TTP and TPZ distribution policies

Tortoise Pipeline & Energy Fund, Inc. (TTP) and Tortoise Power and Energy Infrastructure Fund, Inc. (TPZ) are relying on exemptive relief permitting them to make long-term capital gain distributions throughout the year. Each of TTP and TPZ, with approval of its Board of Directors (the Board), has adopted a distribution policy (the Policy) with the purpose of distributing over the course of each year, through periodic distributions as nearly equal as practicable and any required special distributions, an amount closely approximating the total taxable income of TTP and TPZ during such year and, if so determined by the Board, all or a portion of the return of capital paid by portfolio companies to TTP and TPZ during such year. In accordance with its Policy, TTP distributes a fixed amount per common share, currently \$0.4075, each quarter to its common shareholders and TPZ distributes a fixed amount per common share, currently \$0.125, each month to its common shareholders. These amounts are subject to change from time to time at the discretion of the Board. Although the level of distributions is independent of TTP s and TPZ s performance, TTP and TPZ expect such distributions to correlate with its performance over time. Each guarterly and monthly distribution to shareholders is expected to be at the fixed amount established by the Board, except for extraordinary distributions in light of TTP s and TPZ s performance for the entire calendar year and to enable TTP and TPZ to comply with the distribution requirements imposed by the Internal Revenue Code. The Board may amend, suspend or terminate the Policy without prior notice to shareholders if it deems such action to be in the best interests of TTP, TPZ and their respective shareholders. For example, the Board might take such action if the Policy had the effect of shrinking TTP s or TPZ s assets to a level that was determined to be detrimental to TTP or TPZ shareholders. The suspension or termination of the Policy could have the effect of creating a trading discount (if TTP s or TPZ s stock is trading at or above net asset value), widening an existing trading discount, or decreasing an existing premium. You should not draw any conclusions about TTP s or TPZ s investment performance from the amount of the distribution or from the terms of TTP s or TPZ s distribution policy. Each of TTP and TPZ estimates that it has distributed more than its income and net realized capital gains: therefore, a portion of your distribution may be a return of capital. A return of capital may occur, for example, when some or all of the money that you invested in TTP or TPZ is paid back to you. A return of capital distribution does not necessarily reflect TTP s or TPZ s investment performance and should not be confused with yield or income. The amounts and sources of distributions reported are only estimates and are not being provided for tax reporting purposes. The actual amounts and sources of the amounts for tax reporting purposes will depend upon TTP s and TPZ s investment experience during the remainder of their fiscal year and may be subject to changes based on tax regulations. TTP and TPZ will send you a Form 1099-DIV for the calendar year that will tell you how to report these distributions for federal income tax purposes.

Second quarter 2016 report to closed-end fund stockholders

Dear fellow stockholders.

After one of the most volatile times in recent energy history, resulting in significant oil price declines, we saw price improvement during the second fiscal quarter ending May 31, 2016. Driving this increase in oil prices was a continued decline in North American production coupled with strong demand. This further reinforces our thesis that U.S. production is driving oil prices more so than the influence of Organization of the Petroleum Exporting Countries (OPEC). Along with crude oil prices, performance also rebounded with the broad S&P Energy Select Sector® Index returning 18.9% during the second fiscal quarter. This was a strong reversal from first fiscal quarter s return of -15.9%. Energy fixed income improved as well, but did not rebound as much as energy equities.

On the geopolitical front, OPEC met in both Doha and Vienna, but as expected, the meetings were non-events and were overshadowed by supply outages in Nigeria and Canada. Nigeria, Africa s largest oil producing nation, is having ongoing issues with militants attacking pipelines and export facilities. These disruptions brought Nigeria s production to the lowest monthly average since the late 1980s. The Canadian wildfires that started at the beginning of May are contained, but contributed to well over half of the supply outages that month.

Upstream

Upstream oil and gas producers had strong positive results for the second fiscal quarter, with the Tortoise North American Oil and Gas Producers IndexSM returning 38.9%. This was in stark contrast to the first fiscal quarter s double-digit negative returns. The U.S. rig count continued to decline, contributing to slowing crude oil production. Estimates show May production averaged 8.7 million barrels per day (MMbbl/d), which is less than the April 2016 level and significantly below the level reached in April 2015.¹ U.S. production is estimated to average 8.6 MMbbl/d in 2016, down from an average of 9.4 MMbbl/d in 2015.¹ Crude oil prices, represented by West Texas Intermediate (WTI), opened the fiscal quarter at \$33.75 per barrel and continued to climb, ending the quarter at \$49.10 per barrel, indicating some balancing of the supply/demand equation.

We are encouraged to see management teams continuing to focus on increasing capital efficiency in the upstream sector. Before mid-2015, companies focused more on growth as well as exploration and production activities. More recently, many companies have turned their efforts to maximizing existing strategic assets. As such, capex budgets have continued to fall and we expect this trend to continue. As expected, we saw rising bankruptcies, especially with smaller producers that could not thrive in a low-price environment. These bankruptcies equated to a reduction of nearly 650,000 barrels per day of production, which has been instrumental in balancing the supply/demand equation. We anticipate that many of those companies will continue to produce to some extent as they restructure. The shale oil and gas producers who recognized the potential of U.S. shale early, and who acquired acreage at very low costs should still be able to prosper in the current price environment.

While we have seen a decrease in production, there has been a wide variety of results among the premier oil and gas basins. The Permian basin has flourished and remained strong while the Eagle Ford had the largest drop in production. Production in the Bakken has also declined, and production in the Marcellus remained essentially flat.

Natural gas inventories continued to be higher than average in 2016, which led to lower prices during the period. It will take time to work through the high inventories that were not depleted during the warm winter, and the overall oversupply caused by increased production over the past few years. Prices opened the fiscal quarter at \$1.62 per million British thermal units (MMBtu), increasing to end the quarter at \$2.09 per MMBtu. At the end of May, natural gas inventories were more than 30% higher than they were the same week last year and are expected to be at the highest levels on record in October 2016. Natural gas production growth is expected to rise only slightly through the rest of 2016, due to low prices and fewer rigs in operation. However, we expect to see production pick back up in 2017 as prices rise and increases in liquefied natural gas (LNGs) exports lead to expected production growth increases.¹

Midstream

The midstream sector faced technical pressure during the energy market decline, which weighed heavily on performance earlier this year. However, MLPs, as represented by the Tortoise MLP Index[®], bounced back during the second fiscal quarter returning 26.4%, with upstream MLPs outpacing their midstream counterparts. Broader pipeline companies also had a nice recovery, as reflected by the 17.2% return of the Tortoise North American Pipeline IndexSM during the quarter.

Performance within the midstream sector was positive across the board, with gathering and processing companies significantly outperforming other sub-sectors due to their greater correlation to rising commodity prices, especially to natural gas liquids (NGLs). Crude oil and natural gas MLP and other pipeline companies also experienced positive performance as market sentiment focused more on underlying fundamentals. Additionally, refined product MLP and other pipeline companies continued to perform well due to strong demand in the low price environment.

Our long-term outlook for the midstream sector remains positive. MLP and other pipeline companies have shown signs of stabilization and we have seen a decrease in counterparty risk, mainly due to oil price improvements. These oil price increases have been leading to contracts being more in-line with producers—ability to generate revenue, compared to the last six to eight months when producers were locked into contracts that made it nearly impossible to generate revenue, thus prompting contract renegotiations with pipeline companies. For many midstream companies, the priority centers on better capital efficiency. Companies are striving to ensure that their assets are fully optimized, which should lead to better returns for companies and ultimately investors. Growth opportunities still exist as our projection for capital investments in MLP, pipeline and related organic projects remains at \$120 billion for 2016 to 2018.

Even with the positive momentum achieved during the fiscal quarter, some headwinds remained. The Energy Transfer Equity/Williams Companies deal lacked resolution until after the end of the fiscal quarter, and weighed on the space. The other chief concern within the midstream sector revolved around sustainability of distributions. Distribution coverage remained healthy and cuts within the sector

(unaudited)

2016 2nd Quarter Report | May 31, 2016

have not been widespread. However, we do expect some companies to cut their distributions in order to protect their credit ratings. The key issue is the ratings agencies and their threat of a downgrade of some companies from investment grade to high yield rather than a coverage outlook issue. This threat could force otherwise stable midstream companies to elect to temporarily reduce distributions in defense of their investment grade credit ratings. The market anticipated a cut for Plains All American Pipeline L.P., which has been the most vocal on this topic. Going through a simplification exercise to lower the cost of capital and eliminate incentive distribution rights (IDRs) seems logical for the company at this point.

Downstream

Energy companies in the downstream segment of the energy value chain, including refiners and petrochemical companies, have still been producing strong free cash flows at historically high levels although these levels have compressed slightly since the peak in 2015. Refiner margins, though still attractive, have continued to narrow with higher crude oil prices. On May 30, the average price for regular gasoline increased to \$2.34 per gallon, although still a decrease of \$0.44 from the same week last year.¹ Gasoline prices are expected to head lower for the rest of 2016. On the demand side, gasoline consumption is expected to increase by 1.8% in 2016, which will be the highest annual average consumption increase on record.¹

While the price of ethane, a petrochemical feedstock, has increased, demand from petrochemicals has also continued to rise, stemming from new facilities coming online. Even though the price of ethane has increased, demand for the end product has also increased, essentially neutralizing that potential headwind. The U.S. still provides some of the lowest priced ethane in the world, thus making the U.S. well positioned for exporting. Ethylene prices tend to move in tandem with crude oil prices, so we believe prices will continue to move higher. Power and utility companies did not participate as much in the recent rebound compared to other energy sectors since they are defensive by nature and their performance had not been impacted as greatly by lower commodity prices.

Capital markets

Capital markets became cautiously optimistic and more constructive with companies focusing on operating their core assets and divesting non-strategic business activities. Within the midstream sector, there were a few equity and debt MLP transactions, with the debt transactions being particularly well received by the market.

Exploration and productions companies are continuing to raise capital, totaling just over \$13 billion for the fiscal quarter, mostly in debt. MLP and other pipeline companies raised close to \$15 billion during the second fiscal quarter, with approximately \$10 billion in equity and \$5 billion in debt.

There were no IPOs in the energy sector during the second fiscal quarter. Merger and acquisition activity among MLP and pipeline companies picked up compared to the first fiscal quarter, highlighting the value of pipeline assets, with announced transactions totaling nearly \$16 billion. The largest of these was TransCanada Corporation s acquisition of Columbia Pipeline Group, Inc. in a deal valued at approximately \$12 billion.

Concluding thoughts

Coming into mid-year, it is encouraging to see improvement in the price of oil, which has helped performance across the energy value chain, particularly in the upstream segment, that is more closely tied to commodity prices. The market seemed to echo our long-term belief that midstream fundamentals remain solid, causing a significant performance bounce back in that segment of the value chain. Now that the economy has had some time to start to work off the oversupply in the market, combined with companies becoming more capital efficient, we expect that we will see more lasting improvements throughout the second half of this year and into 2017.

We anticipate that OPEC will continue to wield less influence than in recent decades. The non-events of the two most recent OPEC meetings reinforce our belief that the U.S. is becoming a significantly more relevant player in the global energy landscape. We continue to believe that 2016 will be a milestone year for U.S. energy exports, as the U.S. becomes a sustainable, long-term supplier of low-cost energy to the rest of the world.

Sincerely,

The Managing Directors
Tortoise Capital Advisors, L.L.C.

The S&P Energy Select Sector® Index is a capitalization-weighted index of S&P 500® Index companies in the energy sector involved in the development or production of energy products. The Tortoise North American Oil and Gas Producers IndexSM is a float-adjusted, capitalization weighted index of North American energy companies engaged primarily in the production of crude oil, condensate, natural gas or natural gas liquids (NGLs). The Tortoise North American Pipeline IndexSM is a float adjusted, capitalization-weighted index of energy pipeline companies domiciled in the United States and Canada. The Tortoise MLP Index® is a float-adjusted, capitalization-weighted index of energy master limited partnerships.

The Tortoise indices are the exclusive property of Tortoise Index Solutions, LLC, which has contracted with S&P Opco, LLC (a subsidiary of S&P Dow Jones Indices LLC) (S&P Dow Jones Indices) to calculate and maintain the Tortoise MLP IndexTortoise North American Pipeline IndexSM and Tortoise North American Oil and Gas Producers IndexSM. Tortoise

Energy Infrastructure Corp. (TYG)

Fund description

TYG seeks a high level of total return with an emphasis on current distributions paid to stockholders. TYG invests primarily in equity securities of master limited partnerships (MLPs) and their affiliates that transport, gather, process or store natural gas, natural gas liquids (NGLs), crude oil and refined petroleum products.

Fund performance review

The fund s market-based and NAV-based returns for the fiscal quarter ending May 31, 2016 were 17.5% and 20.6%, respectively (including the reinvestment of distributions). Comparatively, the Tortoise MLP Index® returned 26.4% for the same period. The fund s positive performance reflects improving oil prices, which boosted performance across the energy value chain, including midstream MLPs, a decrease in counterparty risk with producers and more accommodative capital markets.

Distributable cash flow and distributions

Distributable cash flow (DCF) is distributions received from investments less expenses. The total distributions received from investments include the amount received as cash distributions from investments, paid-in-kind distributions, and dividend and interest payments. The total expenses include current or anticipated operating expenses, leverage costs and current income taxes. Current income taxes include taxes paid on net investment income, in addition to foreign taxes, if any. Taxes incurred from realized gains on the sale of investments, expected tax benefits and deferred taxes are not included in DCF.

Distributions received from investments decreased approximately 5.4% as compared to 1st quarter 2016 due primarily to net sales of investments at the end of 1st quarter 2016, partially offset by increased distribution rates on investments. Operating expenses, consisting primarily of fund advisory fees, increased 6.8% during the quarter due to higher asset-based fees. Overall leverage costs decreased 15.9% during the quarter due to lower average leverage outstanding as compared to 1st quarter 2016.

As a result of the changes in income and expenses, DCF decreased approximately 5.0% as compared to 1st quarter 2016. The fund paid a quarterly distribution of \$0.655 per share, which was unchanged over the prior quarter and an increase of 1.6% over the 2nd quarter 2015 distribution. The fund has paid cumulative distributions to stockholders of \$26.5325 per share since its inception in Feb. 2004.

The Key Financial Data table discloses the calculation of DCF and should be read in conjunction with this discussion. The difference between distributions received from investments in the DCF calculation and total investment income as reported in the Statement of Operations, is reconciled as follows: the Statement of Operations, in conformity with U.S. generally accepted accounting principles (GAAP), recognizes distribution income from MLPs and other investments on their ex-dates, whereas the DCF calculation may reflect distribution income on their pay dates; GAAP recognizes that a significant portion of the cash distributions received from MLPs and other investments are characterized as a return of capital and therefore excluded from investment income, whereas the DCF calculation includes the return of capital; and distributions received from investments in the DCF calculation include the value of dividends paid-in-kind (additional stock or MLP units), whereas such amounts are not included as income for GAAP purposes, and includes distributions related to direct investments when the purchase price is reduced in lieu of receiving cash distributions. The treatment of expenses in the DCF calculation also differs from what is reported in the Statement of Operations. In addition to the total operating expenses, including fee waiver, as disclosed in the Statement of Operations, the DCF calculation reflects interest expense, realized and unrealized gains (losses) on interest rate swap settlements, distributions to preferred stockholders, other recurring leverage expenses, as well as taxes paid on net investment income.

Net Investment Loss, before Income Taxes on the Statement of Operations is adjusted as follows to reconcile to DCF for fiscal year-to-date and 2nd quarter 2016 (in thousands):

	2016 YTD	2nd Qtr 2016
Net Investment Loss,		
before Income Taxes	\$ (38,290)	\$ (27,624)
Adjustments to reconcile to DCF:		
Distributions characterized as		
return of capital	100,119	59,733
Amortization of debt issuance costs	2,636	121
Interest rate swap expenses	(441)	(219)
Premium on redemption		
of senior notes	900	
Premium on redemption		
of MRP stock	800	
DCF	\$ 65,724	\$ 32,011

Leverage

The fund s leverage utilization increased by \$14.3 million during 2nd quarter 2016 for normal working capital purposes and represented 27.2% of total assets at May 31, 2016, above the long-term target level of 25% of total assets. The fund has maintained compliance with its applicable coverage ratios. At quarter-end, including the impact of interest rate swaps, approximately 84% of the leverage cost was fixed, the weighted-average maturity was 5.3 years and the weighted-average annual rate on leverage was 3.55%. These rates will vary in the future as a result of changing floating rates, utilization of the fund s credit facilities and as leverage and swaps mature or are redeemed.

Income taxes

During 2nd quarter 2016, the fund s deferred tax liability increased by \$108 million to \$428 million, primarily as a result of the increase in value of its investment portfolio. The fund had net realized gains of \$74 million during the quarter. To the extent that the fund has taxable income, it will owe federal and state income taxes. Tax payments can be funded from investment earnings, fund assets, or borrowings.

Please see the Financial Statements and Notes to Financial Statements for additional detail regarding critical accounting policies, results of operations, leverage, taxes and other important fund information.

For further information regarding the calculation of distributable cash flow and distributions to stockholders, as well as a discussion of the tax impact on distributions and results, please visit www.tortoiseadvisors.com.

Tortoise

MLP Fund, Inc. (NTG)

Fund description

NTG seeks to provide stockholders with a high level of total return with an emphasis on current distributions. NTG invests primarily in master limited partnerships (MLPs) and their affiliates that own and operate a network of pipeline and energy-related logistical infrastructure assets with an emphasis on those that transport, gather, process and store natural gas and natural gas liquids (NGLs). NTG targets midstream MLPs benefiting from U.S. natural gas production and consumption expansion with minimal direct commodity exposure.

Fund performance review

The fund s market-based and NAV-based returns for the fiscal quarter ending May 31, 2016 were 16.5% and 20.8%, respectively (including the reinvestment of distributions). Comparatively, the Tortoise MLP Index® returned 26.4% for the same period. The fund s positive performance reflects improving oil prices, which boosted performance across the energy value chain, including midstream MLPs, a decrease in counterparty risk with producers and more accommodative capital markets.

MLP Fund, Inc. (NTG) (continued)

Distributable cash flow and distributions

Distributable cash flow (DCF) is distributions received from investments less expenses. The total distributions received from investments include the amount received as cash distributions from MLPs, paid-in-kind distributions, and dividend and interest payments. The total expenses include current or anticipated operating expenses, leverage costs and current income taxes. Current income taxes include taxes paid on net investment income in addition to foreign taxes, if any. Taxes incurred from realized gains on the sale of investments, expected tax benefits and deferred taxes are not included in DCF.

Distributions received from investments decreased approximately 3.1% as compared to 1st quarter 2016 due primarily to the impact of trading activity, partially offset by increased distribution rates on investments. Operating expenses, consisting primarily of fund advisory fees, increased 13.7% during the quarter due to higher asset-based fees. Leverage costs declined 1.7% during the quarter due to lower average leverage outstanding as compared to 1st quarter 2016.

As a result of the changes in income and expenses, DCF decreased approximately 6.1% as compared to 1st quarter 2016. The fund paid a quarterly distribution of \$0.4225 per share, which was equal to the distribution paid in the prior quarter and 2nd quarter 2015. The fund has paid cumulative distributions to stockholders of \$9.545 per share since its inception in July 2010.

The Key Financial Data table discloses the calculation of DCF and should be read in conjunction with this discussion. The difference between distributions received from investments in the DCF calculation and total investment income as reported in the Statement of Operations, is reconciled as follows: the Statement of Operations, in conformity with U.S. generally accepted accounting principles (GAAP), recognizes distribution income from MLPs, common stock and other investments on their ex-dates, whereas the DCF calculation may reflect distribution income on their pay dates; GAAP recognizes that a significant portion of the cash distributions received from MLPs, common stock and other investments are characterized as a return of capital and therefore excluded from investment income, whereas the DCF calculation includes the return of capital; and distributions received from investments in the DCF calculation include the value of dividends paid-in-kind (additional stock or MLP units), whereas such amounts are not included as income for GAAP purposes, and includes distributions related to direct investments when the purchase price is reduced in lieu of receiving cash distributions. The treatment of expenses in the DCF calculation also differs from what is reported in the Statement of Operations. In addition to the total operating expenses, including fee waiver, as disclosed in the Statement of Operations, the DCF calculation reflects interest expense, distributions to preferred stockholders, other recurring leverage expenses, as well as taxes paid on net investment income.

Net Investment Loss, before Income Taxes on the Statement of Operations is adjusted as follows to reconcile to DCF for fiscal year-to-date and 2nd quarter 2016 (in thousands):

	2016 YTD	2nd Qtr 2016

Amortization of debt issuance costs	213	92
Premium on redemption		
of senior notes	450	
DCF	\$ 38.884	\$ 18.834

Leverage

The fund s leverage utilization increased by \$8.3 million during 2nd quarter 2016 and represented 29.7% of total assets at May 31, 2016, above the long-term target level of 25% of total assets. The fund has maintained compliance with its applicable coverage ratios. At quarter-end, approximately 77% of the leverage cost was fixed, the weighted-average maturity was 3.4 years and the weighted-average annual rate on leverage was 3.57%. These rates will vary in the future as a result of changing floating rates, utilization of the fund s credit facility and as leverage matures or is redeemed.

Income taxes

During 2nd quarter 2016, the fund s deferred tax liability increased by \$91 million to \$135 million, primarily as a result of the increase in value of its investment portfolio. The fund had net realized gains of \$34 million during the quarter. As of Nov. 30, 2015, the fund had net operating losses of \$154 million for federal income tax purposes. To the extent that the fund has taxable income in the future that is not offset by net operating losses, it will owe federal and state income taxes. Tax payments can be funded from investment earnings, fund assets, or borrowings.

Please see the Financial Statements and Notes to Financial Statements for additional detail regarding critical accounting policies, results of operations, leverage, taxes and other important fund information.

Tortoise

Pipeline & Energy Fund, Inc. (TTP)

Fund description

TTP seeks a high level of total return with an emphasis on current distributions paid to stockholders. TTP invests primarily in equity securities of North American pipeline companies that transport natural gas, natural gas liquids (NGLs), crude oil and refined products and, to a lesser extent, in other energy infrastructure companies.

Fund performance review

The fund s market-based and NAV-based returns for the fiscal quarter ending May 31, 2016 were 41.4% and 43.0%, respectively (including the reinvestment of distributions). Comparatively, the Tortoise North American Pipeline IndexSM returned 17.2% for the same period. The fund s positive performance reflects improving oil prices, which boosted performance across the energy value chain, including midstream MLPs and other pipeline companies, a decrease in counterparty risk with producers and more accommodative capital markets.

2nd fiscal quarter highlights

Distributions paid per share	\$ 0.4075
Distribution rate (as of 5/31/2016)	9.4%
Quarter-over-quarter distribution increase	0.0%
Year-over-year distribution decrease	(9.4)% *
Cumulative distribution to stockholders	
since inception in October 2011	\$ 7.6525
Market-based total return	41.4%
NAV-based total return	43.0%
Premium (discount) to NAV (as of 5/31/2016)	(14.1)%

^{*}Reflects the elimination of the capital gain component of the distribution. See Distributable cash flow and distributions on next page for additional information.

Please refer to the inside front cover of the report for important information about the fund s distribution policy.

The fund s covered call strategy, which focuses on independent energy companies that are key pipeline transporters, enabled the fund to generate current income. In higher-volatility environments, we typically extend the out-of-the-money covered calls and try to generate the same monthly income. The notional amount of the fund s covered calls averaged approximately 11.4% of total assets, and their out-of-the-money percentage at the time written averaged approximately 9.0% during the fiscal quarter.

Unlike the fund return, index return is pre-expenses and taxes.

Performance data quoted represent past performance; past performance does not guarantee future results. Like any other stock, total return and market value will fluctuate so that an investment, when sold, may be worth more or less than its original cost. Portfolio composition is subject to change due to ongoing management of the fund. References to specific securities or sectors should not be construed as a recommendation by the fund or its adviser. See Schedule of Investments for portfolio weighting at the end of the fiscal quarter.

Distributable cash flow and distributions

Distributable cash flow (DCF) is income from investments less expenses. Income from investments includes the amount received as cash or paid-in-kind distributions from common stock, master limited partnerships (MLPs), affiliates of MLPs, and pipeline and other energy companies in which the fund invests, and dividend payments on short-term investments. Income also includes the premiums received from sales of covered call options, net of amounts paid to buy back out-of-the-money options. The total expenses include current or anticipated operating expenses and leverage costs.

Distributions received from investments decreased approximately 0.5% as compared to 1st quarter 2015, primarily due to lower net premiums on options written during the quarter offset slightly by increased distribution rates on investments. Operating expenses, consisting primarily of fund advisory fees, increased by 13.3% during the quarter due to higher asset-based fees. Leverage costs declined 5.0% during the quarter due to lower average leverage outstanding as compared to 1st quarter 2016. As a result of the changes in income and expenses, DCF declined by 2.2% as compared to 1st quarter 2016. In addition, the fund had net realized losses on investments of \$6.7 million during 2nd quarter 2016.

The fund paid a quarterly distribution of \$0.4075 per share, which was unchanged over the prior quarter and a decrease of 9.4% from the 2nd quarter 2015 distribution. The fund eliminated the capital gain component of the distribution in 1st quarter 2016 because it does not anticipate the same level of capital gains following market declines over the past year. The fund may designate a portion of its distributions as capital gains and may also distribute additional capital gains in the last calendar quarter of the year if necessary to meet minimum annual distribution requirements and to avoid being subject to excise taxes. The fund s distribution policy is described on the inside front cover of this report. The fund has paid cumulative distributions to stockholders of \$7.6525 per share since its inception in Oct. 2011.

The Key Financial Data table discloses the calculation of DCF and should be read in conjunction with this discussion. The difference between income from investments in the DCF calculation and total investment income as reported in the Statement of Operations, is reconciled as follows: (1) the Statement of Operations, in conformity with U.S. generally accepted accounting principles (GAAP), recognizes distributions and dividend income from MLPs, common stock and other investments on their ex-dates, whereas the DCF calculation may reflect distributions and dividend income on their pay dates; (2) GAAP recognizes that a significant portion of the cash distributions received from MLPs, common stock and other investments are characterized as a return of capital and therefore excluded from investment income, whereas the DCF calculation includes the return of capital; (3) income from investments in the DCF calculation includes the value of dividends paid-in-kind (additional stock or units), whereas such amounts are not included as income for GAAP purposes; and (4) net premiums on options written (premiums received less amounts paid to buy back out-of-the-money options) with expiration dates during the fiscal quarter are included in the DCF calculation, whereas GAAP recognizes the net effect of options written as realized and unrealized gains (losses).

Net Investment Income on the Statement of Operations is adjusted as follows to reconcile to DCF for fiscal year-to-date and 2nd quarter 2016 (in thousands):

	2016 YTD	2nd Qtr 2016
Net Investment Income	\$ 450	\$ (184)
Adjustments to reconcile to DCF:		
Net premiums on options written	2,675	1,238
Distributions characterized		
as return of capital	4,027	2,537
Dividends paid in stock	827	421
Amortization of debt issuance costs	65	14
Premium on redemption		
of senior notes	100	
DCF	\$8.144	\$4.026

Leverage

The fund s leverage utilization was relatively unchanged during 2nd quarter 2016 and represented 24.2% of total assets at May 31, 2016, generally in-line with the long-term target level of 25% of total assets. The fund has maintained compliance with its applicable coverage ratios. At quarter-end, approximately 78% of the leverage cost was fixed, the weighted-average maturity was 3.5 years and the weighted-average annual rate on leverage was 3.27%. These rates will vary in the future as a result of changing floating rates, utilization of the fund s credit facility and as leverage matures or is redeemed.

Please see the Financial Statements and Notes to Financial Statements for additional detail regarding critical accounting policies, results of operations, leverage and other important fund information.

For further information regarding the calculation of distributable cash flow and distributions to stockholders, as well as a discussion of the tax impact on distributions, please visit www.tortoiseadvisors.com.

(6) Leverage consists of senior notes, preferred stock and outstanding borrowings under the revolving credit facility. (7) Computed by averaging daily net assets within each period.

Tortoise

Energy Independence Fund, Inc. (NDP)

Fund description

NDP seeks a high level of total return with an emphasis on current distributions paid to stockholders. NDP invests primarily in equity securities of upstream North American energy companies that engage in the exploration and production of crude oil, condensate, natural gas and natural gas liquids that generally have a significant presence in North American oil and gas fields, including shale reservoirs.

Fund performance review

The fund s market-based and NAV-based returns for the fiscal quarter ending May 31, 2016 were 44.8% and 39.0%, respectively (including the reinvestment of distributions). Comparatively, the Tortoise North American Oil and Gas Producers IndexSM returned 38.9% for the same period. The fund s performance reflects the improving conditions of upstream oil and gas producers with the increase in oil prices, driven by a decrease in North American production and an increase in demand. Liquids producers outperformed natural gas producers, particularly those in the Permian basin as it has had the best economics in the current commodity price environment.

2nd fiscal quarter highlights

Distributions paid per share	\$0.4375
Distribution rate (as of 5/31/2016)	12.8%
Quarter-over-quarter distribution increase	0.0%
Year-over-year distribution increase	0.0%
Cumulative distribution to stockholders	
since inception in July 2012	\$6.5625
Market-based total return	44.8%
NAV-based total return	39.0%
Premium (discount) to NAV (as of 5/31/2016)	(10.4)%

The fund utilizes a covered call strategy, which seeks to generate income while reducing overall volatility. The premium income generated from this strategy helped to lower NAV volatility during the quarter. The notional amount of the fund s covered calls averaged approximately 67.4% of total assets and their out-of-the-money percentage at the time written averaged approximately 10.4% during the fiscal quarter.

Energy Independence Fund, Inc. (NDP) (continued)

Distributable cash flow and distributions

Distributable cash flow (DCF) is income from investments less expenses. Income from investments includes the amount received as cash or paid-in-kind distributions from investments and dividend payments on short-term investments. Income also includes the premiums received from sales of covered call options, net of amounts paid to buy back out-of-the-money options. The total expenses include current or anticipated operating expenses and leverage costs.

Distributions received from investments increased approximately 6.5% as compared to 1st quarter 2016, primarily due to higher net premiums on options written. Operating expenses, consisting primarily of fund advisory fees, increased 14.2% during the quarter due to higher asset-based fees. Total leverage costs increased approximately 5.5% during the quarter due to slightly higher leverage utilization. As a result of the changes in income and expenses, DCF increased by approximately 5.7% as compared to 1st quarter 2016. In addition, the fund had net realized losses on investments of \$23.2 million during 2nd quarter 2016.

The fund maintained its quarterly distribution of \$0.4375 per share during 2nd quarter 2016. The fund may designate a portion of its distributions as capital gains and may also distribute additional capital gains in the last calendar quarter of the year if necessary to meet minimum annual distribution requirements and to avoid being subject to excise taxes. The fund has paid cumulative distributions to stockholders of \$6.5625 per share since its inception in July 2012.

The Key Financial Data table discloses the calculation of DCF and should be read in conjunction with this discussion. The difference between income from investments in the DCF calculation and total investment income as reported in the Statement of Operations, is reconciled as follows: (1) the Statement of Operations, in conformity with U.S. generally accepted accounting principles (GAAP), recognizes distributions and dividend income from MLPs, common stock and other investments on their ex-dates, whereas the DCF calculation may reflect distributions and dividend income on their pay dates; (2) GAAP recognizes that a significant portion of the cash distributions received from MLPs, common stock and other investments are characterized as a return of capital and therefore excluded from investment income, whereas the DCF calculation includes the return of capital; (3) income from investments in the DCF calculation includes the value of dividends paid-in-kind (additional stock or units), whereas such amounts are not included as income for GAAP purposes; and (4) net premiums on options written (premiums received less amounts paid to buy back out-of-the-money options) with expiration dates during fiscal quarter are included in the DCF calculation, whereas GAAP recognizes the net effect of options written as realized and unrealized gains (losses).

Net Investment Loss on the Statement of Operations is adjusted as follows to reconcile to DCF for fiscal year-to-date and 2nd quarter 2016 (in thousands):

	2016 YTD	2nd Qtr 2016
Net Investment Loss	\$ (438)	\$ (192)
Adjustments to reconcile to DCF:		
Net premiums on options written	11,620	6,089
Distributions characterized		
as return of capital	1,834	795
Dividends paid in stock	546	278
DCF	\$13,562	\$6,970

Leverage

The fund s leverage utilization increased by \$0.8 million as compared to Feb. 29, 2016. The fund utilizes all floating rate leverage that had an interest rate of 1.27% at May 31, 2016. Leverage represented 21.8% of total assets at quarter-end, above the long-term target level of 15% of total assets. The fund has maintained compliance with its applicable coverage ratios. The interest rate on the fund s leverage will vary in the future along with changing floating rates.

Please see the Financial Statements and Notes to Financial Statements for additional detail regarding critical accounting policies, results of operations, leverage and other important fund information.

Tortoise

Power and Energy Infrastructure Fund, Inc. (TPZ)

Fund description

TPZ seeks to provide a high level of current income to stockholders, with a secondary objective of capital appreciation. TPZ invests primarily in fixed income and dividend-paying equity securities of power and energy infrastructure companies that provide stable and defensive characteristics throughout economic cycles.

Fund performance review

The fund s market-based and NAV-based returns for the fiscal quarter ending May 31, 2016 were 26.9% and 28.2%, respectively (including the reinvestment of distributions). Comparatively, the TPZ Benchmark Composite* returned 12.5% for the same period. The fund s positive performance reflects improving oil prices, which boosted performance across the energy value chain, including energy infrastructure companies, a decrease in counterparty risk with producers and more accommodative capital markets. Power companies, an area of focus for the fund, did not participate as much in the recent rebound compared to other energy companies since they are defensive by nature. Energy equities outperformed energy fixed income securities during the fiscal quarter.

2nd fiscal quarter highlights

Monthly distributions paid per share	\$0.1250
Distribution rate (as of 5/31/2016)	8.0%
Quarter-over-quarter distribution decrease	(9.1)%**
Year-over-year distribution decrease	(9.1)%**
Cumulative distribution to stockholders	
since inception in July 2009	\$11.5250
Market-based total return	26.9%
NAV-based total return	28.2%
Premium (discount) to NAV (as of 5/31/2016)	(13.4)%

^{*}The TPZ Benchmark Composite includes the BofA Merrill Lynch U.S. Energy Index (CIEN), the BofA Merrill Lynch U.S. Electricity Index (CUEL) and the Tortoise MLP Index® (TMLP). It is comprised of a blend of 70% fixed income and 30% equity securities issued by companies in the power and energy infrastructure sectors.

Please refer to the inside front cover of the report for important information about the fund s distribution policy.

Unlike the fund return, index return is pre-expenses and taxes.

Performance data quoted represent past performance; past performance does not guarantee future results. Like any other stock, total return and market value will fluctuate so that an investment, when sold, may be worth more or less than its original cost. Portfolio composition is subject to change due to ongoing management of the fund. References to specific securities or sectors should not be construed as a recommendation by the fund or its adviser. Distributable cash flow and distributions

Distributable cash flow (DCF) is income from investments less expenses. Income from investments includes the accrued interest from corporate bonds, cash distributions and paid-in-kind distributions from master limited partnerships (MLPs) and other equity investments and dividends earned from short-term investments. The total expenses include current or anticipated operating expenses and leverage costs.

Distributions received from investments increased 0.5% as compared to 1st quarter 2016 due to the impact of trading activity. Operating expenses, consisting primarily of fund advisory fees, increased 12.5% during the quarter due to higher asset-based fees. Total leverage costs decreased slightly during the quarter. As a result of the changes in income and expenses, DCF decreased approximately 1.8% as compared to 1st quarter 2016. In addition, the fund had net realized gains on investments of \$0.1 million during 2nd quarter 2016.

The fund paid monthly distributions of \$0.125 per share during 2nd quarter 2016, which represents the historical baseline distribution supported by DCF. The fund eliminated the capital gain component of the monthly distribution because it does not anticipate the same level of capital gains following market declines over the past year. The elimination of the capital gain component of \$0.0125 per share resulted in a decrease of 9.1% from the distributions paid in the 1st quarter 2016. The fund s Board of Directors has declared monthly distributions of \$0.125 per share to be paid during 3rd quarter 2016. The fund may designate a portion of its distributions as capital gains and may also distribute additional capital gains in the last calendar quarter of the year if necessary to meet minimum annual distribution requirements and to avoid being subject to excise taxes. The fund s distribution policy is described on the inside front cover of this report. The fund has paid cumulative distributions to stockholders of \$11.525 per share since its inception in July 2009.

The Key Financial Data table discloses the calculation of DCF and should be read in conjunction with this discussion. The difference between income from investments in the DCF calculation and total investment income as reported in the Statement of Operations, is reconciled as follows: (1) U.S. generally accepted accounting principles (GAAP), recognizes distribution income from MLPs, common stock and other investments on their ex-dates, whereas the DCF calculation may reflect distribution income on their pay dates; (2) GAAP recognizes that a significant portion of the cash distributions received from MLPs, common stock and other investments are characterized as a return of capital and therefore excluded from investment income, whereas the DCF calculation includes the return of capital; (3) income from investments in the DCF calculation includes the value of dividends paid-in-kind (additional stock or units), whereas such amounts are not included as income for GAAP purposes; and (4) amortization of premium or discount for all securities is calculated using the yield to worst methodology for GAAP purposes while yield to call is used in calculating amortization for long-dated hybrid securities in the DCF calculation. The treatment of expenses in the DCF calculation also differs from what is reported in the Statement of Operations. In addition to the total operating expenses, including fee waiver, as disclosed in the Statement of Operations, the DCF calculation reflects interest expense and realized and unrealized gains (losses) on interest rate swap settlements as leverage costs.

Net Investment Income on the Statement of Operations is adjusted as follows to reconcile to DCF for fiscal year-to-date and 2nd quarter 2016 (in thousands):

	2016 YTD	2nd Qtr 2016
Net Investment Income	\$2,542	\$ 971
Adjustments to reconcile to DCF:		
Dividends paid in stock	491	250
Distributions characterized		
as return of capital	2,462	1,506
Interest rate swap expenses	(147)	(66)
Change in amortization		
methodology	36	7
DCF	\$5,384	\$2,668

Leverage

The fund s leverage utilization increased by \$3.1 million as compared to Feb. 29, 2016 and represented 25.7% of total assets at May 31, 2016, above the long-term target level of 20% of total assets. The fund has maintained compliance with its applicable coverage ratios. At quarter-end, including the impact of interest rate swaps, approximately 45% of the leverage cost was fixed, the weighted-average maturity was 1.3 years and the weighted-average annual rate on leverage was 1.76%. These rates will vary in the future as a result of changing floating rates and as swaps mature or are redeemed.

Please see the Financial Statements and Notes to Financial Statements for additional detail regarding critical accounting policies, results of operations, leverage and other important fund information.

For further information regarding the calculation of distributable cash flow and distributions to stockholders, as well as a discussion of the tax impact on distributions, please visit www.tortoiseadvisors.com.

⁽¹⁾ Q1 is the period from December through February. Q2 is the period from March through May. Q3 is the period from June through August. Q4 is the period from September through November.

⁽²⁾ Leverage costs include interest expense, interest rate swap expenses and other recurring leverage expenses.

⁽³⁾ Net investment income (loss) on the Statement of Operations is adjusted as follows to reconcile to Distributable Cash Flow (DCF): increased by the return of capital on distributions, the value of paid-in-kind distributions and the change in methodology for calculating amortization of premiums or discounts; and decreased by realized and unrealized gains (losses) on interest rate swap settlements.

- (4) Annualized.(5) Computed by averaging month-end values within each period.(6) Leverage consists of outstanding borrowings under the revolving c
