Table of Contents

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM 10-Q

Quarterly Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934
For the Quarterly Period Ended March 31, 2015
Commission File Number: 001-34025

INTREPID POTASH, INC.

(Exact Name of Registrant as Specified in its Charter)

Delaware

26-1501877

(State or other jurisdiction of
incorporation or organization)

(I.R.S. Employer
Identification No.)

707 17th Street, Suite 4200, Denver, Colorado

80202

(Address of principal executive offices)

(Zip Code)

(303) 296-3006

(Registrant's telephone number, including area code)

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files.) Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company
filer (Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

As of April 24, 2015, the registrant had 76,147,979 shares of common stock, par value \$0.001, outstanding (including 475,892 restricted shares of common stock).

INTREPID POTASH, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

"Intrepid," "our," "we," or "us" means Intrepid Potash, Inc. and its consolidated subsidiaries.

Note 1 — COMPANY BACKGROUND

We are the only producer of muriate of potash ("potassium chloride" or "potash") in the United States and one of two producers of langbeinite ("sulfate of potash magnesia"), which we market and sell as Trio[®]. We sell potash and Trio[®] primarily into the agricultural market as a fertilizer. We also sell these products into the animal feed market as a nutritional supplement and sell potash into the industrial market as a component in drilling and fracturing fluids for oil and gas wells and other industrial inputs. Our revenues are generated exclusively from the sale of potash and Trio[®]. We also produce salt and magnesium chloride from our potash mining processes, the sales of which are accounted for as by-product credits to our cost of sales. These by-product credits represented approximately 2% to 3% of total cost of goods sold in each of the last three years.

We own three solution mining facilities and two conventional underground mining facilities that we utilize for producing potash. Our solution mining production comes from our HB solar solution mine near Carlsbad, New Mexico, a solar solution mine near Moab, Utah and a solar brine recovery mine in Wendover, Utah. Our conventional production comes from our underground West and East mines near Carlsbad, New Mexico. We also operate the North compaction facility near Carlsbad, New Mexico, which services the West and HB mines. Trio[®] production comes from underground conventional mining of a mixed ore body that contains both potash and langbeinite, which is mined and processed at the East facility near Carlsbad, New Mexico.

We manage sales and marketing operations centrally. This allows us to evaluate the product needs of our customers and then centrally determine which of our production facilities to use to fill customers' orders in a manner designed to realize the highest average net realized sales price per ton. We calculate average net realized sales price per ton by deducting freight costs from gross revenues and then by dividing this result by tons of product sold during the period. We also monitor product inventory levels and overall production costs centrally. We have one reporting segment being the extraction, production, and sale of potassium-related products. Our extraction and production operations are conducted entirely in the continental United States.

Note 2 — SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Principles of Consolidation—Our consolidated financial statements include our accounts and those of our wholly owned subsidiaries. All intercompany balances and transactions have been eliminated in consolidation. In the opinion of management, all adjustments, consisting of normal recurring accruals considered necessary for a fair presentation of interim financial information, have been included.

Use of Estimates—The preparation of financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities as of the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. We base our estimates on historical experience and on various other assumptions that are believed to be reasonable under the circumstances. Accordingly, actual results may differ significantly from these estimates under different assumptions or conditions.

Significant estimates include, but are not limited to, those for proven and probable mineral reserves, the related present value of estimated future net cash flows, useful lives of plant assets, asset retirement obligations, normal inventory production levels, inventory valuations, the valuation of equity awards, the valuation of receivables, valuation of our deferred tax assets and estimated blended income tax rates utilized in the current and deferred income tax calculations. There are numerous uncertainties inherent in estimating quantities of proven and probable reserves, projecting future rates of production, and the timing of development expenditures. Future mineral prices may vary significantly from the prices in effect at the time the estimates are made, as may estimates of future operating costs. The estimate of proven and probable mineral reserves, the related present value of estimated future cash flows, and useful lives of plant assets can affect various other items including depletion, the net carrying value of our mineral properties, the useful lives of related property, plant, and equipment, depreciation expense, and estimates associated with recoverability of long-lived assets and asset retirement obligations. Specific to income tax items, we experience fluctuations in the valuation of the deferred tax assets and liabilities due to changing state income tax rates and the

blend of state tax rates.

Revenue Recognition—Revenue is recognized when evidence of an arrangement exists, risks and rewards of ownership have been transferred to customers, which is generally when title passes, the selling price is fixed and

6

Table of Contents

determinable, and collection is reasonably assured. Title passes at the designated shipping point for the majority of sales, but, in a few cases, title passes at the delivery destination. The shipping point may be the plant, a distribution warehouse, a customer warehouse, or a port. Title passes for some international shipments upon payment by the purchaser; however, revenue is not recognized for these transactions until shipment because the risks and rewards of ownership have not transferred pursuant to a contractual arrangement. Prices are generally set at the time of, or prior to, shipment. In cases where the final price is determined upon resale of the product by the customer, revenue is deferred until the final sales price is known.

Sales are reported on a gross basis. We quote prices to customers both on a delivered basis and on the basis of pick-up at our plants and warehouses. When a sale occurs on a delivered basis, we incur and, in turn, bill the customer and record as gross revenue the product sales value, freight, packaging, and certain other distribution costs. Many customers, however, arrange and pay for these costs directly and, in these situations, only the product sales are included in gross revenues.

By-Product Credits—When by-product inventories are sold, we record the sale of by-products as a credit to cost of goods sold.

Property, Plant, and Equipment—Property, plant, and equipment are stated at historical cost. Expenditures for property, plant, and equipment relating to new assets or improvements are capitalized, provided the expenditure extends the useful life of an asset or extends the asset's functionality. Property, plant, and equipment are depreciated under the straight-line method using estimated useful lives. No depreciation is taken on assets classified as construction in progress until the asset is placed into service. Gains and losses are recorded upon retirement, sale, or disposal of assets. Maintenance and repair costs are recognized as period costs when incurred. Capitalized interest, to the extent of debt outstanding, is calculated and capitalized on assets that are being constructed, drilled, or built or that are otherwise classified as construction in progress.

Mineral Properties and Development Costs—Mineral properties and development costs, which are referred to collectively as mineral properties, include acquisition costs, the cost of drilling production wells, and the cost of other development work, all of which are capitalized. Depletion of mineral properties is calculated using the units-of-production method over the estimated life of the relevant ore body. The lives of reserves used for accounting purposes are shorter than current reserve life determinations due to uncertainties inherent in long-term estimates. These reserve life estimates have been prepared by us and reviewed and independently determined by mine consultants. Tons of potash and langbeinite in the proven and probable reserves are expressed in terms of expected finished tons of product to be realized, net of estimated losses. Market price fluctuations of potash or Trio[®], as well as increased production costs or reduced recovery rates, could render proven and probable reserves containing relatively lower grades of mineralization uneconomic to exploit and might result in a reduction of reserves. In addition, the provisions of our mineral leases, including royalty provisions, are subject to periodic readjustment by the state and federal government, which could affect the economics of our reserve estimates. Significant changes in the estimated reserves could have a material impact on our results of operations and financial position.

Fair Value of Financial Instruments—Our financial instruments include cash and cash equivalents, short-term and long-term investments, restricted cash, accounts receivable, refundable income taxes, and accounts payable. These instruments are carried at cost, which approximates fair value due to the short-term maturities of the instruments. All available-for-sale investments are carried at fair value. Allowances for doubtful accounts are recorded against the accounts receivable balance to estimate net realizable value. The fair value of the long-term debt is estimated using discounted cash flow analysis based on current borrowing rates for debt with similar remaining maturities and ratings. Although there are no amounts currently outstanding under our unsecured credit facility, any borrowings that become outstanding would bear interest at a floating rate and therefore be recorded at their estimated fair value.

Earnings per Share—Basic net income or loss per common share of stock is calculated by dividing net income or loss available to common stockholders by the weighted average basic common shares outstanding for the respective period.

Diluted net income or loss per common share of stock is calculated by dividing net income or loss by the weighted average diluted common shares outstanding, which includes the effect of potentially dilutive securities. Potentially dilutive securities for the diluted earnings or loss per share calculation consist of awards of non-vested restricted

shares of common stock, non-vested performance units, and non-qualified stock options. The dilutive effect of stock based compensation arrangements are computed using the treasury stock method. Following the lapse of the vesting period of restricted shares of common stock, the shares are considered issued and therefore are included in the number of issued and outstanding shares for purposes of these calculations.

Table of Contents

Note 3 — EARNINGS PER SHARE

Potentially dilutive securities, including non-vested restricted common stock, stock options, and performance units, are excluded from the diluted weighted average shares outstanding computation in periods in which they have an anti-dilutive effect, such as when there is a net loss. The treasury stock method is used to measure the dilutive impact of non-vested restricted common stock, stock options outstanding, and performance units. For the three months ended March 31, 2015, and 2014, 91,621 and 571,609 non-vested weighted average shares of restricted common stock and 320,926 and 335,935 weighted average stock options, respectively, were anti-dilutive and therefore were not included in the diluted weighted average share calculation. For the three months ended March 31, 2015, and 2014, 73,529 and 19,874, respectively, weighted average shares of common stock underlying non-vested performance units were anti-dilutive and therefore were not included in the diluted weighted average share calculation. The following table sets forth the calculation of basic and diluted earnings per share (in thousands, except per share amounts):

	Three Months Ended March 31,	
	2015	2014
Net income (loss)	\$6,529	\$(355)
Basic weighted average common shares outstanding	75,589	75,445
Add: Dilutive effect of non-vested restricted common stock	110	—
Add: Dilutive effect of performance units	8	—
Diluted weighted average common shares outstanding	75,707	75,445
Earnings (Loss) per share:		
Basic	\$0.09	\$0.00
Diluted	\$0.09	\$0.00

Note 4— CASH, CASH EQUIVALENTS, AND INVESTMENTS

The following table summarizes the fair value of our cash and investments held in our portfolio, recorded as cash and cash equivalents or short-term or long-term investments as of March 31, 2015, and December 31, 2014 (in thousands):

	March 31, 2015	December 31, 2014
Cash	\$ 24,213	\$ 16,506
Commercial paper and money market accounts	42,573	51,083
Total cash and cash equivalents	\$ 66,786	\$ 67,589
Corporate bonds	\$ 33,307	\$ 9,432
Certificates of deposit and time deposits	1,003	1,002
Total short-term investments	\$ 34,310	\$ 10,434
Corporate bonds	\$ 11,546	\$ 11,856
Total long-term investments	\$ 11,546	\$ 11,856
Total cash, cash equivalents, and investments	\$ 112,642	\$ 89,879

The following tables summarize the cost basis, unrealized gains and losses, and fair value of our available-for-sale investments held in our portfolio as of March 31, 2015, and December 31, 2014 (in thousands):

Table of Contents

	March 31, 2015			
	Cost Basis	Unrealized		Fair Value
		Gain	Loss	
Corporate bonds	\$44,884	\$12	\$(43)) \$44,853
Certificates of deposit and time deposits	1,003	—	—	1,003
Total available-for-sale securities	\$45,887	\$12	\$(43)) \$45,856
	December 31, 2014			
	Cost Basis	Unrealized		Fair Value
		Gain	Loss	
Corporate bonds	\$21,335	\$1	\$(48)) \$21,288
Certificates of deposit and time deposits	1,002	—	—	1,002
Total available-for-sale securities	\$22,337	\$1	\$(48)) \$22,290

Note 5 — INVENTORY AND LONG-TERM PARTS INVENTORY

The following summarizes our inventory, recorded at the lower of weighted average cost or estimated net realizable value, as of March 31, 2015, and December 31, 2014, respectively (in thousands):

	March 31, 2015	December 31, 2014
Finished goods product inventory	\$39,013	\$44,137
In-process mineral inventory	14,799	19,584
Total product inventory	53,812	63,721
Current parts inventory, net	20,634	20,373
Total current inventory, net	74,446	84,094
Long-term parts inventory, net	17,700	16,366
Total inventory, net	\$92,146	\$100,460

Parts inventories are shown net of any required allowances.

During the three months ended March 31, 2015, and 2014, we recorded charges of approximately \$0.4 million and \$3.6 million, respectively, as a result of routine assessments of the lower of weighted average cost or estimated net realizable value on our finished goods product inventory.

Table of Contents

Note 6 — PROPERTY, PLANT, EQUIPMENT, AND MINERAL PROPERTIES

“Property, plant, equipment, and mineral properties, net” were comprised of the following (in thousands):

	March 31, 2015	December 31, 2014
Buildings and plant	\$269,090	\$268,032
Machinery and equipment	530,332	529,358
Vehicles	13,581	13,799
Office equipment and improvements	19,363	19,260
Ponds and land improvements	74,636	73,933
Total depreciable assets	907,002	904,382
Accumulated depreciation	(288,768) (271,294
Total depreciable assets, net	\$618,234	\$633,088
Mineral properties and development costs	\$163,741	\$163,197
Accumulated depletion	(19,508) (17,544
Total depletable assets, net	\$144,233	\$145,653
Land	909	909
Construction in progress	\$6,812	\$5,600
Total property, plant, equipment, and mineral properties, net	\$770,188	\$785,250

We incurred the following expenses for depreciation, depletion, and accretion, including expenses capitalized into inventory, for the following periods (in thousands):

	Three Months Ended March 31,	
	2015	2014
Depreciation	\$18,879	\$18,260
Depletion	1,973	983
Accretion	424	406
Total incurred	\$21,276	\$19,649

Note 7 — DEBT

Unsecured Credit Facility— We have an unsecured credit facility, led by U.S. Bank, as administrative agent, and Wells Fargo Bank, as syndication agent. This unsecured revolving credit facility provides credit of up to \$250 million. The actual amount available to us is limited by our leverage ratio, which may not exceed 3.5, and our fixed charge coverage ratio, which may not be below 1.3. As of March 31, 2015, the full amount of the facility was available to us. Under the facility, the leverage ratio is defined as the ratio of total funded indebtedness to adjusted EBITDA (earnings before interest, income taxes, depreciation, amortization, and certain other expenses) for the prior four fiscal quarters. The fixed charge coverage ratio is defined as the ratio of adjusted EBITDA for the prior four fiscal quarters to fixed charges.

The facility is unsecured and is guaranteed by our material subsidiaries. The facility has a maturity date of August 2018. As of March 31, 2015, and December 31, 2014, there were no amounts outstanding under the facility. We were in compliance with the covenants under the credit facility as of March 31, 2015.

Unsecured Senior Notes—In April 2013, we issued \$150 million aggregate principal amount of unsecured senior notes (“the Notes”) pursuant to a note purchase agreement entered into in August 2012. We received proceeds of \$149.3 million, net of offering costs. The Notes consist of the following series:

Table of Contents

\$60 million of 3.23% Senior Notes, Series A, due April 16, 2020

\$45 million of 4.13% Senior Notes, Series B, due April 14, 2023

\$45 million of 4.28% Senior Notes, Series C, due April 16, 2025

The Notes are senior unsecured obligations and rank equally in right of payment with any other unsubordinated unsecured indebtedness of ours. The Notes are subject to the same leverage ratio and fixed charge coverage ratio as apply under the credit facility. The obligations under the Notes are unconditionally guaranteed by our material subsidiaries.

We were in compliance with the covenants under the Notes as of March 31, 2015.

Interest is paid semiannually on April 16 and October 16 of each year. Interest expense is recorded net of any capitalized interest associated with investments in capital projects. We incurred gross interest expense of \$1.7 million for both the three months ended March 31, 2015, and 2014. We capitalized \$23,000 and \$0.3 million of interest during the three months ended March 31, 2015, and 2014, respectively.

Note 8 — ASSET RETIREMENT OBLIGATION

We recognize an estimated liability for future costs associated with the abandonment and reclamation of our mining properties. A liability for the fair value of an asset retirement obligation and a corresponding increase to the carrying value of the related long-lived asset are recorded as the mining operations occur or the assets are acquired.

Our asset retirement obligation is based on the estimated cost to abandon and reclaim the mining operations, the economic life of the properties, and federal and state regulatory requirements. The liability is discounted using credit adjusted risk-free rate estimates at the time the liability is incurred or when there are upward revisions to estimated costs. The credit adjusted risk-free rates used to discount our abandonment liabilities range from 6.9% to 8.5%.

Revisions to the liability occur due to construction of new or expanded facilities, changes in estimated abandonment costs or economic lives, or if federal or state regulators enact new requirements regarding the abandonment or reclamation of mines.

Following is a table of the changes to our asset retirement obligation for the following periods (in thousands):

	Three Months Ended March 31,	
	2015	2014
Asset retirement obligation, at beginning of period	\$22,037	\$21,047
Liabilities settled	—	(77
Liabilities incurred	—	—
Changes in estimated obligations	—	—
Accretion of discount	424	406
Total asset retirement obligation, at end of period	\$22,461	\$21,376

The current portion of the asset retirement obligation of \$1.6 million is included in "Other" current liabilities on the condensed consolidated balance sheets as of March 31, 2015, and December 31, 2014. The undiscounted amount of asset retirement obligation is \$57.7 million as of March 31, 2015.

Note 9 — COMPENSATION PLANS

Cash Bonus Plan—We have cash bonus plans that allow participants to receive varying percentages of their aggregate base salary. Any awards under the cash bonus plans are based on a variety of elements related to our performance in certain production, operational, financial, and other areas, as well as the participants' individual performance. We accrue cash bonus expense related to the current year's performance.

Equity Incentive Compensation Plan—Our Board of Directors and stockholders adopted a long-term incentive compensation plan called the Intrepid Potash, Inc. Equity Incentive Plan, as Amended and Restated (the "Plan"). We have issued common stock, restricted shares of common stock, performance units, and non-qualified stock option awards under the Plan. As of March 31, 2015, the following awards were outstanding under the plan: 481,288 shares of non-vested restricted shares of common stock; non-vested performance units representing 383,447 shares of common stock; and options to

Table of Contents

purchase 319,972 shares of common stock. As of March 31, 2015, approximately 2.9 million shares of common stock remained available for issuance under the Plan.

Common Stock—On an annual basis, under the Plan, the Compensation Committee of the Board of Directors (the "Compensation Committee") has approved the award of shares of common stock to the non-employee members of the Board of Directors as compensation for service for the period ending on the date of our annual stockholders' meeting for the following year. These shares of common stock were granted without restrictions and vested immediately.

Non-vested Restricted Shares of Common Stock—Under the Plan, grants of non-vested restricted shares of common stock have been awarded to executive officers, other key employees, and consultants. The awards contain service conditions associated with continued employment or service. The terms of the non-vested restricted shares of common stock provide voting and regular dividend rights to the holders of the awards. Upon vesting, the restrictions on the restricted shares of common stock lapse and the shares are considered issued and outstanding.

Since 2009, the Compensation Committee has granted restricted shares of common stock under the Plan in the first quarter of each year to our executive management team and other selected employees as part of an annual equity award program. These awards vest ratably over three years. From time to time, the Compensation Committee grants restricted shares of common stock to newly hired or promoted employees or other employees or consultants who have achieved extraordinary personal performance objectives. These restricted shares of common stock generally vest over one- to four-year periods.

In measuring compensation expense associated with the grant of non-vested restricted shares of common stock, we use the fair value of the award, determined as the closing stock price for our common stock on the grant date.

Compensation expense is recorded monthly over the vesting period of the award. Total compensation expense related to the non-vested restricted shares of common stock awards was \$0.9 million and \$0.8 million for the three months ended March 31, 2015, and 2014, respectively. These amounts are net of estimated forfeiture adjustments. As of March 31, 2015, there was \$6.8 million of total remaining unrecognized compensation expense related to non-vested restricted shares of common stock that will be expensed through 2018.

A summary of activity relating to our non-vested restricted shares of common stock for the three months ended March 31, 2015, is presented below.

	Shares	Weighted Average Grant-Date Fair Value
Non-vested restricted shares of common stock, beginning of period	464,769	\$ 16.49
Granted	237,256	\$ 14.28
Vested	(198,141) \$ 17.80
Forfeited	(22,596) \$ 15.44
Non-vested restricted shares of common stock, end of period	481,288	\$ 14.91

Performance Units—In 2015, the Compensation Committee granted at-risk performance units under the Plan to a member of our executive team as part of their annual compensation package. The performance units vest in February 2018 and contain market-based conditions relating to one-, two- and three-year performance periods beginning on the grant date. A total of 378,150 shares of common stock are available for future payout under these performance units, subject to continued employment through the vesting date.

In 2013 and 2012, the Compensation Committee granted performance units under the Plan to certain members of our executive management team as part of the annual equity award program. The performance units vest ratably over three years and contain operational- and market-based conditions relating to the year of grant. The time frames for meeting both the operational- and market-based conditions of the 2013 and 2012 grants have passed, and a total of 5,297 shares of common stock are available for future payout under these performance units, subject to continued employment of the individual grantees through the vesting dates.

Non-qualified Stock Options—From 2009 to 2011, the Compensation Committee issued non-qualified stock options under the Plan in the first quarter of each year to our executive management and other selected employees as part of our annual award program. These stock options generally vested ratably over three years. In measuring compensation

Table of Contents

expense for options, we estimated the fair value of the award on the grant dates using the Black Scholes option valuation model. Option valuation models require the input of highly subjective assumptions, including the expected volatility of the price of the underlying stock.

As of March 31, 2014, all outstanding stock options were fully vested. Realized tax benefits from tax deductions for exercised options in excess of the deferred tax asset attributable to stock compensation for these options are recorded as “excess tax benefits” when the tax deductions occur.

A summary of our stock option activity for the three months ended March 31, 2015, is as follows:

	Shares	Weighted Average Exercise Price	Aggregate Intrinsic Value (1)	Weighted Average Remaining Contractual Life	Weighted Average Grant-Date Fair Value
Outstanding non-qualified stock options, end of period	319,972	\$26.16	\$—	3.4	\$13.05
Vested or expected to vest, end of period	319,972	\$26.16	\$—	3.4	\$13.05
Exercisable non-qualified stock options, end of period	319,972	\$26.16	\$—	3.4	\$13.05

(1) The intrinsic value of a stock option is the amount by which the market value exceeds the exercise price as of the end of the period presented.

Note 10 — INCOME TAXES

Our effective tax rate is impacted primarily by the amount of taxable income associated with each jurisdiction in which our income is subject to income tax, permanent differences between the financial statement carrying amounts and tax bases of assets and liabilities.

A summary of the provision for income taxes is as follows (in thousands):

	Three Months Ended March 31,	
	2015	2014
Current portion of income tax expense (benefit)	\$114	\$—
Deferred portion of income tax expense (benefit)	2,957	(2,778)
Total income tax expense (benefit)	\$3,071	\$(2,778)
Effective tax rate	32.0	% (88.7)

During the three months ended March 31, 2015, our effective tax rate differed from the statutory rate primarily as a result of the benefit from estimated depletion deductions. During the three months ended March 31, 2014, in addition to the items noted above, we also benefited from a discrete adjustment related to the reversal of a \$1.7 million valuation allowance related to our New Mexico net operating loss carry forwards, as those carry forwards became realizable based on legislation passed by the State of New Mexico in the first quarter of 2014.

The blended state tax rate applied to the deferred tax calculation is subject to change due to changes in state laws and changes in the mix of our business and the states in which we have a taxable relationship. This creates fluctuations in the value of our net deferred tax asset.

Table of Contents

Note 11 — COMMITMENTS AND
CONTINGENCIES

Marketing Agreements—We have a marketing agreement appointing PCS Sales (USA), Inc. (“PCS Sales”) as our exclusive sales representative for potash export sales, with the exception of sales to Canada and Mexico, and appointing PCS Sales as our non-exclusive sales representative for potash sales into Mexico. Trio[®] is also marketed under this arrangement. This agreement is cancelable with 30 days' written notice.

Reclamation Deposits and Surety Bonds—As of March 31, 2015, we had \$18.0 million of security placed principally with the State of Utah and the Bureau of Land Management for eventual reclamation of our various facilities. Of this total requirement, as of March 31, 2015, \$0.5 million consisted of long-term restricted cash deposits reflected in “Other” long-term assets on the condensed consolidated balance sheets, and \$17.5 million was secured by surety bonds issued by an insurer. The surety bonds are held in place by an annual fee paid to the issuer.

We may be required to post additional security to fund future reclamation obligations as reclamation plans are updated or as governmental entities change requirements.

New Mexico Employment Credits—Beginning in 2011, based on an approval and payment of an application with the State of New Mexico, we began recording an estimate of refundable employment-related credits for qualified wages paid in New Mexico, known as the New Mexico High Wage Jobs Credit. The estimated recoverable value of these credits has been, and continues to be, reflected as a reduction to production costs and amounts yet to be collected are recorded in “Other receivables” in the condensed consolidated balance sheets in the same period in which the credit is earned.

In the third quarter of 2013, the New Mexico Taxation and Revenue Department denied our application to receive the New Mexico High Wage Jobs Credit for certain prior years' filings. Considering the uncertainty associated with collection of these credits, we recorded an additional allowance of approximately \$2.8 million in the third quarter of 2013, for credits relating to the denied periods in order to reflect the denial of the claimed credits. In March 2014, as a result of our continuing efforts to collect these credits, we received notification from the New Mexico Taxation and Revenue Department that \$5.9 million of credits previously denied were approved. Accordingly, during the first quarter of 2014, we reversed \$2.9 million of the previously established allowance to reflect the collectability of these credits. These credits are typically considered in our product inventory calculations as they relate to the labor associated with operations. As the inventory associated with the periods during which the credits were originally earned has since been sold, we recorded the reversal of the allowance as "Other (income) expense" in the condensed consolidated statement of operations for the three months ended March 31, 2014. As of March 31, 2015, we have a receivable of \$2.0 million, net of an allowance of \$0.7 million, associated with the New Mexico High Wage Jobs Credits and we intend to continue to vigorously pursue recovery of all unpaid credits.

Legal—We are subject to litigation. We have determined that there are no material claims outstanding as of March 31, 2015. We have established a legal accrual for loss contingencies that are considered probable and reasonably estimable.

Future Operating Lease Commitments—We have operating leases for land, mining and other operating equipment, an airplane, offices, and railcars, with original terms ranging up to 20 years.

Rental and lease expenses follow for the indicated periods (in thousands):

For the three months ended March 31, 2015	\$1,744
For the three months ended March 31, 2014	\$1,582

Table of Contents

Note 12 — FAIR VALUE MEASUREMENTS

We applied the provisions of the Financial Accounting Standards Board ("FASB") Accounting Standards Codification™ ("ASC") Topic 820, Fair Value Measurements and Disclosures, for all financial assets and liabilities measured at fair value on a recurring basis. The topic establishes a framework for measuring fair value and requires disclosures about fair value measurements. ASC Topic 820 defines fair value as the price that would be received to sell an asset or paid to transfer a liability (an exit price) in an orderly transaction between market participants at the measurement date. The topic establishes market or observable inputs as the preferred sources of values, followed by assumptions based on hypothetical transactions in the absence of market inputs. The topic also establishes a hierarchy for grouping these assets and liabilities based on the significance level of the following inputs, as follows:

Level 1—Quoted prices in active markets for identical assets and liabilities.

Level 2—Quoted prices in active markets for similar assets and liabilities, quoted prices for identical or similar instruments in markets that are not active, and model derived valuations whose inputs are observable or whose significant value drivers are observable.

Level 3—Significant inputs to the valuation model are unobservable.

The following is a listing of our assets and liabilities required to be measured at fair value on a recurring basis and where they are classified within the hierarchy as of March 31, 2015, and December 31, 2014 (in thousands):

		Fair Value at Reporting Date Using		
		Quoted Prices in		
		Active Markets	Significant	Significant
		for Identical	Observable	Unobservable
		Assets or	Inputs	Inputs
		Liabilities	(Level 2)	(Level 3)
		(Level 1)		
Investments				
Corporate bonds	March 31, 2015	\$—	\$44,853	\$—
		Fair Value at Reporting Date Using		
		Quoted Prices in		
		Active Markets	Significant	Significant
		for Identical	Observable	Unobservable
		Assets or	Inputs	Inputs
		Liabilities	(Level 2)	(Level 3)
		(Level 1)		
Investments				
Corporate bonds	December 31, 2014	\$—	\$21,288	\$—

Financial assets or liabilities are categorized within the hierarchy based upon the lowest level of input that is significant to the fair value measurement. Below is a general description of our valuation methodologies for financial assets and liabilities, which are measured at fair value and are included on the condensed consolidated balance sheets. Our available-for-sale investments consist of corporate bonds that are valued using Level 2 inputs. Market pricing for these investments is obtained from an established financial markets data provider.

The methods described above may result in a fair value estimate that may not be indicative of net realizable value or may not be reflective of future fair values and cash flows. While we believe that the valuation methods used are appropriate and consistent with the requirements of ASC Topic 820 and the methods used by other marketplace participants, we recognize that third parties may use different methodologies or assumptions to determine the fair value of certain financial instruments that could result in a different estimate of fair value at the reporting date.

Table of Contents

Financial Instruments—The carrying values and estimated fair values of our financial instruments as of March 31, 2015, and December 31, 2014, are as follows (in thousands):

	March 31, 2015		December 31, 2014	
	Carrying Value	Fair Value	Carrying Value	Fair Value
Long-term debt	\$ 150,000	\$ 140,000	\$ 150,000	\$ 138,000

For cash and cash equivalents, certificate of deposit investments, accounts receivable, refundable income taxes, and accounts payable, the carrying amount approximates fair value because of the short-term maturity of these instruments. The estimated fair value of the long-term debt is estimated using a discounted cash flow analysis based on current borrowing rates for debt with similar remaining maturities and ratings (a Level 2 input) and is designed to approximate the amount at which the instruments could be exchanged in an arm's length transaction between knowledgeable willing parties.

Note 13 — RESTRUCTURING CHARGE

In January 2014, in response to declining potash prices and completion of our major capital projects, we undertook a number of cost saving actions that were intended to better align our cost structure with the business environment. These initiatives included the elimination of approximately 7% of the workforce, reduction in the use of outside professionals, and cutbacks in other general and administrative areas. In early 2014, we also temporarily decreased executive and senior management compensation; we reinstated most executive and senior management salaries in mid-2014 and reinstated other compensation elements in 2015. For the three months ended March 31, 2014, we recognized a restructuring expense of \$1.8 million, which is comprised primarily of severance-related payments.

Note 14 — RECENT ACCOUNTING PRONOUNCEMENTS

In May 2014, the FASB issued Accounting Standards Update No. 2014-09, "Revenue from Contracts with Customers (Topic 606)," which requires revenue to be recognized based on the amount an entity is expected to be entitled to for promised goods or services provided to customers. The standard also requires expanded disclosures regarding contracts with customers. The guidance in this standard supersedes the revenue recognition requirements in Topic 605, "Revenue Recognition", and most industry-specific guidance. This guidance is effective for us beginning January 1, 2017, with retrospective application required, subject to certain practical expedients. We are currently evaluating the requirements of this standard, and have not yet determined the impact on our results of operations or financial position.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF
ITEM 2. OPERATIONS

This Quarterly Report on Form 10-Q contains forward looking statements within the meaning of the Securities Exchange Act of 1934, as amended (the "Exchange Act"), and the Securities Act of 1933, as amended (the "Securities Act"). These forward looking statements are made pursuant to the safe harbor provisions of the Private Securities Litigation Reform Act of 1995. All statements in this Quarterly Report on Form 10-Q other than statements of historical fact are forward looking statements. Forward-looking statements include statements about our future results of operations and financial position, our business strategy and plans, and our objectives for future operations, among other things. In some cases, you can identify these statements by forward looking words, such as "estimate," "expect," "anticipate," "project," "plan," "intend," "believe," "forecast," "foresee," "likely," "may," "should," "goal," "target," "might," and "continue." Forward looking statements are only predictions based on our current knowledge, expectations, and projections about future events.

These forward-looking statements are subject to a number of risks, uncertainties, and assumptions, including the following:

- changes in the price, demand, or supply of potash or Trio®/langbeinite
 - circumstances that disrupt or limit our production, including operational difficulties or operational variances due to geological or geotechnical variances
- interruptions in rail or truck transportation services, or fluctuations in the costs of these services
- increased labor costs or difficulties in hiring and retaining qualified employees and contractors, including workers with mining, mineral processing, or construction expertise
- the costs of, and our ability to successfully construct, commission, and execute, any of our strategic projects
- adverse weather events, including events affecting precipitation and evaporation rates at our solar solution mines
- changes in the prices of raw materials, including chemicals, natural gas, and power
- the impact of federal, state, or local governmental regulations, including environmental and mining regulations; the enforcement of those regulations; and governmental policy changes
- our ability to obtain any necessary governmental permits relating to the construction and operation of assets
- changes in our reserve estimates
- competition in the fertilizer industry
- declines or changes in U.S. or world agricultural production or fertilizer application rates
- declines in the use of potash products by oil and gas companies in their drilling operations
- changes in economic conditions
- our ability to comply with covenants in our debt-related agreements to avoid a default under those agreements, or the total amount available to us under our credit facility is reduced, in whole or in part, because of covenant limitations
- disruption in the credit markets
- our ability to secure additional federal and state potash leases to expand our existing mining operations
- the other risks, uncertainties, and assumptions described in Item 1A. Risk Factors of our Annual Report on Form 10-K for the year ended December 31, 2014, as updated by this Quarterly Reports on Form 10-Q

In addition, new risks emerge from time to time. It is not possible for our management to predict all risks that may cause actual results to differ materially from those contained in any forward-looking statements we may make.

In light of these risks, uncertainties, and assumptions, the future events and trends discussed in this Quarterly Report on Form 10-Q may not occur and actual results could differ materially and adversely from those anticipated or implied in these forward-looking statements. As a result, you should not place undue reliance on these forward-looking statements. We undertake no obligation to publicly update any forward-looking statements, except as required by law.

Table of Contents

Our Company

We are the only producer of potash in the United States and are one of two producers of langbeinite, which we market and sell as Trio[®]. We sell potash and Trio[®] primarily into the agricultural market as a fertilizer. We also sell these products into the animal feed market as a nutritional supplement and sell potash into the industrial market as a component in drilling and fracturing fluids for oil and gas wells and other industrial inputs. Our revenues are generated exclusively from the sale of potash and Trio[®]. We also produce salt and magnesium chloride from our potash mining processes, the sales of which are accounted for as by-product credits to our cost of sales. These by-product credits represented approximately 2% to 3% of total cost of goods sold in each of the last three years. We own three solution mining facilities and two conventional underground mining facilities that we utilize for producing potash. Our solution mining production comes from our HB solar solution mine near Carlsbad, New Mexico, a solar solution mine near Moab, Utah and a solar brine recovery mine in Wendover, Utah. Our conventional production comes from our underground West and East mines near Carlsbad, New Mexico. We also operate the North compaction facility near Carlsbad, New Mexico, which services the West and HB mines. Trio[®] production comes from underground conventional mining of a mixed ore body that contains both potash and langbeinite, which is mined and processed at the East facility near Carlsbad, New Mexico. We have additional opportunities to develop mineralized deposits of potash in New Mexico as well as to continue the optimization of our processing plants. These opportunities potentially include additional solution mining activities, additional recoveries of langbeinite and acceleration of production from our reserves.

We routinely post important information about us and our business, including information about upcoming investor presentations, on our website under the Investor Relations tab. We encourage investors and other interested parties to enroll on our website to receive automatic email alerts or Really Simple Syndication (RSS) feeds regarding new postings. Our website is www.intrepidpotash.com.

Significant Business Trends and Activities

Our financial results have been impacted by several significant trends, which are described below. We expect that these trends will continue to drive our results of operations, cash flows, and financial position.

- **Potash demand.** Our potash sales volumes were strong in the first quarter 2015, as we sold 231,000 tons compared to 242,000 in the same period last year. As is often the case, the timing of spring purchasing by customers which occurs in anticipation of the start of the application season are significant drivers of our sales volumes. Demand for potash into retail storage space has been strong. We believe this demand is the result of purchasing to avoid transportation issues similar to those in 2014, as well as expectations of farmer application. We believe significant nutrient draw has occurred in the last two growing seasons and needs to be replenished to maximize yields. As expected, we experienced a predictable decrease in our sales volumes into the industrial market. We believe our sales volumes to industrial customers will continue to decrease, and potentially pressure our average net realized sales price, during the remainder of 2015, as oil and gas drilling activity slows in response to lower crude pricing.

Our ability to supply tons to our customers on a timely basis continues to be a fundamental element to our strategy to maintain strong sales volumes. We utilize our geographic location advantage, as well as our strong distribution system, to effectively position product closer to our customers.

The specific timing of when farmers apply potash remains highly weather dependent and varies across the numerous growing regions within the United States. The timing of potash sales is significantly influenced by the marketing programs of potash producers, as well as retailers storage volumes closer to the farm gate. The combination of these items results in variability in potash sales and shipments, thereby increasing volatility of sales volumes from quarter to quarter and season to season.

- **Potash prices.** Our average net realized sales price for potash increased to \$362 per ton in the first quarter of 2015 from \$317 in the first quarter of 2014 and reflects the full impact of price increases that occurred in the second half of 2014. Potash prices are a significant driver of profitability for our business. Domestic pricing of our potash is influenced principally by the price established by our competitors. We are also experiencing price pressure due to global producers importing tonnage into the North American potash market. The interaction of global potash supply and demand, ocean, land and barge freight rates, and currency fluctuations also influence pricing. Any of these factors

could have a positive or negative impact on the price of our products. As global potash supply currently exceeds global demand levels, we expect potash prices may be pressured throughout the remainder of 2015.

- Tri[®] prices and demand. Our sales volumes for Tri[®] in the first quarter of 2015 was 72% higher than in the same period in 2014. We were able to sell more premium-sized product as we have continued to increase our production of premium-sized

Table of Contents

product. Our sales of standard-sized Trio[®] into the domestic agricultural market also increased over the same period a year ago. Our average net realized sales price for Trio[®] was \$367 per ton in the first quarter of 2015, an increase from \$340 per ton in the first quarter 2014. The benefits of a low-chloride specialty product and the recognition of the value of magnesium and sulfate have also contributed to our success with Trio[®]. Demand for granular- and premium-sized Trio[®] continues to drive improved net realized sales price for Trio[®].

Selected Operating and Financial Data

The following tables present selected operations data for the periods noted. Analysis of the details of this information is contained throughout this discussion. We present this table as a summary of information relating to key indicators of financial condition and operating performance that we believe are important. We calculate average net realized sales price by deducting freight costs from gross revenues and then by dividing this result by tons of product sold during the period.

(1) Additional information about our non-GAAP financial measures is set forth under the heading "Non-GAAP Financial Measures."

Amounts are presented net of by-product credits. On a per-ton basis, by-product credits were \$8 and \$6 for the (2)three months ended March 31, 2015, and 2014, respectively. By-product credits were \$1.8 million and \$1.4 million for the three months ended March 31, 2015, and 2014, respectively.

Table of Contents

Results of Operations

Operating Highlights

Net income for the first quarter of 2015 was \$6.5 million, or \$0.09 per diluted share, and cash flows from operating activities were \$32.7 million.

Potash

The majority of our revenues and gross margin are derived from the production and sales of potash.

We sold 231,000 tons of potash in the first quarter of 2015 compared with 242,000 tons sold in the first quarter of 2014. As shown below, our potash sales mix was impacted by the decrease in sales volumes to the industrial market as noted above.

The table below shows our potash sales mix for the three months ended March 31, 2015, and 2014.

	Three Months Ended March 31,	
	2015	2014
Agricultural	81%	77%
Industrial	14%	19%
Feed	5%	4%

Our production volume of potash in the first quarter of 2015 increased to 237,000 tons, compared with 220,000 tons produced in the first quarter of 2014. The production increase was due to a 54% increase in production from our solar solution facilities primarily resulting from production increases at our HB mine, offset by a decrease of 16% at our conventional facilities as we experienced reduced recoveries due to variabilities in operating factors at those facilities. The increase in solar solution production resulted in a slight decrease of our cash operating costs to \$199 per ton in the first quarter of 2015, compared with \$205 per ton in the first quarter of 2014.

Trio[®]

Our Trio[®] production was higher in the first three months of 2015 than in the same period in 2014 as we experienced increased efficiency with the conversion from standard- to premium-sized Trio[®]. Our focus is conversion of standard-sized product into premium-sized Trio[®] through a process we call pelletization. Pricing for Trio[®] has risen steadily over the last year. We continue to focus our efforts on the granular- and premium- domestic markets. Our sales of Trio[®] increased to 62,000 tons in the first quarter of 2015 as compared with 36,000 tons in the first quarter of 2014. During the first quarter 2015, we also sold greater volumes of standard-sized Trio[®] into the domestic agricultural market compared to the same period in the prior year.

In the first quarter of 2015, as compared with 2014, our average Trio[®] gross margin increased by \$69 per ton as our average net realized sales price for Trio[®] increased \$27 per ton, and our cash operating costs for Trio[®] decreased \$35 per ton.

Our export sales of Trio[®] tend to be in larger quantities and with more variability as to the timing of those sales. As a result, the percentage of sales into the export market as compared to the domestic market can fluctuate significantly from period to period, as shown in the table below.

	United States	Export
Trio [®] only		
For the three months ended March 31, 2015	94%	6%
For the three months ended March 31, 2014	91%	9%

Average Net Realized Sales Price

Our average net realized sales price for potash increased by \$14 per ton in the first quarter of 2015, to \$362 per ton, compared to the fourth quarter of 2014, largely as a result of price increases implemented during 2014 as domestic demand exceeded supply. Domestically, the potash market is influenced by global supply and demand, and is impacted by imports from our competitors as discussed above. As a result of strong demand, we experienced sequential increases in our potash average net realized sales price in each of the last four quarters.

Table of Contents

The table below demonstrates the progression of our average net realized sales price for potash and Trio[®] through 2014 and into 2015.

Average net realized sales price for the three months ended:	Potash (Per ton)	Trio [®]
March 31, 2015	\$362	\$367
December 31, 2014	\$348	\$354
September 30, 2014	\$336	\$351
June 30, 2014	\$329	\$350
March 31, 2014	\$317	\$340

Specific Factors Affecting Our Results

Sales

Our gross sales are derived from the sales of potash and Trio[®] and are determined by the quantities of product we sell and the sales prices we realize. We quote prices to customers both on a delivered basis and on the basis of pick-up at our plants and warehouses. Freight costs are incurred on only a portion of our sales as many of our customers arrange and pay for their own freight directly. When we arrange and pay for freight, our quotes and billings are based on expected freight costs to the points of delivery. Although our gross sales include the freight that we bill, we do not believe that gross sales provide a representative measure of our performance in the market due to variations caused by ongoing changes in the proportion of customers paying for their own freight, the geographic distribution of our products, and freight rates. Rail freight rates have been steadily increasing, thereby negatively influencing our net realized sales prices. We view net sales, which are gross sales less freight costs, as the key performance indicator of our revenue as it conveys the net sales price of the product that we realize. We manage our sales and marketing operations centrally and we work to achieve the highest average net realized sales price we can by evaluating the product needs of our customers and associated logistics and then determining which of our production facilities can best satisfy these needs.

The volume of product we sell is determined by demand for our products and by our production capabilities. We intend to operate our facilities at full production levels, which provide the greatest operating efficiencies. By having adequate warehouse capacity, we can maintain production levels during periods of fluctuating product demand and have product inventory positioned closer to the fields in order to meet peak periods of fertilizer demand.

Cost of Goods Sold

Our cost of goods sold reflects the costs to produce our potash and Trio[®] products, less credits generated from the sale of our by-products. Many of our production costs are largely fixed and, consequently, our costs of sales per ton on a facility-by-facility basis tend to move inversely with the number of tons we produce, within the context of normal production levels. We expect to experience variability in our cost of goods sold due to fluctuations in the relative mix of product that we produce through conventional mining as compared to solar solution mining. Our cost of goods sold per ton for our solar solution facilities is less than our cost of goods sold per ton for our conventional facilities.

However, our solar solution production is impacted by weather variability. Our principal production costs include labor and employee benefits, maintenance materials, contract labor, and materials for operating or maintenance projects, natural gas, electricity, operating supplies, chemicals, depreciation and depletion, royalties, and leasing costs. There are elements of our cost structure associated with contract labor, consumable operating supplies, and reagents and royalties that are variable, which make up a smaller component of our cost base. Our periodic production costs and costs of goods sold will not necessarily match one another from period-to-period based on the fluctuation of inventory, sales, and production levels at our facilities.

Our production costs per ton are also impacted when our production levels change, due to factors such as changes in the grade of ore delivered to the plant, levels of mine development, plant operating performance, downtime, and annual maintenance turnarounds. We expect that our labor and contract labor costs in Carlsbad, New Mexico, will continue to be influenced most directly by the demand for labor in the local Carlsbad, New Mexico, region where we compete for labor with the potash, oil and gas, and nuclear waste storage industries. Additionally, the East mine has a complex mineralogy with a mixed ore body comprised of potash and langbeinite. This complex ore is processed

through a singular product flow at the surface facility. The specific grade, volume, and characterization of the ore that is mined at any particular time is subject to fluctuations due to the nature of the mineral deposits and influences the amount of tons of potash and langbeinite ultimately produced from the facility, which affects our production costs per ton for both products and affects our quarter-to-quarter results.

Table of Contents

We pay royalties to federal, state, and private lessors under our mineral leases. These payments typically equal a percentage of net sales of minerals extracted and sold under the applicable lease. In some cases, federal royalties for potash are paid on a sliding scale that varies with the grade of ore extracted. For the three months ended March 31, 2015, and 2014, our average royalty rate was 4.2% and 3.6%, respectively.

Income Taxes

We are a subchapter C corporation and, therefore, are subject to federal and state income taxes on our taxable income. Our effective tax rate for the three months ended March 31, 2015 and 2014 was 32.0% and (88.7)%, respectively. Our effective income tax rates are impacted primarily by changes in the underlying tax rates in jurisdictions in which we are subject to income tax and permanent differences between book and tax income for the period, including the benefit associated with the estimated effect of the depletion and research and development credits. During the three months ended March 31, 2015, our effective tax rate was impacted primarily as a result of the benefit from estimated depletion deductions.

Our federal and state income tax returns are subject to examination by federal and state tax authorities.

During the three months ended March 31, 2015 and 2014, we recognized income tax expense of \$3.1 million, and an income tax benefit of \$2.8 million, respectively. Total tax expense for the three months ended March 31, 2015, was comprised of \$0.1 million of current income tax expense and \$3.0 million of deferred income tax expense. The total tax benefit for the quarter ended March 31, 2014, was comprised of a \$2.8 million deferred tax benefit.

We evaluate our deferred tax assets and liabilities each reporting period using the enacted tax rates expected to apply to taxable income in the periods in which the deferred tax liability or asset is expected to be settled or realized. The estimated statutory income tax rates that are applied to our current and deferred income tax calculations are impacted most significantly by the states in which we do business. Changing business conditions for normal business transactions and operations as well as changes to state tax rate and apportionment laws potentially alter our apportionment of income among the states for income tax purposes. These changes in apportionment laws result in changes in the calculation of our current and deferred income taxes, including the valuation of our deferred tax assets and liabilities. The effects of any such changes are recorded in the period of the adjustment. These adjustments can increase or decrease the net deferred tax asset on the balance sheet and impact the corresponding deferred tax benefit or deferred tax expense on the income statement.

Results of Operations for the Three Months Ended March 31, 2015, and 2014**Net Sales**

Net sales of potash increased to \$83.5 million for the three months ended March 31, 2015, from \$76.8 million for the three months ended March 31, 2014. This increase in net sales of potash was primarily the result of an increase of \$45 per ton in the average net realized sales price, partially offset by a 5% decrease in sales volume. During the first quarter of 2014, we experienced strong potash sales activity as uncertainty around price in late 2013 was diminished in advance of the spring application season.

Net sales of Trio[®] increased to \$22.6 million for the three months ended March 31, 2015, from \$12.1 million for the three months ended March 31, 2014, due to a 72% increase in the volume of sales coupled with an 8% increase in the average net realized sales price. Demand for granular-sized and premium-sized Trio[®] continues to exceed supply. We have also increased sales volumes of standard-sized Trio[®] in the domestic agricultural market.

Cost of Goods Sold

The following table presents our cost of goods sold for potash and Trio[®] for the subject periods:

	Three Months Ended March 31,		Change Between		
	2015	2014	Periods	% Change	
Cost of goods sold (in millions)	\$83.3	\$78.6	\$4.7	6	%
Cost per ton of potash sold ⁽¹⁾	\$292	\$280	\$12	4	%
Cost per ton of Trio [®] sold ⁽²⁾	\$257	\$301	\$(44)	(15))%

(1) Depreciation and depletion expense for potash was \$18.1 million and \$15.6 million in the first quarter of 2015 and 2014, respectively, which equates to \$79 and \$64 on a per-ton basis.

(2) Depreciation and depletion expense for Trio[®] was \$3.5 million and \$2.4 million in the first quarter of 2015 and 2014, respectively, which equates to \$58 and \$68 on a per-ton basis.

Table of Contents

Total per ton cost of goods sold of potash, which includes royalties and depreciation, depletion and amortization, increased as we experienced higher cash operating costs and lower production for the first quarter of 2015 from our conventional facilities. We recorded lower-of-cost-or-market inventory adjustments during the first quarter of 2015 of \$0.4 million, primarily the result of lower production from the conventional facilities as described above, resulting in our production costs being allocated over fewer tons.

Total per ton cost of goods sold of Trio[®] decreased as a result of higher production levels, mostly due to our intentional focus on increasing our efficiency in producing more premium-sized Trio[®]. As a result of the progress we have made in the pelletization process, we had more tons of langbeinite over which production costs were allocated, which resulted in lower per-ton costs.

Our total cost of goods sold increased primarily due to more tons of Trio[®] sold in the first quarter of 2015. Our potash production costs increased due to higher labor costs, electricity, property taxes and depreciation associated with our production facilities.

On a comparative basis, and within our potash and Trio[®] cost of goods sold, depreciation and depletion increased \$3.6 million, or 21%, during the first quarter of 2015 as a result of capital investments being placed into service over the last year. These capital projects included investments related to recovery improvement at our conventional facilities. We manage capital investments by evaluating capital projects that we believe are necessary to maintain the productivity of our mines and evaluating investment capital that is designed to increase production and generate incremental returns on invested capital.

Lower-of-Cost-or-Market Adjustment

During the three months ended March 31, 2015 and 2014, we recorded charges of approximately \$0.4 million and \$3.6 million, respectively, as a result of routine assessments of the lower of weighted average cost or estimated net realizable value on our finished goods product inventory. The approximate \$0.4 million of lower-of-cost-or-market adjustment recorded during the three months ended March 31, 2015, related to our granular inventories at our conventional facilities. Of the approximate \$3.6 million lower-of-cost-or-market adjustment recorded during the three months ended March 31, 2014, \$3.0 million related to the start-up activities of our HB mine, and \$0.6 million related to our inventories at our conventional facilities.

Selling and Administrative Expense

Selling and administrative expenses increased \$0.8 million, or 12%, to \$7.5 million for the three months ended March 31, 2015 from \$6.7 million for the three months ended March 31, 2014. The increase was primarily driven by increases in outside legal and professional fees related primarily to one on-going issue.

Restructuring Expense

In January 2014, in response to lower potash prices and the substantial completion of our major capital projects, we undertook a number of cost saving actions that were intended to better align our cost structure with our then-current business environment. These initiatives included the elimination of approximately 7% of our workforce, including capital project related support associated with our major capital projects, reduction in the use of outside professionals, and cutbacks in other general and administrative areas.

Other Operating Income

In the third quarter of 2013, our application for certain New Mexico employment-related tax credits was denied, and we recorded an additional allowance of approximately \$2.8 million related to the denied tax credits. In March 2014, we received notice that the State of New Mexico had approved \$5.9 million of employment tax credits, a significant portion of which had previously been denied. Accordingly, in the first quarter of 2014, we reversed \$2.9 million of the allowance associated with the previously recorded employment-related tax payments. We received payment of the \$5.9 million for the approved credits in the second quarter of 2014.

Capital Investments

We are taking actions to expand our potash production through the optimization of our current facilities and through expanding our solar solution production. We are also taking actions to increase our Trio[®] production by developing our significant langbeinite reserves, optimizing our recovery techniques and maximizing the amount of premium-sized product we manufacture.

We expect our level of capital investment to be approximately \$40 million to \$50 million for 2015, the majority of which we expect to be sustaining capital. Our 2015 operating plans and capital programs are being funded out of operating

Table of Contents

cash flows and existing cash and investments. As described below, we may also use our revolving credit facility or new debt issuances, to fund capital investments.

During the first quarter of 2015, we paid cash of \$8.7 million for capital projects.

Liquidity and Capital Resources

As of March 31, 2015, we had cash, cash equivalents, and investments of \$112.6 million. We also have an unsecured revolving credit facility that provides credit of up to \$250 million, provided that we meet specified financial covenants, as described below under the heading "Unsecured Credit Facility." As of March 31, 2015, the full amount of this facility was available to us and we had no borrowings outstanding under this facility.

The \$112.6 million of cash, cash equivalents and investments at March 31, 2015, was made up of the following:

\$24.2 million in cash;

\$42.6 million in cash equivalent investments, consisting of money market accounts with banking institutions that we believe are financially sound; and

\$34.3 million and \$11.5 million invested in short and long-term investments, respectively.

Our operations have been and are expected to be primarily funded from cash on hand and cash generated by operations and, if necessary, we have the ability to borrow under our unsecured credit facility. We will continue to monitor our future sources and uses of cash, and anticipate that we will make adjustments to our capital allocation strategies when, and if determined by our Board of Directors. We may use our revolving credit facility or new debt issuances as a source of liquidity for operating activities and to give us additional flexibility to finance, among other things, our capital investments, possible repayments of debt, dividends or stock repurchases.

The following summarizes our cash flow activity for the three months ended March 31, 2015, and 2014:

	Three Months Ended March 31,	
	2015	2014
	(In thousands)	
Cash flows provided by operating activities	\$32,674	\$17,324
Cash flows used in investing activities	\$(32,440)	\$(13,873)
Cash flows used in financing activities	\$(1,037)	\$(611)

Operating Activities

Total cash provided by operating activities through March 31, 2015, was \$32.7 million, an increase of \$15.4 million compared with the first three months of 2014. Our potash sales volumes approximated our production volumes in the first quarter of 2015, whereas our Trio[®] sales volumes exceeded our production volumes.

Investing Activities

Total cash used in investing activities increased by \$18.6 million in the first three months of 2015 compared with the same three month period in 2014 as a result of increased investment purchases, partially offset by lower capital investment activity and decreased proceeds from the sale of investments.

Financing Activities

Total cash used in financing activities of \$1.0 million was due to employee tax withholding for the vesting of restricted stock.

Unsecured Credit Facility

We have an unsecured credit facility, led by U.S. Bank, as administrative agent, and Wells Fargo Bank, as syndication agent. This unsecured credit facility provides a revolving credit facility of up to \$250 million. The actual amount available to us may be limited by our leverage ratio, which may not exceed 3.5, and our fixed charge coverage ratio, which may not be below 1.3.

Under the facility, the leverage ratio is defined as the ratio of our total funded indebtedness to adjusted EBITDA (earnings before interest, income taxes, depreciation, amortization, and certain other expenses, as defined in the credit

Table of Contents

facility) for the prior four fiscal quarters. The fixed charge coverage ratio is defined as the ratio of adjusted EBITDA for the prior four fiscal quarters to fixed charges. Both ratios may operate to limit the total amount available to us under the facility. If adjusted EBITDA were to decrease below current levels with no change to indebtedness, our leverage ratio could rise to the level where less than \$250 million would be available to us. As of March 31, 2015, the full amount of the facility was available to us. We believe that the amounts available to us will be adequate to fund our operations and our capital investment projects.

Outstanding balances under the unsecured credit facility bear interest at a floating rate, which, at our option, is either (1) the London Interbank Offered Rate (LIBOR), plus a margin of between 1.125% and 2.25%, depending upon our leverage ratio, as defined above; or (2) an alternative base rate, plus a margin of between 0.125% and 1.25%, depending upon our leverage ratio. We pay a quarterly commitment fee on the outstanding portion of the unused revolving unsecured credit facility amount of between 0.15% and 0.35%, depending on our leverage ratio. The interest rate paid under our unsecured credit facility on any debt varies both with changes in the LIBOR and with our leverage ratio.

The facility is unsecured and is guaranteed by our material subsidiaries. We are currently in compliance with the covenants under the facility. The facility has a maturity date of August 2018. As of March 31, 2015 there were no amounts outstanding under the facility. We occasionally borrow and repay amounts under the facility for near-term working capital needs and may do so in the future.

Unsecured Senior Notes

In April 2013, we received net proceeds of \$149.3 million from the issuance of \$150 million aggregate principal amount of the Notes pursuant to a note purchase agreement entered into in August 2012. The Notes consist of the following series:

\$60 million of 3.23% Senior Notes, Series A, due April 16, 2020

\$45 million of 4.13% Senior Notes, Series B, due April 14, 2023

\$45 million of 4.28% Senior Notes, Series C, due April 16, 2025

The Notes are senior unsecured obligations and rank equally in right of payment with any of our other unsubordinated unsecured indebtedness. The obligations under the Notes are unconditionally guaranteed by our material subsidiaries. The note purchase agreement includes financial covenants requiring a minimum fixed charge ratio and a maximum leverage ratio. We are currently in compliance with the covenants under the Notes. Interest on the Notes is paid semiannually on April 16 and October 16 of each year.

Off-Balance Sheet Arrangements

As of March 31, 2015, we had no off-balance sheet arrangements aside from the operating leases and bonding obligations described in the accompanying notes to the condensed consolidated financial statements.

Critical Accounting Policies and Estimates

Our Annual Report on Form 10-K for the year ended December 31, 2014, describes the critical accounting policies that affect our more significant judgments and estimates used in the preparation of our consolidated financial statements. There have been no significant changes to our critical accounting policies since December 31, 2014.

Non-GAAP Financial Measures

To supplement our consolidated financial statements, which are prepared and presented in accordance with GAAP, we use several non-GAAP financial measures to monitor and evaluate our performance. These non-GAAP financial measures include net sales, average net realized sales price, cash operating costs and average potash and Trio[®] gross margin. These non-GAAP financial measures should not be considered in isolation or as a substitute for, or superior to, the financial information prepared and presented in accordance with GAAP. In addition, because the presentation of these non-GAAP financial measures varies among companies, our non-GAAP financial measures may not be comparable to similarly titled measures used by other companies.

We believe these non-GAAP financial measures provide useful information to investors for analysis of our business. We also refer to these non-GAAP financial measures in assessing our performance and when planning, forecasting

and analyzing future periods. We believe these non-GAAP financial measures are widely used by professional research analysts and others in the valuation, comparison and investment recommendations of companies in the potash mining industry. Many investors use the published research reports of these professional research analysts and others in making investment decisions.

Table of Contents

Below is additional information about our non-GAAP financial measures, including reconciliations of these non-GAAP financial measures to the most directly comparable GAAP measures, for the three months ended March 31, 2015, and 2014.

Net Sales and Average Net Realized Sales Price per Ton

Net sales and average net realized sales price are non-GAAP financial measures. Net sales are calculated as sales less freight costs. Average net realized sales price is calculated as net sales, divided by the number of tons sold in the period. We consider net sales and average net realized sales price to be useful because they remove the effect of transportation and delivery costs on sales and pricing. When we arrange transportation and delivery for a customer, we include in revenue and in freight costs the costs associated with transportation and delivery. However, many of our customers arrange for and pay their own transportation and delivery costs, in which case these costs are not included in our revenue and freight costs. We use net sales and average net realized sales price as key performance indicators to analyze sales and price trends.

	Three Months Ended March 31,					
	2015			2014		
	Potash	Trio [®]	Total	Potash	Trio [®]	Total
Sales	\$90,729	\$26,292	\$117,021	\$84,497	\$14,378	\$98,875
Freight costs	7,206	3,706	10,912	7,661	2,271	9,932
Net sales	\$83,523	\$22,586	\$106,109	\$76,836	\$12,107	\$88,943
Divided by:						
Tons sold (in thousands)	231	62		242	36	
Average net realized sales price per ton	\$362	\$367		\$317	\$340	

Cash Operating Costs per Ton

Cash operating costs per ton is a non-GAAP financial measure that is calculated as total cost of goods sold divided by the number of tons sold in the period and then adjusted to exclude per-ton depreciation, depletion, and royalties. Total cost of goods sold is reported net of by-product credits and does not include warehousing and handling costs. We consider cash operating costs to be useful because it represents our core, per-ton costs to produce potash and Trio[®]. We use cash operating costs as an indicator of performance and operating efficiencies and as one of the measures under our performance-based compensation programs for employees.

Table of Contents

	Three Months Ended March 31,			2014		
	2015	Potash	Trio®	Total	Potash	Trio®
Cost of goods sold	\$ 67,454	\$ 15,828	\$ 83,282	\$ 67,859	\$ 10,714	\$ 78,573
Divided by sales volume (in thousands of tons)	231	62		242	36	
Cost of goods sold per ton	\$ 292	\$ 257		\$ 280	\$ 301	
Less per-ton adjustments						
Depreciation and depletion	\$ 79	\$ 58		\$ 64	\$ 68	
Royalties	14	18		11	17	
Cash operating costs per ton	\$ 199	\$ 181		\$ 205	\$ 216	

Average Potash and Trio® Gross Margin per Ton

Average potash and Trio® gross margin per ton are non-GAAP financial measures that are calculated by subtracting the sum of per ton total cost of goods sold and per ton warehousing and handling costs from the average net realized sales price. We believe these measures are useful because they represent the average margin we realize on each ton of potash and Trio® sold. The reconciliations of average potash and Trio® net realized sales price to GAAP sales are set forth separately above under the heading "Net Sales and Average Net Realized Sales Price per Ton."

	Three Months Ended March	
	31, 2015	2014
Potash		
Average potash net realized sales price	\$ 362	\$ 317
Less total potash cost of goods sold	292	280
Less potash warehousing and handling costs	13	10
Average potash gross margin per ton	\$ 57	\$ 27

	Three Months Ended March	
	31, 2015	2014
Trio®		
Average Trio® net realized sales price*	\$ 367	\$ 340
Less total Trio® cost of goods sold	257	301
Less Trio® warehousing and handling costs	12	10
Average Trio® gross margin per ton	\$ 98	\$ 29

* The reconciliations of average potash and Trio® net realized sales price to GAAP sales are set forth above.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Part II, Item 7A., "Quantitative and Qualitative Disclosure About Market Risk," of our Annual Report on Form 10-K for the year ended December 31, 2014, describes our exposure to market risk. There have been no significant changes to our market risk exposure since December 31, 2014.

ITEM 4. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

Table of Contents

We maintain “disclosure controls and procedures,” as defined in Rule 13a-15(e) and 15d-15(e) under the Exchange Act. Our disclosure controls and procedures are designed to ensure that information required to be disclosed by us in reports that we file or submit under the Exchange Act is recorded, processed, summarized, and reported within the time periods specified in Securities and Exchange Commission rules and forms. Our disclosure controls and procedures are also designed to ensure that this information is accumulated and communicated to our management, including our principal executive officer and principal financial officer, as appropriate, to allow timely decisions regarding required disclosure. Based on their evaluation as of March 31, 2015, our principal executive officer and principal financial officer have concluded that our disclosure controls and procedures were effective at the reasonable assurance level.

Changes in Internal Control over Financial Reporting

Our management, including our principal executive officer and principal financial officer, conducted an evaluation of our “internal control over financial reporting,” as defined in Rule 13a-15(f) of the Exchange Act to determine whether any changes in our internal control over financial reporting occurred during the three months ended March 31, 2015, that materially affected, or are reasonably likely to materially affect, our internal control over financial reporting. Based on that evaluation, there were no changes in our internal control over financial reporting that occurred during the three months ended March 31, 2015, that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Inherent Limitations on Effectiveness of Controls

Our management, including our principal executive officer and principal financial officer, do not expect that our disclosure controls or our internal control over financial reporting will prevent all errors and all fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within Intrepid have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur because of a simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the controls. The design of any system of controls also is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Over time, controls may become inadequate because of changes in conditions, or the degree of compliance with policies or procedures may deteriorate. Because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected.

PART II-OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

We are subject to claims and legal actions in the ordinary course of business. While there are uncertainties in predicting the outcome of any claim or legal action, we believe that the ultimate resolution of these claims or actions is not reasonably likely to have a material adverse effect on our financial condition, results of operations or cash flows. We maintain liability insurance that will apply to some claims and actions and believe that our coverage is reasonable in view of the insurable legal risks to which our business ordinarily is subject.

ITEM 1A. RISK FACTORS

Our future performance is subject to a variety of risks and uncertainties that could materially and adversely affect our business, financial condition, and results of operations, and the trading price of our common stock. These risks and uncertainties are described in Part I, "Item 1A: Risk Factors" in our Annual Report on Form 10-K for the year ended December 31, 2014. There have been no material changes to these risks and uncertainties.

(1) Represents shares of common stock delivered to us as payment of withholding taxes due upon the vesting of restricted stock held by our employees.

ITEM 3. DEFAULTS UPON SENIOR SECURITIES

None.

ITEM 4. MINE SAFETY DISCLOSURES

We are committed to providing a safe and healthy work environment. The objectives of our safety programs are to eliminate workplace accidents and incidents, to preserve employee health, and to comply with safety- and health-based regulations. We seek to achieve these objectives by training employees in safe work practices; establishing, following, and improving safety standards; involving employees in safety processes; openly communicating with employees about safety matters; and recording, reporting, and investigating accidents, incidents, and losses to avoid recurrence. As part of our ongoing safety programs, we collaborate with regulators to identify and implement new accident prevention techniques and practices.

Our East, West and North facilities in New Mexico are subject to regulation by the Mine Safety and Health Administration ("MSHA") under the Federal Mine Safety and Health Act of 1977 (the "Mine Act") and the New Mexico Bureau of Mine Safety. MSHA inspects these facilities on a regular basis and issues various citations and orders when it believes a violation has occurred under the Mine Act. Exhibit 95.1 to this Quarterly Report on Form 10-Q provides the information concerning mine safety violations and other regulatory matters required by Section 1503(a) of the Dodd-Frank Wall Street Reform and Consumer Protection Act and Item 104 of Regulation S-K. Our Utah facilities and our HB Solar Solution mine are subject to regulation by the Occupational Health and Safety Administration and, therefore, are not required to be included in the information provided in Exhibit 95.1.

ITEM 5. OTHER INFORMATION

None.

ITEM 6. EXHIBITS

The list of exhibits in the Exhibit Index to this Quarterly Report on Form 10-Q is incorporated herein by reference.
