for absorbed profits (PPAP) recorded in the FUT is in effect a recoverable tax, and as such the Company records it as an asset.

23.2 Current tax liabilities:

| Current tax liabilities | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|---------------------------------|------------|------------|------------|
| | ThUS\$ | ThUS\$ | ThUS\$ |
| Companies incorporated in Chile | 13,408 | 67,543 | 5,915 |
| Companies incorporated abroad | 10,206 | 7,868 | 1,174 |
| Tax under article 21 | 10 | 7 | 24 |
| Total | 23,624 | 75,418 | 7,113 |

Income tax is determined based on the Chilean fiscal rate applied, and as per Act 20,630, was fixed at 20% beginning with the fiscal year ending December 31, 2012. The provision for royalty is determined by applying the tax rate determined for net operating income (NOI). Both concepts represent the estimated amount the Company will pay for income tax and specific tax on mining activities.

23.3 Tax earnings

The Company and its subsidiaries have recorded the following consolidated balances for retained tax earnings, income not constituting revenue subject to income tax, accumulated tax losses and credit for shareholders:

Edgar Filing: CHEMICAL & MINING CO OF CHILE INC - Form 6-K

| | 12/31/2012 | 12/31/2011 | 12/31/2010 |
|---|------------|------------|------------|
| | ThUS\$ | ThUS\$ | ThUS\$ |
| Taxable profits with credit rights (1) | 1,262,201 | 1,053,651 | 602,536 |
| Taxable profits without credit rights (1) | 138,535 | 150,234 | 86,920 |
| Taxable loss | 9,931 | 15,069 | 21,630 |
| Credit for shareholders | 294,146 | 242,143 | 123,322 |

F-185

Notes to the consolidated financial statements as of December 31, 2012

Note 23 - Income Tax and Deferred Taxes (continued)

23.3

Tax earnings, continued

The FUT is a chronological registry where the profits generated and distributed by the Company are recorded. The object of the FUT is to control the accumulated tax profits of the Company that may be distributed, withdrawn or (1) remitted to the owners, shareholders or partners, and the final taxes that must be imposed, thereon called in Chile Global Aggregate Tax (that is levied on persons resident or domiciled in Chile), or Withholding Tax (that is levied on non resident persons).

The FUT Register contains profits with credit rights and profits without credit rights, which arise out of the inclusion of the net taxable income determined by the Company or the profits received by the Company that may be dividends received or withdrawals made during the period. Profits without credit rights represent tax payable by the Company within the year and filed the following year, therefore they will be deducted from the FUT Registry the following year. Profits with credit rights may be used to reduce the final tax burden of owners, shareholders or partners, which upon withdrawal are entitled to use the credits associated with the relevant profits. In summary, companies using the FUT Registry to maintain control over their profits that have not been distributed to the owners and the relevant credits associated with such profits.

23.4 Income tax and deferred taxes

Assets and liabilities recognized in the Statement of Financial Position are offset if and only if:

¹ The Company has legally recognized before the tax authority the right to offset the amounts recognized in these entries; and

² Deferred income tax assets and liabilities are derived from income tax related to the same tax authority on the same entity or tax subject; or different entities or tax subjects who intend either to settle current fiscal assets and liabilities for their net amount, or to realize assets and pay liabilities simultaneously in each of the future periods in which the Company expects to settle or recover significant amounts of deferred tax assets or liabilities.

Deferred income tax assets recognized are those income taxes to be recovered in future periods, related to:

(a) deductible temporary differences;

(b) the offset of losses obtained in prior periods and not yet subject to tax deduction; and

(c) the offset of unused credits from prior periods,

The Company recognizes a deferred tax asset when there is certainty that these can be offset with tax income from subsequent periods, losses or fiscal credits not yet used, but solely as long as it is more likely than not that there will be tax earnings in the future against which to charge to these losses or unused fiscal credits.

F-186

Notes to the consolidated financial statements as of December 31, 2012

Note 23 - Income Tax and Deferred Taxes (continued)

Deferred tax liabilities recognized refer to the amounts of income taxes payable in future periods related to taxable temporary differences.

d.1 Deferred income tax assets and liabilities net as of December 31, 2012 are detailed as follows:

| Description of deferred income tax assets and liabilities | Assets | Liabilities |
|--|------------|----------------|
| | ThUS\$ | ThUS\$ * |
| Depreciation | - | 145,251 |
| Provision for doubtful accounts impairment | - | (5,807) |

| Balances to date | 125,222 | 98,290 | 100,416 |

Disclosures of income tax expense (income)

The Company recognizes current tax and deferred taxes as income or expenses, and they are included in profit or loss, unless they arise from:

(a) a transaction or event recognized in the same period or in a different period, outside profit or loss either in other comprehensive income or directly in equity; or

(b) a business combination.

F-190

F-191

Notes to the consolidated financial statements as of December 31, 2012

Note 23 - Income Tax and Deferred Taxes (continued)

23.4 Income tax and deferred taxes, continued

The Company does not recognize any deferred tax liability in cases of taxable temporary differences associated with investments in associated companies or interest in joint ventures, because the following two conditions are jointly met:

- (a) the parent, investor or interest holder is able to control the time for reversal of the temporary difference; and
- (b) It is more likely than not that the temporary difference is not reversed in the foreseeable future.

In addition, the Company does not recognize deferred income tax assets for all deductible temporary differences from investments in associated companies or interests in joint ventures because it is not possible to meet for the following requirements:

- (a) Temporary differences are reversed in a foreseeable future; and
- (b) The Company has tax earnings, against which temporary differences can be used.

Explanation of the relationship between expense (income) for tax purposes and accounting income.

The Company has estimated that the method that discloses more significant information for the users of its financial statements is the reconciliation of tax expense (income) to the result of multiplying income for accounting purposes by the tax rate in force in Chile. This option is based on the fact that the both SQM entire amount of tax expense (income) and considering that amounts from subsidiaries incorporated in foreign countries have an insignificant amount of tax expense (income).

Reconciliation of numbers in income tax expenses (income) and the result of multiplying financial gain by the rate prevailing in Chile

Note 23 - Income Tax and Deferred Taxes (continued)

23.4 Income tax and deferred taxes, continued

Tax periods potentially subject to verification:

The Company and its subsidiaries are potentially subject to income tax audits by tax authorities in each country of operations based on the statutory time limits of each country.

Tax audits, due to their nature, are often complex and may require several years for ultimate resolution. A summary of tax periods that are potentially subject to verification, in accordance with tax regulations in force in the country of origin for our primary tax jurisdictions is provided below:

a) Chile

According to article 200 of Decree Law No, 830, the tax authority shall review for any deficiencies in tax settlements and returns, by applying a requirement of 3 years term from the expiration of the legal deadline when payment should have been made. Besides, this requirement was extended to 6 years term for the revision of taxes subject to declaration, when such declaration was not filed or has been presented maliciously false.

b) United States

In the United States, the tax authority may review tax returns for up to 3 years from the expiration date of the tax return, In the event that an omission or error is detected in the tax return of sales or cost of sales, the review can be extended for a period of up to 6 years.

c) Mexico:

In Mexico, the tax authority can review tax returns up to 5 years from the expiration date of the tax return.

d)

Spain:

In Spain, the tax authority can review tax returns up to 4 years from the expiration date of the tax return.

e)

Belgium:

In Belgium, the tax authority may review tax returns for up to 3 years from the expiration date of the tax return if no tax losses exist, In the event of detecting an omission or error in the tax return, the review can be extended for a period of up to 5 years.

f)

South Africa:

In South Africa, the tax authority may review tax returns for up to 3 years from the expiration date of the tax return, In the event an omission or error in the tax return is detected, the review can be extended for a period of up to 5 years.
