**Gilat's SkyEdge platform selected by Cisco for tested interoperability with Cisco IP VSAT WAN Module for satellite communication solutions**

*Spacenet and Satlynx are among the first existing service providers operating Gilat's SkyEdge system to offer satellite service compatible with Cisco VSAT NM*

Petah Tikva, Israel, June 12, 2006 Gilat Satellite Networks, Ltd. (Nasdaq: GILT), today announced that its SkyEdge hub has met the Cisco Technology Developer Program criteria for interoperability with the Cisco VSAT NM for the Cisco 2800 and 3800 series Integrated Services Routers and the Cisco 2600XM, 2691 and 3700 series access routers. The Cisco VSAT NM provides Cisco integrated services router customers with the ability to maintain highly secure voice, video, data and wireless communications over high-speed satellite links.

Additionally, Spacenet and Satlynx are among the first existing SkyEdge service operators to offer satellite services compatible with the Cisco VSAT NM. Spacenet, Gilat's wholly owned subsidiary, delivers satellite managed services in the United States while Satlynx delivers satellite managed services in Europe, Middle East and Northern Africa.

This interoperability enables VSAT service providers worldwide who operate Gilat's SkyEdge hub to provide satellite services using the Cisco VSAT NM and collaborate with Cisco on helping new and existing Cisco customers deploy broadband satellite networking solutions for business continuity and backup, emergency and disaster recovery, video and content distribution and primary connectivity for rural and remote locations.

Spacenet delivers services to more than 80,000 VSATs and approximately 100 government and enterprise customers nationwide. The ability to support and service Cisco customers is exciting and we are working closely with Cisco on several new opportunities, said Spacenet's Acting CEO Glenn Katz. Valero Energy is an example of a Spacenet SkyEdge customer deploying the Cisco VSAT NM, he added.

Delivering services in over 70 countries worldwide requires a high level of flexibility from our infrastructure. Selecting a SkyEdge platform has provided us with operational flexibility along with other useful functionality. The ability to support Cisco customers using the Cisco VSAT NM is a great addition to Satlynx's capabilities and was among the reasons for Satlynx to select the SkyEdge, said Paul Heinerscheid, President & CEO of Satlynx.

Heinerscheid added, With over one million Cisco Integrated Services Routers already deployed worldwide and an additional large existing installed base of relevant routers, we are delighted to be able to work with Cisco.

The Cisco Technology Developer Program sets criteria for interoperability testing and helps leading product and service firms to deploy innovative business solutions. The program provides enterprise or service provider customers with information regarding Cisco Technology Developer Partner products and services that the Cisco Technology Developer Partner believes meet the program's criteria for interoperability with Cisco networking technology.

## Edgar Filing: GILAT SATELLITE NETWORKS LTD - Form 6-K

Cisco supports open, IP-based architectures and shares a commitment to interoperable solutions with Gilat, an experienced and innovative satellite networking leader. Through this vision, the Cisco Technology Developer Program delivers the power of choice to VSAT service providers worldwide and the ability to extend the Cisco end-to-end architecture to satellite communications, said Sunny Mahant, Product Line Manager for Cisco's Access Technology Group. With the Cisco Technology Developer Program member offerings, such as the Gilat SkyEdge satellite hub system, customers can deploy a broad range of business solutions that foster innovation and drive rapid adoption of business-critical technologies.

Gilat's Chairman and CEO Amiram Levinberg said, "Teaming with Cisco in developing and marketing interoperable networking solutions truly differentiates Gilat in the VSAT market and shows our commitment to provide our customers with an edge beyond the latest technology, via its cooperation with market leaders. We believe Cisco's interest to add satellite communication capability into its enterprise routers is good news for the satellite industry in general as it expands the addressable market for satellite communication technology and services. With tested interoperability of the Gilat SkyEdge hub and the Cisco VSAT NM, end user customers can be confident that together we can meet their ever-changing demands."

### **About SkyEdge**

Gilat's SkyEdge provides a satellite communications platform that delivers high-end voice, data and video services over a single, powerful system. It represents Gilat's deep knowledge base and field-proven product offering, acquired through nearly two decades of experience. SkyEdge's flexible architecture and efficient space segment utilization make it an ideal platform for operators and service providers. Approximately 100 SkyEdge hubs have been delivered worldwide.
