- Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))

Item 8.01 Other Events

On May 29, 2009, the Company announced top-line results from its U.S. Phase II clinical trial evaluating the use of CPP-109 in treating patients with cocaine addiction. The data from the trial showed that CPP-109 did not demonstrate statistical significance in the primary endpoint that a significantly larger proportion of CPP-109-treated subjects than placebo-treated subjects were cocaine-free during the last two weeks of the treatment period (Weeks 11 and 12). The clinical trial did not reveal any unexpected serious adverse events.

Complete analyses of the clinical trial data (secondary clinical end-points and safety data) are ongoing. Based on the results of these analyses, the Company will evaluate what measures, if any, could be applied to improve the outcome of future studies and will also determine next steps to be taken regarding the development of CPP-109 for the treatment of cocaine addiction. In addition, the Company intends to investigate the reasons for the disparity between these trial results and previously published clinical and non-clinical results evaluating vigabatrin as a treatment for cocaine addiction. The Company expects to complete the analyses during the third quarter after fully unblinding the trial data and will then formulate future development plans.

A copy of the Company's press release is attached as Exhibit 99.1 to this Form 8-K and is incorporated herein by reference.

Item 9.01 Financial Statements and Exhibits.
