Midyear [review](#)

DIVIDEND AND BUSINESS UPDATE AUGUST 2004

Chairman's letter

Rebuilding on strong foundations

Interim dividend 2004
per 25p Ordinary share

In my foreword to the Annual Report I said that we had much to do to rebuild trust and credibility and to review how our business is run. In this Midyear review we provide our shareholders with an update on that work, outline some of the main developments in each of our business areas and provide information on the half-year results.

The issues surrounding the restatement of our proved reserves have made the first half of the year very difficult. However, I believe that the changes we have made will ensure that these problems cannot happen again. Agreement in principle with the United Kingdom's Financial Services Authority and the United States Securities and Exchange Commission (subject to their formal approval) is a

key milestone. This concludes their inquiries into the Group over reserves recategorisation and is a major step towards drawing a line under this serious occurrence.

One of the most important tasks we have faced in recent months has been to rebuild our leadership team. I am confident that with the appointments of Linda Cook as Chief Executive of Gas & Power and Peter Voser as Group Director of Finance, from October 4, we now have a strong and effective team in place.

As I outlined at the AGM, we are reviewing the structure and governance of the Shell Group. The review is proceeding at a good pace. The Steering Committee will continue to listen to shareholders as their work

develops and plan to announce their conclusions in November. You can read more about this overleaf.

This work, although important, will not distract us from the essential task of doing as well or better than our competitors across all our business activities. As you read on you will see that in some areas that is already happening. I believe that there is a real commitment throughout the organisation to make sure that we learn all the lessons from the problems of earlier this year. As a result, I remain confident that our business is fundamentally sound and that we are rebuilding on strong foundations.

Lord Oxburgh Chairman of Shell Transport.
August 2004

Malcolm Brinded (left) Managing Director of Shell Transport and Vice-Chairman of the Committee of Managing Directors and **Lord Oxburgh** (right) Chairman of Shell Transport

Managing Director s review

The half-year results outlined in this review show a satisfactory performance, helped by high oil prices and refining margins. Net income of \$8.7 billion was 7% higher than the same period in 2003. The cash flow from operations, at \$12.6 billion, helped to fund \$6.3 billion of capital investment and a 2.5% increase in interim Sterling dividends for Shell Transport shareholders which is equivalent to 17% in US Dollar terms.

While the results from our downstream businesses were encouraging, first half earnings in Exploration and Production were 7% lower than a year ago as the impact of higher oil prices was offset by write downs, tax increases and lower production.

There was some positive progress with the start of two major projects, Kashagan in Kazakhstan and Ormen Lange in Norway, and the start of production at the Coulomb, Glider and Llano fields in the Gulf of Mexico. However, the combined performance on production, costs, and reserves replacement has been disappointing. Production this year is expected to be some 3.7 to 3.8 million barrels of oil

Stanlow Refinery in Cheshire, UK

equivalent per day (boe), down from 3.9 million boe in 2003. The production outlook in 2005 and 2006 is expected to be in the range 3.5 to 3.8 million boe. Our outlook for our reserves replacement ratio for 2004 is estimated at an unsatisfactory 60% to 80%. I do, nonetheless, remain reasonably confident that we will meet the 100% reserves replacement forecast as an average over the next five years.

To improve upstream performance we will focus on five main areas. First, we are working to ensure operational excellence in our existing assets. Second, we are taking action to adjust our portfolio to ensure the right balance of long-term investments and short-term projects, and of risks and rewards. Third, we will continue our aggressive programme of exploration and new business development. Fourth, we will improve our project management skills and project delivery. Finally, we must ensure a fully competitive cost structure.

I do not underestimate the challenges this work entails. But I am convinced that we have excellent assets, exciting new projects and the determination

to improve our performance in our Exploration and Production business.

In other businesses, performance has generally been good. Gas & Power s earnings were similar to last year, after taking account of the effect of divestments, and helped by continuing increases in sales of LNG. The final investment decision for a sixth LNG train in Nigeria was taken on July 30. The Sakhalin project is on schedule to deliver the first

LNG cargo by the end of 2007 and further gas sales to Japanese utilities have been agreed. As with all our projects, we are working to ensure that it is developed in an environmentally and socially sustainable way. A key milestone was reached in a landmark gas development, the Pearl GTL project in Qatar, with the signing of the integrated Development and Production Sharing Agreement. This project confirms Shell's place at the leading edge of this exciting new industry.

Oil Products had a very good first half with CCS earnings of \$2.7 billion, up 32% on last year. This has been driven by a much stronger performance in the USA and higher refining margins.

We have also continued to develop new opportunities for profitable downstream activities including the signing of an important joint venture with Sinopec to build 500 retail stations in China.

The performance of the Chemicals business also improved, showing stronger margins, higher sales and better plant utilisation. Earnings increased from \$115 million in the first half of 2003 to \$553 million this year. The Nanhai petrochemical complex that will serve the key Chinese market is on schedule and on budget and the first world-scale PTT polymer plant has been completed in Canada.

I recognise that the first half of this year has been a difficult time for the Group and that shareholder confidence has been shaken. Restoring that confidence will take time but I think we have now started that process. There is much more to do but there is a real momentum and commitment throughout the business to deliver the high quality performance shareholders want to see.

Malcolm Brinded Managing Director of Shell Transport and Vice-Chairman of the Committee of Managing Directors. August 2004.

TO FIND OUT MORE PLEASE VISIT WWW.SHELL.COM

CMD

The Committee of Managing Directors (CMD) guides the Group by providing strategic direction, support and appraisal to Group businesses.

Jeroen van der Veer Chairman of the Committee of Managing Directors.

Malcolm Brinded Vice Chairman of the Committee of Managing Directors and Chief Executive of Exploration and Production.

Rob Routs Group Managing Director and Chief Executive of Oil Products and Chemicals.

Linda Cook Recently appointed Group Managing Director and Chief Executive of Gas and Power with effect from August 1, 2004.

Summary half-year results

The Royal Dutch/Shell Group's net income of \$8.7 billion for the first half of the year was 7% higher than the same period last year. Earnings on an estimated current cost of supplies (CCS) basis were \$8.1 billion, down 5% from a year ago. Earnings reflected lower hydrocarbon production and higher hydrocarbon prices; higher LNG volumes which were offset by lower marketing and trading income in Gas & Power; and higher earnings in Oil Products and in Chemicals.

Cash flow from operations was \$12.6 billion. This cash, together with proceeds from divestments of \$2.0 billion, continued the strong

cash generation and funded the investment program of \$6.3 billion (including minority interests), dividend payments and a reduction in debt. As at the end of June the debt ratio was 17%. Cash and cash equivalents amounted to \$2.4 billion.

Crude oil production decreased 4% year on year. Gas production decreased 5%. Excluding the effect of divestments and price effects on production entitlements, overall production was down 1%. Average Brent crude oil prices were \$33.68 a barrel, 17% above the same period in 2003, while US Henry Hub natural gas prices averaged 7% lower.
Exploration and Production segment

New CMD member

Peter Voser will become the Group's Director of Finance from October 4, 2004. He will also be appointed a Managing Director of The Shell Transport and Trading Company, p.l.c. and a Group Managing Director of the Royal

Dutch/Shell Group of Companies. At present he is the Chief Financial Officer and a member of the Group Executive Committee of the Asea Brown Boveri (ABB) Group of Companies, based in Switzerland. From 1982 to 2002 he worked for the

Peter Voser Appointed Group Director of Finance with effect from October 4, 2004.

Royal Dutch/Shell Group of Companies in a variety of finance and business roles. Mr Voser was born in Baden, Switzerland and is married with three children. He graduated in business administration from the University of Applied Sciences, Zürich, Switzerland, in 1982.

Annual General Meeting

The Company's Annual General Meeting held in London on June 28 was well attended by shareholders.

Lord Oxburgh opened the meeting and outlined the changes that had been put in place to ensure the failures that led to the restatement of the Group's proved reserves could not happen again. Malcolm Brinded then set out a review of the Group's activities over 2003 and outlined the strategy that would improve performance and total shareholder return in relation to the Group's competitors.

During more than three hours of debate, Lord Oxburgh and the other Directors answered a wide range of questions from shareholders. They addressed concerns about the

reserves restatement and subsequent changes in management. Shareholders also expressed their views on the Group's structure and governance and these views will be considered as part of the ongoing review into these issues. In response to questions about particular projects, Directors were able to provide further information about the steps being taken to minimise the environmental and social impact of Shell's activities around the world.

All the resolutions put to the meeting were taken on a poll and passed with substantial majorities. This included the adoption of the Annual Report and Accounts; the approval of the remuneration report; reappointment of the auditors and the election and re-election of a number of Directors.

earnings of \$4.7 billion were 7% lower than a year ago. Higher oil prices were more than offset by lower production, exploration write downs, a charge relating to mark-to-market valuations of certain UK gas contracts and increased tax charges.

Gas and Power earnings of \$0.9 billion compared to \$2.0 billion

a year ago. Excluding last year's income of \$1.0 billion related to the sale of Ruhrgas, earnings were similar to a year ago. LNG volumes increased 9% year on year.

Oil Products had a good half year with CCS earnings increasing by 32% to \$2.7 billion. This included much stronger performance in the USA with better

refinery utilisation and higher margins. The rebranding and upgrading of the USA retail network is on track.

Edgar Filing: SHELL TRANSPORT & TRADING CO PLC - Form 6-K

Chemicals delivered substantially improved results with earnings of \$0.6 billion, 381% higher than for the same period a year ago. This was driven by stronger demand and increased reliability.

Results of the Royal Dutch/Shell Group for six months ended June 30, 2004

Earnings by Industry Segment (Net Income basis)

Business Highlights

Our business strategy is to focus on more upstream and profitable downstream. We are working to deliver operational excellence across every area of our business, ensuring that we consistently complete projects on time and on budget. Innovation and focus on our customers' changing needs is also crucial. We are making progress with major long-term upstream projects, developments in LNG and GTL assets, and strengthening of the downstream portfolio.

Pictures

1 Exploration and Production

The Muskeg River Mine Athabasca Oil Sands Project, Canada. This joint venture will produce 155,000 barrels of bitumen (tar-like oil) per day for the next 30 years. At full rates, the project will supply the equivalent of 10% of Canada's oil needs.

2 Gas & Power

LNG tanker. The new Gemmata, together with the rest of the Shell fleet, supports Gas and Power's strategy for developing and linking downstream LNG markets with our supply projects worldwide.

3 Oil Products

Huang Gang Filling Station, Guangdong Province, China. As part of our China growth strategy, we also signed a joint-venture agreement in 2004 to develop a network of about 500 service stations in Jiangsu Province.

4 Chemicals

Nanhai, Guangdong Province, China. The CSPC-Nanhai Petrochemicals Complex represents the cornerstone of Chemicals growth strategy for Asia Pacific – the region predicted to become the largest global market for petrochemicals within the decade.

5 Other industry segments

Colorado Green wind park. The project consists of 108 turbines, each of which is 80 metres tall. The park at Colorado Green will supply power to 52,000 households and is our largest wind installation so far.

Oil Products

Joint venture in China leverages high demand

Demand for oil products has increased in the first half of the year in response to global economic growth. Some of the most significant increases in demand have been seen in China. The announcement of a joint venture with Sinopec in China will allow the Group to benefit from these opportunities. We are combining our experience of developing and managing retail networks worldwide with Sinopec's expertise in running major networks in China to develop 500 retail stations in Jiangsu Province. There will also be a continued focus on restructuring and upgrading our portfolio and a number of asset sales have been announced.

We have continued our focus on providing new products for customers including more differentiated fuels. Shell V-Power was launched in the US market and V-Power diesel was launched in Germany and Austria. Shell is the first company in Europe to launch a premium diesel containing a synthetic component. V-Power diesel offers improved fuel consumption and emissions. As well as developing these advanced conventional fuels we are supporting the development of alternative fuels through our participation in Iogen, a biofuels company which has produced the

world's first cellulose ethanol fuel derived from plant residues.

A key priority for the Oil Products business is to improve our operational performance. We are therefore implementing changes in our business that will simplify and standardise the way we operate around the world. This will make it easier for customers to do business with Shell and establish a more cost-effective and competitive operating platform.

Exploration and Production

Building for the future

The most important developments in the upstream during the first half of 2004 were the start of two major projects, Kashagan and Ormen Lange. Kashagan, in Kazakhstan, could produce up to 13 billion barrels of oil with first production expected in 2008. Ormen Lange, in Norway, in which Shell has a 17% share, is due to start production in 2007 and could supply a significant proportion of the United Kingdom's gas demand.

We have also signed a heads of agreement to re-enter Libya and develop a long-term strategic partnership with the Libyan National Oil Corporation that could lead to the development of new integrated upstream and LNG export projects.

A number of new discoveries have been made including finds in Egypt, Nigeria, the Gulf of Mexico, the Netherlands, the North Sea and Oman. In the Gulf of Mexico, the Glider, Coulomb and Llano fields started production. Operating at 2,360 metres, Coulomb contains the two deepest wells in the world. Production increased at the Athabasca Oil Sands Project and Shell Canada acquired two new oil sands leases near the Muskeg River Mine, adding a billion barrels of resources. Production increased from Bijupirá-Salema in Brazil and the Nigerian EA offshore field. However, the overall production outlook in 2004 to 2006 is lower than forecast, mainly due to ongoing field declines and the delay in the start of the Bonga project in Nigeria. Reserves replacement also continues to be challenging, with an outlook of a 60% to 80% replacement ratio in 2004. We are strongly focused on improving this in coming years.

Chemicals

Strengthening our position in key markets

We remain focused on customer service, operational performance and growing production capability. Our customer emphasis is to 'Make it easy to do business with Shell', which is led in part by technology to further improve, standardise, and streamline our processes. Operationally we are focused on safety, asset utilisation and bringing new projects on stream successfully.

Recent production growth includes the start-up of butadiene manufacturing at the Sabina Petrochemicals joint venture in Port Arthur, Texas. Butadiene is used in the manufacture of rubber and plastics products. Also in the USA, one of the liquid ethylene crackers at Deer Park, Texas was expanded to a capacity of 550,000 tonnes per year. In Canada we completed construction of the first world-scale polytrimethylene terephthalate (PTT) polymer plant with a capacity of 95,000 metric tonnes per year. The joint venture plant will produce a new material called CORTERRA™ that combines the best features of nylon and polyester and can be spun into fibres and fabrics that are durable and stain resistant and which can be used in a wide range of applications. Production is expected to begin in the fourth quarter of 2004.

We also remain focused on opportunities in the Asia Pacific region. In China, construction at the Nanhai petrochemicals complex has continued to progress well with the project on budget.

Gas & Power

Leading the way in LNG

We continue to maximise opportunities from the growing global demand for gas through our Liquefied Natural Gas (LNG), Gas to Liquids and pipeline projects. Our Sakhalin II LNG project in Russia, due to come on stream in 2007, is making strong progress in contracting its LNG volumes. In June we signed a long-term contract with Japan's Kyushu Electric Company for 0.5 million tonnes per annum (mtpa). Tokyo Electric increased its commitment to purchase LNG volumes from the project to 1.5mtpa. Toho Gas of Japan has also agreed to purchase 0.3mtpa for 23 years. The total volumes secured under long-term contracts for the project so far are 3.4mtpa. Sakhalin II is a massive project experiencing significant cost pressures; we have therefore taken vigorous action to rectify overall project management.

Elsewhere, other major gas sale contracts include an agreement to supply 4.5 billion cubic metres of gas over five years to Centrica, the United Kingdom's biggest gas supplier. This will allow Shell to make the most of its ability to draw on gas supplies from a range of North Sea fields to meet UK demand.

Good progress continues to be made in the development of Shell's Gas to Liquids project in Qatar. This includes the signing of the Development and Production Sharing Agreement in July this year, the drilling of the first of two appraisal wells in February and the award of the onshore engineering and design contract in March.

Other industry segments

Wind, Solar and Hydrogen

We continue to work to develop commercial renewables businesses in both wind and solar. The two new wind operations in the USA, at Colorado Green and Brazos, have started to reach full production. The two projects have the capacity to supply electricity to more than 80,000 homes.

In Solar, Shell is working in partnership with the German company Geosol to build the world's largest solar power station which will supply electricity to 1,800 homes. In June, Shell Solar launched a new range of solar modules, known as PowerMax™. These panels are more powerful than those currently available and will be used for both large solar installations and individual households. These developments underline Shell's commitment to applying advanced technologies to both new applications and to increases in efficiency which will be so essential to develop the solar business further.

Work has continued on a range of projects to research and develop ways of making hydrogen a practical, safe and efficient fuel. This includes the construction of a hydrogen refuelling station in Washington DC, building on the success of last year's opening of hydrogen stations in Amsterdam, Reykjavik and Tokyo.

Interim dividend 2004 6.25p per 25p Ordinary share

Payable on September 15, 2004

The Directors have declared an interim dividend of 6.25p per Ordinary share in respect of the year 2004, payable on September 15, 2004 (6.10p in 2003). This represents a total distribution to shareholders of £604 million (£590 million in 2003).

The dividend will be paid to shareholders on the register on August 13, 2004

and to holders of bearer warrants who surrender coupon 214.

The last day for receipt of applications to join or leave the Dividend Reinvestment Plan in respect of the interim dividend is August 24, 2004. Share certificates for the shares purchased under the Plan on the payment date of September 15, 2004

will be despatched to shareholders on September 28, 2004.

The amount to be paid to holders of New York Shares will be determined by the dollar/sterling exchange rate on September 15, 2004. The interim dividend will be payable on September 21, 2004 to holders of record of New York Shares as at August 13, 2004.

Governance and structure update

The Boards of Shell Transport and Royal Dutch have established a review of the Group's governance and structure. This review is being carried out by a board-level steering group chaired by Lord Kerr. The other members of the group are Maarten van den Bergh,

Sir Peter Job, Jonkheer Aarnout Loudon and Jeroen van der Veer. Its terms of reference are to explore the possible modification of Board and Group management structures and to review ways of improving decision making processes and enhancing the leadership of the Group as a whole.

Financial and legal advisors have now been appointed. The steering group is expected to make initial proposals in November and its work will be informed by the views of shareholders. Final proposals are expected to be put to the Annual General Meeting in 2005.

Dividends

pence per 25p Ordinary share

Dividends prior to 1997 have been restated to reflect the capitalisation issue that became effective on June 30 of that year, whereby two 25p Ordinary shares were issued for each 25p Ordinary share outstanding.

The total dividend paid in respect of 2003 comprises two interim dividends, a first interim dividend of 6.10p paid on September 17, 2003 and a second interim dividend of 9.65p paid on May 6, 2004.

Basic earnings per share for Shell Transport's 40% share of Group net income for the first half of 2004 is 20.0 pence per share (2003 restated on the same basis was 21.2 pence per share).

Shareholder Information The Shell Transport and Trading Company, p.l.c.
