**Form 10-K
Annual Report Pursuant to Section 13 or 15(d) of
The Securities Exchange Act of 1934**

For the fiscal year ended December 31, 2006

Commission file number 0-16093

CONMED CORPORATION
(Exact name of registrant as specified in its charter)

New York
(State or other jurisdiction of
incorporation or organization)

16-0977505
(I.R.S. Employer
Identification No.)

525 French Road, Utica, New York
(Address of principal executive offices)

13502
(Zip Code)

(315) 797-8375
Registrant's telephone number, including area code

Securities registered pursuant to Section 12(g) of the Act:
Common Stock, \$.01 par value per share
(Title of class)

Indicate by check mark if the registrant is a well-known seasoned issuer (as defined in Rule 405 of the Securities Act).
Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Exchange Act.
Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.
Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Edgar Filing: CONMED CORP - Form 10-K

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act (Check one).

Large accelerated filer

Accelerated filer

Non-accelerated filer

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).
Yes No

As of June 30, 2006, the last business day of the registrant's most recently completed second fiscal quarter, the aggregate market value of the shares of voting common stock held by non-affiliates of the registrant was approximately \$577,062,449 based upon the closing price of the Company's common stock on the NASDAQ Stock Market.

The number of shares of the registrant's \$0.01 par value common stock outstanding as of February 20, 2007 was 28,025,644.

DOCUMENTS INCORPORATED BY REFERENCE:

Portions of the Definitive Proxy Statement or other informational filing for the 2007 Annual Meeting of Shareholders are incorporated by reference into Part III of this report.

Forward Looking Statements

This Annual Report on Form 10-K for the Fiscal Year Ended December 31, 2006 (“Form 10-K”) contains certain forward-looking statements (as such term is defined in the Private Securities Litigation Reform Act of 1995) and information relating to CONMED Corporation (“CONMED”, the “Company”, “we” or “us” — references to “CONMED”, the “Company”, “we” or “us” shall be deemed to include our direct and indirect subsidiaries unless the context otherwise requires) which are based on the beliefs of our management, as well as assumptions made by and information currently available to our management.

When used in this Form 10-K, the words “estimate,” “project,” “believe,” “anticipate,” “intend,” “expect” and similar expressions are intended to identify forward-looking statements. These statements involve known and unknown risks, uncertainties and other factors, including those identified under the caption “Item 1A — Risk Factors” and elsewhere in this Form 10-K which may cause our actual results, performance or achievements, or industry results, to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Such factors include, among others, the following:

- general economic and business conditions;*
- cyclical customer purchasing patterns due to budgetary and other constraints;*
- changes in customer preferences;*
- competition;*
- changes in technology;*
- the introduction and acceptance of new products;*
- the ability to evaluate, finance and integrate acquired businesses, products and companies;*
- changes in business strategy;*
- the availability and cost of materials;*
- the possibility that United States or foreign regulatory and/or administrative agencies may initiate enforcement actions against us or our distributors;*
- future levels of indebtedness and capital spending;*
- changes in foreign exchange and interest rates;*
- quality of our management and business abilities and the judgment of our personnel;*
- the availability, terms and deployment of capital;*
- the risk of litigation, especially patent litigation as well as the cost associated with patent and other litigation;*
- changes in regulatory requirements; and*
- various other factors referenced in this Form 10-K.*

See “Item 7-Management’s Discussion and Analysis of Financial Condition and Results of Operations”, “Item 1-Business” and “Item 1A-Risk Factors” for a further discussion of these factors. You are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date hereof. We do not undertake any obligation to publicly release any revisions to these forward-looking statements to reflect events or circumstances after the date of this Form 10-K or to reflect the occurrence of unanticipated events.

Table of Contents

General

CONMED Corporation was incorporated under the laws of the State of New York in 1970 by Eugene R. Corasanti, the Company's founder and Chairman of the Board. CONMED is a medical technology company with an emphasis on surgical devices and equipment for minimally invasive procedures and monitoring. The Company's products serve the clinical areas of arthroscopy, powered surgical instruments, electrosurgery, cardiac monitoring disposables, endosurgery and endoscopic technologies. They are used by surgeons and physicians in a variety of specialties including orthopedics, general surgery, gynecology, neurosurgery, and gastroenterology. Headquartered in Utica, New York, the Company's 3,200 employees distribute its products worldwide from ten manufacturing locations. See Note 9 to the Consolidated Financial Statements for further discussion of our principal operating units.

We have historically used strategic business acquisitions and exclusive distribution relationships to diversify our product offerings, increase our market share in certain product lines, realize economies of scale and take advantage of growth opportunities in the healthcare field. During the last five years, we have completed a number of acquisitions. These acquisitions, complemented by internal growth, have resulted in a compound annual growth rate in net sales during that period of approximately 7%.

We are committed to offering products with the highest standards of quality, technological excellence and customer service. Substantially all of our facilities have attained certification under the ISO international quality standards and other domestic and international quality accreditations.

Our annual report on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to those reports are accessible free of charge through the Investor Relations section of our website (<http://www.conmed.com>) as soon as practicable after such material has been electronically filed with, or furnished to, the United States Securities and Exchange Commission.

Industry

Market growth for our products is primarily driven by:

- **Favorable Demographics.** The number of surgical procedures performed is increasing and we believe the long term demographic trend will be continued growth in surgical procedures as a result of the aging of the population, and technological advancements, which result in safer and less invasive (or non-invasive) surgical procedures. Additionally, as people are living longer, more active lives, they are engaging in contact sports and activities such as running, skiing, rollerblading, golf and tennis which result in injuries with greater frequency and at an earlier age than ever before. Sales of surgical products aggregated approximately 90% of our total net revenues in 2006. See "Products."
- **Continued Pressure to Reduce Health Care Costs.** In response to rising health care costs, managed care companies and other third-party payers have placed pressures on health care providers to reduce costs. As a result, health care providers have focused on the high cost areas such as surgery. To reduce costs, health care providers use minimally invasive techniques, which generally reduce patient trauma, recovery time and ultimately the length of hospitalization. Approximately 50% of our

Table of Contents

products are designed for use in minimally invasive surgical procedures. See “Products.” Health care providers are also increasingly purchasing single-use, disposable products, which reduce the costs associated with sterilizing surgical instruments and products following surgery. The single-use nature of disposable products lowers the risk of incorrectly sterilized instruments spreading infection into the patient and increasing the cost of post-operative care. Approximately 75% of our sales are derived from single-use disposable products.

In the United States, the pressure on health care providers to contain costs has caused many health care providers to enter into comprehensive purchasing contracts with fewer suppliers, which offer a broader array of products at lower prices. In addition, many health care providers have aligned themselves with Group Purchasing Organizations (“GPOs”) or Integrated Health Networks (“IHNs”), whose stated purpose is to aggregate the purchasing volume of their members in order to negotiate competitive pricing with suppliers, including manufacturers of surgical products. We believe that these trends will favor entities which offer a diverse product portfolio. See “—Business Strategy”.

- **Increased Global Medical Spending.** We believe that foreign markets offer significant growth opportunities for our products. We currently distribute our products through our own sales subsidiaries or through local dealers in over 100 foreign countries.

Competitive Strengths

Management believes that we hold a significant market share position in each of our key product areas including, Arthroscopy, Powered Surgical Instruments, Electrosurgery, Patient Care, Endosurgery and Endoscopic Technologies. We have established a leadership position in the marketplace by capitalizing on the following competitive strengths:

- **Brand Recognition.** Our products are marketed under leading brand names, including CONMED®, CONMED Linvatec® and Hall Surgical®. These brand names are recognized by physicians and healthcare professionals for quality and service. It is our belief that brand recognition facilitates increased demand for our products in the marketplace, enables us to build upon the brand’s associated reputation for quality and service, and realize increased market acceptance of new branded products.
- **Breadth of Product Offering.** The breadth of our product lines in our key product areas enables us to meet a wide range of customer requirements and preferences. This has enhanced our ability to market our products to surgeons, hospitals, surgery centers, GPOs, IHNs and other customers, particularly as institutions seek to reduce costs and minimize the number of suppliers.
- **Successful Integration of Acquisitions.** We seek to build growth platforms around our core markets through focused acquisitions of complementary businesses and product lines. During the last five years we have completed a number of acquisitions. These acquisitions have enabled us to diversify our product portfolio, expand our sales and marketing capabilities and strengthen our presence in key geographical markets.

Table of Contents

•**Strategic Marketing and Distribution Channels.** We market our products domestically through five focused sales force groups consisting of approximately 180 employee sales representatives and 210 sales professionals employed by independent sales agent groups. Each of our dedicated sales professionals are highly knowledgeable in the applications and procedures for the products they sell. Our sales representatives foster close professional relationships with physicians, surgeons, hospitals, outpatient surgery centers and physicians' offices. Additionally, we maintain a global presence through sales subsidiaries and branches located in key international markets. We directly service hospital customers located in these markets through an employee-based international sales force of approximately 170 sales representatives. We also maintain distributor relationships domestically and in numerous countries worldwide. See “—Marketing.”

•**Operational Improvements and Manufacturing.** We are focused on continuously improving our supply chain effectiveness, strengthening our manufacturing processes and optimizing our plant network to increase operational efficiencies within the organization. Substantially all of our products are manufactured and assembled from components we produce. Our strategy has historically been to vertically integrate our manufacturing facilities in order to develop competitive advantage. This integration provides us with cost efficient and flexible manufacturing operations which permit us to allocate capital more efficiently. Additionally, we attempt to exploit commercial synergies between operations, such as the procurement of common raw materials and components used in production.

•**Technological Leadership.** Research and development efforts are closely aligned with our key business objectives, namely developing and improving products and processes, applying innovative technology to the manufacture of products for new global markets and reducing the cost of producing core products. These efforts are evidenced by recent product introductions, including the following: IM 4000 High Definition Camera System; 24K Irrigation System; Hip Arthroscopy Kit; and Hi-Fi Suture Cutter.

Business Strategy

Our principal objectives are to improve the quality of surgical outcomes and patient care through the development of innovative medical devices, refinement of existing products and development of new technologies which reduce risk, trauma, cost and procedure time. We believe that by meeting these objectives we will enhance our ability to anticipate and adapt to customer needs and market opportunities, and provide shareholders with superior investment returns. We intend to achieve future growth and earnings development through the following initiatives:

•**Introduction of New Products and Product Enhancements.** We continually pursue organic growth through the development of new products and enhancements to existing products. We seek to develop new technologies which improve the durability, performance and usability of existing products. In addition to our internal research and development efforts, we receive new ideas for products and technologies, particularly in procedure-specific areas, from surgeons, inventors and other healthcare professionals.

Table of Contents

- **Pursue Strategic Acquisitions.** We pursue strategic acquisitions in existing and new growth markets to achieve increased operating efficiencies, geographic diversification and market penetration. Targeted companies have historically included those with proven technologies and established brand names which provide potential sales, marketing and manufacturing synergies.
- **Realize Manufacturing and Operating Efficiencies.** We continually review our production systems for opportunities to reduce operating costs, consolidate product lines or identical process flows, reduce inventory requirements and optimize existing processes. Our vertically integrated manufacturing facilities allow for further opportunities to reduce overhead, increase operating efficiencies and capacity utilization.
- **Geographic Diversification.** We believe that significant growth opportunities exist for our surgical products outside the United States. Principal foreign markets for our products include Europe, Latin America and Asia/Pacific Rim. Critical elements of our future sales growth in these markets include leveraging our existing relationships with foreign surgeons, hospitals, third-party payers and foreign distributors, maintaining an appropriate presence in emerging market countries and continually evaluating our routes-to-market.
- **Active Participation In The Medical Community.** We believe that excellent working relationships with physicians and others in the medical industry enable us to gain an understanding of new therapeutic and diagnostic alternatives, trends and emerging opportunities. Active participation allows us to quickly respond to the changing needs of physicians and patients.

Products

The following table sets forth the percentage of net sales for each of our product lines during each of the three years ended December 31:

| | Year Ended December 31, | | |
|------------------------------|--------------------------------|-------------|-------------|
| | 2004 | 2005 | 2006 |
| Arthroscopy | 37% | 34% | 35% |
| Powered Surgical Instruments | 23 | 22 | 21 |
| Electrosurgery | 15 | 14 | 15 |
| Patient Care | 14 | 12 | 12 |
| Endosurgery | 8 | 8 | 8 |
| Endoscopic Technologies | 3 | 10 | 9 |
| Total | 100% | 100% | 100% |
| Net Sales (in thousands) | \$ 558,388 | \$ 617,305 | \$ 646,812 |

Arthroscopy

We offer a comprehensive range of devices and products for use in arthroscopic surgery. Arthroscopy refers to diagnostic and therapeutic surgical procedures performed on joints with the use of minimally invasive arthroscopes and related instruments. Minimally invasive arthroscopic procedures enable surgical repairs to be completed with less trauma to the patient, resulting in shorter

Table of Contents

recovery times and cost savings. Arthroscopic procedures are performed on the knee and shoulder, and smaller joints, such as the wrist and ankle.

Our arthroscopy products include powered resection instruments, arthroscopes, reconstructive systems, tissue repair sets, metal and bioabsorbable implants and related disposable products and fluid management systems. We also offer a line of video and imaging products suitable for use in multi-specialty clinical environments beyond arthroscopy, including laparoscopy, ENT, gynecology and urology as well as integrated operating room systems and equipment. It is our standard practice to transfer some of these products, such as shaver consoles and pumps, to certain customers at no charge. These capital “placements” allow for and accommodate the use of a variety of disposable products, such as shaver blades, burs and pump tubing. We have benefited from the introduction of new arthroscopic products and technologies, such as bioabsorbable screws, ablaters, “push-in” and “screw-in” suture anchors, resection shavers and cartilage repair implants.

A significant portion of arthroscopic procedures are performed to repair injuries which have occurred in the joint areas of the body. Many of these injuries are the result of sports related events or similar traumas. For this reason, arthroscopy is often referred to as “sports medicine.”

| Product | Arthroscopy Description | Brand Name |
|------------------------------|--|--|
| Ablators and Shaver Ablators | Electrosurgical ablaters and resection ablaters to resect and remove soft tissue and bone; used in knee, shoulder and small joint surgery. | Advantage® UltrAblator® Lightwave™ Trident® |
| Knee Reconstructive Systems | Products used in cruciate reconstructive surgery; includes instrumentation, screws, pins and ligament harvesting and preparation devices. | Paramax® Pinn-ACL® Grafix® Matryx™ Bioscrew® EndoPearl® XtraLok® |
| Soft Tissue Repair Systems | Instrument systems designed to attach specific torn or damaged soft tissue to bone or other soft tissue in the knee, shoulder and wrist; includes instrumentation, guides, hooks and suture devices. | Spectrum® Inteq® Shuttle Relay™ Blitz® Hi-Fi™ Suture Saver™ |
| Fluid Management Systems | Disposable tubing sets, disposable and reusable inflow devices, pumps and suction/waste management systems for use in arthroscopic and general surgeries. | Apex® Quick-Flow® Quick-Connect® 87K™ 10K® |

Table of Contents

| Product | Arthroscopy Description | Brand Name |
|---|--|--|
| Imaging | Surgical video systems for endoscopic procedures; includes autoclavable single and three-chip camera heads and consoles, endoscopes, light sources, monitors, VCRs and printers. | Apex® 8180 Series Envision™ IM3300 Quicklatch® Shock Flex™ |
| Implants | Products including bioabsorbable and metal screws, pins and suture anchors for attaching soft tissue to bone in the knee, shoulder and wrist as well as miniscal repair. | BioScrew™ Bio-Anchor® BioTwist® UltraFix® Revo® Super Revo® Bionx™ Meniscus Arrow™ Smart Nail® Smart Pin® Smart Screw® Smart Tack® The Wedge™ Biostinger® Hornet® ThRevo™ Duet™ Impact™ |
| Integrated operating room systems and equipment | Centralized operating room management and control systems, service arms and service managers. | CONMED® Nurse's Assistant® |
| Arthroscopic Shaver Systems | Electrically powered shaver handpieces that accommodate a large variety of shaver blade disposables specific to clinical specialty and technological precision. | Advantage® Turbo™ Gator® Great White® Mako™ Merlin® Sterling® |
| Other Instruments and Accessories | Forceps, graspers, punches, probes, sterilization cases and other general instruments for arthroscopic procedures. | Shutt® Concept® TractionTower® Clearflex™ SE™ |

Powered Surgical Instruments

Electric, battery or pneumatic powered surgical instruments are used to perform orthopedic, arthroscopic and other surgical procedures, such as cutting, drilling or reaming. Each instrument consists of one or more handpieces and

-8-

Table of Contents

related accessories as well as disposable and limited reusable items (e.g., burs, saw blades, drills and reamers). Powered instruments are categorized as either small bone, large bone or specialty powered instruments. Specialty powered instruments are utilized in procedures such as spinal surgery, neurosurgery, ENT, oral/maxillofacial surgery, and cardiothoracic surgery.

Our line of powered instruments is sold principally under the Hall® Surgical brand name, for use in large and small bone orthopedic, arthroscopic, oral/maxillofacial, podiatric, plastic, ENT, neurological, spinal and cardiothoracic surgeries. Large bone, neurosurgical, spinal and cardiothoracic powered instruments are sold primarily to hospitals while small bone arthroscopic, otolaryngological and oral/maxillofacial powered instruments are sold to hospitals, outpatient facilities and physicians' offices. Our CONMED Linvatec subsidiary has devoted significant resources in the development of new technologies for large bone, small bone, arthroscopic, neurosurgical, spine and otolaryngological instruments which may be easily adapted and modified for new procedures.

Our powered instruments product line also includes the PowerPro® Battery System. This full function orthopedic power system is specifically designed to meet the requirements of most orthopedic applications. The PowerPro® Battery System has a SureCharge™ option which allows the user to sterilize the battery before charging. This ensures that the battery will be fully charged when delivered to the operating room, unlike competitive battery systems currently available on the market. The PowerPro® uses a proprietary process for maintaining sterility during charging, thus avoiding the loss of battery charge during sterilization, which frequently occurs in competing battery systems.

| Product | Powered Surgical Instruments | Brand Name |
|---|--|--|
| | Description | |
| Large Bone | Powered saws, drills and related disposable accessories for use primarily in total knee and hip joint replacements and trauma surgical procedures. | Hall® Surgical MaxiDriver™ PowerPro® PowerProMax™ Advantage® SureCharge® MPower™ |
| Small Bone | Powered saws, drills and related disposable accessories for small bone and joint related surgical procedures. | Hall® Surgical MicroPower™ Advantage® Smart Guard® PowerProMax™ |
| Otolaryngology Neurosurgery Spine | Specialty powered saws, drills and related disposable accessories for use in neurosurgery, spine, and otolaryngologic procedures. | Hall® Surgical E9000® UltraPower® Hall Osteon® Hall Ototome® Coolflex® |

Table of Contents

| Powered Surgical Instruments | | |
|--------------------------------------|---|---|
| Product | Description | Brand Name |
| Cardiothoracic Oral/maxillofacial | Powered sternum saws, drills, and related disposable accessories for use by cardiothoracic and oral/maxillofacial surgeons. | Hall® Surgical E9000® UltraPower® Micro 100™ VersiPower® Plus |

Electrosurgery

Electrosurgery is a technique of using high-frequency electrical energy which, when applied to tissues through special instruments, may be used to cut or coagulate tissues. Radio frequency (“RF”) is the form of high-frequency electrical energy used in electrosurgery. An electrosurgical system consists of a generator, an active electrode in the form of an electrosurgical pencil used to apply concentrated energy from the generator to the target tissues and a ground pad which returns the energy safely to the generator. Electrosurgery is routinely used in most forms of surgery, including general, dermatologic, thoracic, orthopedic, urologic, neurosurgical, gynecological, laparoscopic, arthroscopic and endoscopic procedures.

Our electrosurgical products include electrosurgical pencils and active electrodes, ground pads, generators, the Argon-Beam Coagulation system (ABC®), and related disposable products. ABC® technology is a special method of electrosurgery, which produces a faster and more superficial coagulation of tissues as compared to conventional electrosurgery. Unlike conventional electrosurgery, the electrical energy travels through an ionized column of argon gas, allowing the energy to be applied to the bleeding tissues in a completely non-contact mode. Clinicians have reported notable benefits of ABC® over traditional electrosurgical coagulation in certain clinical situations, including open-heart, liver, oncology and trauma surgery.

| Electrosurgery | | |
|-----------------------|--|---|
| Product | Description | Brand Name |
| Pencils | Disposable and reusable surgical instruments designed to deliver high-frequency electrical energy to cut and/or coagulate tissue. | Hand-Trol® GoldLine™ ClearVac® |
| Ground Pads | Disposable ground pads which disperse electrosurgical energy and safely return it to the generator; available in adult, pediatric and infant sizes. | MacroLyte® ThermoGard® SureFit™ DiaTemp™ |
| Active Electrodes | Surgical accessory electrodes with and without the proprietary UltraClean™ coating which provides an easy to clean electrode surface during surgery. | UltraClean® |

Table of Contents

| Product | Electrosurgery Description | Brand Name |
|--------------------------------------|--|---|
| Generators | Monopolar and bipolar clinical energy sources for surgical procedures performed in a hospital, physicians' office or clinical setting. | System 5000™ System 2450™ Hyfrecator® 2000 |
| Argon Beam Coagulation Systems | Specialized electrosurgical generators, disposable hand pieces and ground pads for Argon Enhanced non-contact coagulation of tissues. | ABC® Beamer Plus® System 7550® ABC Flex® Bend-A-Beam® |

Patient Care

Our patient care product line offering includes a line of vital signs and cardiac monitoring products including pulse oximetry equipment & sensors, ECG electrodes and cables, cardiac defibrillation & pacing pads and blood pressure cuffs. We also offer a complete line of reusable surgical patient positioners and suction instruments & tubing for use in the operating room, as well as a line of IV products and hydrogel-based wound care dressings.

| Product | Patient Care Description | Brand Name |
|---|--|---------------------------------------|
| ECG Monitoring | Line of disposable electrodes, monitoring cables, lead wire products and accessories designed to transmit ECG signals from the heart to an ECG monitor or recorder. | CONMED® Ultratrace® Cleartrace® |
| Wound Care | Disposable transparent wound dressings comprising proprietary hydrogel; able to absorb 2½ times its weight in wound exudate. | ClearSite® Hydrogauze™ |
| Patient Positioners | Products which properly and safely position patients while in surgery. | Airsoft® |
| Surgical Suction Instruments and Tubing | Disposable surgical suction instruments and connecting tubing, including Yankauer, Poole, Frazier and Sigmoidoscopic instrumentation, for use by physicians in the majority of open surgical procedures. | CONMED® |
| Intravenous Therapy | Disposable IV drip rate gravity controller and disposable catheter stabilization dressing designed to hold and secure an IV needle or | VENI-GARD® MasterFlow® Stat 2® |

Edgar Filing: CONMED CORP - Form 10-K
catheter for use in IV therapy.

Table of Contents

| Product | Patient Care Description | Brand Name |
|------------------------------------|--|--|
| Defibrillator Pads and Accessories | Stimulation electrodes for use in emergency cardiac response and conduction studies of the heart. | PadPro® |
| Pulse Oximetry | Used in critical care to continuously monitor a patient's arterial blood oxygen saturation and pulse rate. | Dolphin® (a registered trademark of Dolphin Medical, Inc.) Pro2® |
| Non-invasive blood pressure cuff | Used in critical care to measure blood pressure. | SoftCheck® UltraCheck® (registered trademarks of CAS Medical Systems, Inc.) |

Endosurgery

Endosurgery (also referred to as minimally invasive surgery or laparoscopic surgery) is surgery performed without a major incision. This surgical specialty results in less trauma for the patient and produces important cost savings as a result of shorter recovery times and reduced hospitalization. Endoscopic surgery is performed on organs in the abdominal cavity such as the gallbladder, appendix and female reproductive organs. During such procedures, devices called “trocars” are used to puncture the abdominal wall and are then removed, leaving in place a trocar cannula. The trocar cannula provides access into the abdomen for camera systems and surgical instruments. Some of our endosurgical instruments are “reposable”, meaning that the instrument has a disposable and a reusable component.

Our Endosurgical products include the Reflex® and PermaClip™ clip applicators for vessel and duct ligation, Universal S/I™ (suction/irrigation) and Universal Plus™ laparoscopic instruments, specialized suction/irrigation electro-surgical instrument systems for use in laparoscopic surgery and the TroGard Finesse® which incorporates a blunt-tipped version of a trocar. The TroGard Finesse® dilates access through the body wall rather than cutting with the sharp, pointed tips of conventional trocars thus resulting in smaller wounds, and less bleeding. We also offer cutting trocars, suction/irrigation accessories, laparoscopic scissors, active electrodes, insufflation needles and linear cutters and staplers for use in laparoscopic surgery. Our disposable skin staplers are used to close large skin incisions with surgical staples, thus eliminating the time consuming suturing process.

Table of Contents

| Product | Endosurgery Description | Brand Name |
|---|--|---|
| Trocars | Disposable and reusable devices used to puncture the abdominal wall providing access to the abdominal cavity for camera systems and instruments. | TroGard Finesse® Reflex® Detach a Port® OnePort® CORE Dynamics® |
| Multi-functional Electrosurgery and Suction/Irrigation instruments | Instruments for cutting and coagulating tissue by delivering high-frequency current. Instruments which deliver irrigating fluid to the tissue and remove blood and fluids from the internal operating field. | Universal™ Universal Plus™ FloVac® |
| Clip Appliers | Disposable and reusable devices for ligating blood vessels and ducts by placing a titanium clip on the vessel. | Reflex® PermaClip™ |
| Laparoscopic Instruments | Scissors, graspers | DetachaTip® |
| Skin Staplers | Disposable devices which place surgical staples for closing a surgical incision. | Reflex® |
| Microlaparoscopy scopes and instruments | Small laparoscopes and instruments for performing surgery through very small incisions. | MicroLap® |
| Specialty Laparoscopic Devices | Specialized elevator, retractor for laparoscopic hysterectomy | VCARE® |

Endoscopic Technologies

Gastrointestinal (GI) endoscopy is the examination of the digestive tract with a flexible, lighted instrument referred to as an "endoscope". This instrument enables the physician to directly visualize the esophagus, stomach, portions of the small intestine, and colon. This technology allows the physician to more accurately diagnose and treat diseases of the digestive system. Through these scopes a physician may take biopsies, dilate narrowed areas referred to as strictures, and remove polyps which are growths in the digestive tract. Some of the more common conditions which may be diagnosed and treated using this procedure include ulcers, Crohn's disease, ulcerative colitis and gallbladder disease.

We offer a comprehensive line of minimally invasive diagnostic and therapeutic products used in conjunction with procedures which require flexible endoscopy. Our principal customers include GI endoscopists, pulmonologists,

Table of Contents

and nurses which perform both diagnostic and therapeutic endoscopic procedures in hospitals and outpatient clinics.

Our primary focus is to identify, develop, acquire, manufacture and market differentiated medical devices, which improve outcomes in the diagnosis and treatment of gastrointestinal and pulmonary disorders. Our diagnostic and therapeutic product offerings for GI and pulmonology include forceps, accessories, bronchoscopy devices, dilatation, hemostasis, biliary devices, and polypectomy.

| Product | Endoscopic Technologies Description | Brand Name |

Marketing

A significant portion of our products are distributed domestically directly to more than 6,000 hospitals and other healthcare institutions as well as through medical specialty distributors and surgeons. We are not dependent on any single customer and no single customer accounted for more than 10% of our net sales in 2004, 2005 and 2006.

A significant portion of our U.S. sales are to customers affiliated with GPOs, IHNs and other large national or regional accounts, as well as to the Veterans Administration and other hospitals operated by the Federal government. For hospital inventory management purposes, some of our customers prefer to purchase our products through independent third-party medical product distributors.

In order to provide a high level of expertise to the medical specialties we serve, our domestic sales force consists of the following:

- 210 sales representatives selling arthroscopy and powered surgical instrument products employed by independent sales agent groups;
 - 60 employee sales representatives selling electrosurgery products;
 - 30 employee sales representatives selling endosurgery products;
 - 40 employee sales representatives selling patient care products;
 - 50 employee sales representatives selling endoscopic technologies products.

Each employee sales representative is assigned a defined geographic area and compensated on a commission basis or through a combination of salary and commission. The sales force is supervised and supported by either area directors or district managers. Sales agent groups are used in the United States to sell our arthroscopy, multi-specialty medical video systems and powered surgical instrument products. These sales agent groups are paid a commission for sales made to customers while home office sales and marketing management provide the overall direction for sales of our products.

Our Corporate sales organization is responsible for interacting with large regional and national accounts (eg. GPOs, IHNs, etc.). We have contracts with many such organizations and believe that, with certain exceptions, the loss of any individual group purchasing contract will not adversely impact our business. In

Table of Contents

addition, all of our sales professionals are required to work closely with distributors where applicable and maintain close relationships with end-users.

The sale of our products is accompanied by initial and ongoing in-service end-user training. Each of our dedicated sales professionals are highly knowledgeable in the applications and procedures for the products they sell. Our sales professionals, in turn, provide surgeons and medical personnel with information relating to the technical features and benefits of our products.

Maintaining and expanding our international presence is an important component of our long-term growth plan. Our products are sold in over 100 foreign countries. International sales efforts are coordinated through local country dealers or through direct in country sales. We distribute our products through sales subsidiaries and branches with offices located in Australia, Austria, Belgium, Canada, France, Germany, Korea, the Netherlands, Spain, Poland and the United Kingdom. In these countries, our sales are denominated in the local currency. In the remaining countries where our products are sold through independent distributors, sales are denominated in United States dollars.

We sell to a diversified base of customers around the world and, therefore, believe there is no material concentration of credit risk.

Manufacturing

We manufacture substantially all of our products and assemble them from components we produce. Our strategy has historically been to vertically integrate our manufacturing facilities in order to develop competitive advantage. This integration provides us with cost efficient and flexible manufacturing operations which permit us to allocate capital more efficiently. Additionally, we attempt to exploit commercial synergies between operations, such as the procurement of common raw materials and components used in production.

Raw material costs constitute a substantial portion of our cost of production. We use numerous raw materials and components in the design, development and manufacturing of our products. Substantially all of our raw materials and select components used in the manufacturing process are procured from external suppliers. We work closely with multiple suppliers to ensure continuity of supply while maintaining high quality and reliability. None of our critical raw materials and components are procured from single sources for reasons of quality assurance, sole source availability, cost effectiveness or constraints resulting from regulatory requirements. The loss of any existing supplier or supplier contract would not have a material adverse effect on our financial and operational performance. To date, we have not experienced any protracted interruption in the availability of raw materials and components necessary to fulfill production schedules.

All of our products are classified as medical devices subject to regulation by numerous agencies and legislative bodies, including the United States Food and Drug Administration (“FDA”) and comparable foreign counter parts. The FDA’s Quality System Regulations set forth standards for our product design and manufacturing processes, require the maintenance of certain records and provide for on-site inspections of our facilities by the FDA. In many of the foreign countries in which we manufacture and distribute our products we are subject to regulatory requirements affecting, among other things, product performance standards, packaging requirements, labeling requirements and import laws. Regulatory requirements affecting the Company vary from country to country. The timeframes

Table of Contents

and costs for regulatory submission and approval from foreign agencies or legislative bodies may vary from those required by the FDA. Certain requirements for approval from foreign agencies or legislative bodies may also differ from those of the FDA.

We believe that our production and inventory management practices are characteristic of those in the medical device industry. Substantially all of our products are stocked in inventory and are not manufactured to order or to individual customer specifications. We schedule production and maintain adequate levels of safety stock based on a number of factors including, experience, knowledge of customer ordering patterns, demand, manufacturing lead times and optimal quantities required to maintain the highest possible service levels. Customer orders are generally processed for immediate shipment and backlog of firm orders is therefore not considered material to an understanding of our business.

Research and Development

New and improved products play a critical role in our continued sales growth. Internal research and development efforts focus on the development of new products and product technological and design improvements aimed at complementing and expanding existing product lines. We continually seek to leverage new technologies which improve the durability, performance and usability of existing products. In addition, we maintain close working relationships with surgeons, inventors and operating room personnel who often make new product and technology disclosures, principally in procedure-specific areas. For clinical and commercially promising disclosures, we seek to obtain rights to these ideas through negotiated agreements. Such agreements typically compensate the originator through royalty payments based upon a percentage of licensed product net sales. Royalty expense approximated \$3.8 million, \$4.6 million and \$4.4 million in 2004, 2005 and 2006, respectively.

Amounts expended for Company sponsored research and development was approximately \$20.2 million, \$25.5 million and \$30.7 million during 2004, 2005, and 2006, respectively.

We have rights to significant intellectual property, including United States patents and foreign equivalent patents which cover a wide range of our products. We own a majority of these patents and have exclusive and non-exclusive licensing rights to the remainder. In addition, certain of these patents have currently been licensed to third parties on a non-exclusive basis. We believe that the development of new products and technological and design improvements to existing products will continue to be of primary importance in maintaining our competitive position.

Competition

The market for our products is highly competitive and our customers generally have numerous alternatives of supply. Many of our competitors offer a range of products in areas other than those in which we compete, which may make such competitors more attractive to surgeons, hospitals, group purchasing organizations and others. In addition, several of our competitors are large, technically-competent firms with substantial assets.

The following chart identifies our principal competitors in each of our key business areas:

Table of Contents

| <u>Business Area</u> | <u>Competitor</u> |
|---------------------------------|---|
| Arthroscopy | Smith & Nephew, plc Arthrex, Inc. Stryker Corporation ArthroCare Corporation Johnson & Johnson; Mitek Worldwide |
| Powered Surgical Instruments | Stryker Corporation Medtronic, Inc. Midas Rex and Xomed divisions The Anspach Effort, Inc. MicroAire Surgical Instruments, LLC |
| Electrosurgery | Tyco International Ltd.; Valleylab 3M Company ERBE Elektromedizin GmbH |
| Patient Care | Tyco International Ltd.; Kendall 3M Company |
| Endosurgery | Johnson & Johnson; Ethicon Endo-Surgery, Inc. Tyco International Ltd.; U.S.Surgical |
| Endoscopic Technologies | Boston Scientific Corporation - Endoscopy Wilson-Cook Medical, Inc. Olympus America, Inc. U.S. Endoscopy |

Factors which affect our competitive posture include product design, customer acceptance, service and delivery capabilities, pricing and product development/improvement. In the future, other alternatives such as new medical procedures or pharmaceuticals may become interchangeable alternatives to our products.

Government Regulation and Quality Systems

Substantially all of our products are classified as medical devices subject to regulation by numerous agencies and legislative bodies, including the FDA and comparable foreign counterparts. Authorization to commercially distribute our products in the U.S. is granted by the FDA under a procedure referred to as 510(k) premarket notification. This process requires us to demonstrate that our new product, line extension or modified product is substantially equivalent

to a legally marketed device which was on the market prior to May 28, 1976 or is currently on the U.S. market and does not require premarket approval. Substantially all of our products have been classified as either Class I or Class II devices with the FDA, indicating that they are subject to the 510(k) premarketing notification clearance as discussed above and must continually meet certain FDA standards (Our products are classified as Class I, IIa and IIb in the European Union (EU) and subject to regulation by our European Notified Body). Our FDA clearance is subject to continual review and future discovery of previously unknown events could result in restrictions being placed on a product's marketing or notification from the FDA to halt the distribution of certain medical devices.

-18-

Table of Contents

Medical device regulations continue to evolve world-wide. Products marketed in the EU and other countries require preparation of technical files and dossiers which demonstrate compliance with applicable local regulations. Products marketed in Australia are subject to a new classification system and must be re-registered under the updated Therapeutics Goods Act's by October 2007 in order to continue distribution. Products marketed in Japan must be re-registered under the Ministry of Health's, recently updated Pharmaceutical Affairs Law (PAL). As government regulations continue to change, there is a risk that the distribution of some of our products may be interrupted or discontinued if they do not meet the new requirements.

Our operations are supported by quality assurance/regulatory compliance personnel tasked with monitoring compliance to design controls, process controls and the other relevant government regulations for all of our design, manufacturing, distribution and servicing activities. We and substantially all of our products are subject to the provisions of the Federal Food, Drug and Cosmetic Act of 1938, as amended by the Medical Device Amendments of 1976, Safe Medical Device Act of 1990, Medical Device Modernization Act of 1997, Medical User Fee and Modernization Act of 2002 and similar international regulations, such as the European Union Medical Device Directives.

As a manufacturer of medical devices, the FDA's Quality System Regulations as specified in Title 21, Code of Federal Regulation (CFR) part 820, set forth standards for our product design and manufacturing processes, require the maintenance of certain records, provide for on-site inspection of our facilities and continuing review by the FDA. Many of our products are also subject to industry-defined standards. Such industry-defined product standards are generally formulated by committees of the Association for the Advancement of Medical Instrumentation (AAMI), International Electrotechnical Commission (IEC) and the International Organization for Standardization (ISO). We believe that our products and processes presently meet applicable standards in all material respects.

As noted above, our facilities are subject to periodic inspection by the FDA for, among other things, conformance to Quality System Regulation and Current Good Manufacturing Practice ("CGMP") requirements. Following an inspection, the FDA typically provides its observations, if any, in the form of a Form 483 (Notice of Inspectional Observations) with specific observations concerning potential violation of regulations. In December 2004, the FDA initiated an inspection of our Largo, Florida manufacturing facility. Following the inspection, the FDA issued to us a Form 483 which included observations related to our corrective and preventive action procedures for nonconforming products and other quality problems. Although we responded to the Form 483 to address and correct the deficiencies, the FDA further issued a warning letter in June 2005 relating to these observations. We subsequently responded to the FDA with a plan of the corrective actions that we had taken or proposed to take. In that response, we committed to further developing and implementing, in a timely manner, the principles and strategies of systems-based quality management for improved CGMP compliance, operational performance and efficiencies. We consider the receipt of a warning letter to be an important regulatory event. Accordingly, we have undertaken corrective actions that have involved significant additional costs to the Company. In May 2006, the FDA initiated a re-inspection of our Largo, Florida manufacturing facility to verify issues related to the June 2005 warning letter and December 2004 Form 483 observations had been corrected. No further Form 483 observations were issued by FDA during the May 2006 inspection. We will continue implementing and monitoring continuous improvement activities through our Company-wide quality systems

Table of Contents

initiative. However, there can be no assurance that the actions undertaken by the Company will ensure that we will not receive an additional Form 483 or warning letter, or other regulatory actions which may include consent decrees or fines.

We market our products in several foreign countries and therefore are subject to regulations affecting, among other things, product standards, packaging requirements, labeling requirements and import laws. Many of the regulations applicable to our devices and products in these countries are similar to those of the FDA. The member countries of the European Union have adopted the European Medical Device Directives, which create a single set of medical device regulations for all member countries. These regulations require companies that wish to manufacture and distribute medical devices in the European Union maintain quality system certification through European Union recognized Notified Bodies. These Notified Bodies authorize the use of the CE Mark allowing free movement of our products throughout the member countries. Requirements pertaining to our products vary widely from country to country, ranging from simple product registrations to detailed submissions such as those required by the FDA. We believe that our products currently meet applicable standards for the countries in which they are marketed.

Our products may become subject to recall or market withdrawal regulations and we have made product recalls in the past. No product recall has had a material effect on our financial condition or results of operations, however there can be no assurance that regulatory issues will not have a material adverse effect in the future.

Any change in existing federal, state, foreign laws or regulations, or in the interpretation or enforcement thereof, or the promulgation or any additional laws or regulations may result in a material adverse effect on our financial condition or results of operations.

Employees

As of December 31, 2006, we had approximately 3,200 full-time employees, including more than 2,000 in operations, 161 in research and development, and the remaining in sales, marketing and related administrative support. We believe that we have good relations with our employees and have never experienced a strike or similar work stoppage. None of our employees are represented by a labor union.

Item 1A. Risk Factors

An investment in our securities, including our common stock, involves a high degree of risk. Investors should carefully consider the specific factors set forth below as well as the other information included or incorporated by reference in this Form 10-K. See “Forward Looking Statements”.

Our financial performance is subject to the risks inherent in our acquisition strategy, including the effects of increased borrowing and integration of newly acquired businesses or product lines.

A key element of our business strategy has been to expand through acquisitions and we may seek to pursue additional acquisitions in the future. Our success is dependent in part upon our ability to integrate acquired companies or product lines into our existing operations. We may not have sufficient management and other resources to accomplish the integration of

Table of Contents

our past and future acquisitions and implementing our acquisition strategy may strain our relationship with customers, suppliers, distributors, manufacturing personnel or others. There can be no assurance that we will be able to identify and make acquisitions on acceptable terms or that we will be able to obtain financing for such acquisitions on acceptable terms. In addition, while we are generally entitled to customary indemnification from sellers of businesses for any difficulties that may have arisen prior to our acquisition of each business, acquisitions may involve exposure to unknown liabilities and the amount and time for claiming under these indemnification provisions is often limited. As a result, our financial performance is now and will continue to be subject to various risks associated with the acquisition of businesses, including the financial effects associated with any increased borrowing required to fund such acquisitions or with the integration of such businesses.

Failure to comply with regulatory requirements may result in recalls, fines or materially adverse implications.

All of our products are classified as medical devices subject to regulation by the FDA. As a manufacturer of medical devices, our manufacturing processes and facilities are subject to on-site inspection and continuing review by the FDA for compliance with the Quality System Regulations. Manufacturing and sales of our products outside the United States are also subject to foreign regulatory requirements which vary from country to country. Moreover, we are generally required to obtain regulatory clearance or approval prior to marketing a new product. The time required to obtain approvals from foreign countries may be longer or shorter than that required for FDA approval, and requirements for foreign approvals may differ from FDA requirements. Failure to comply with applicable domestic and/or foreign regulatory requirements may result in:

- fines or other enforcement actions;
- recall or seizure of products;
- total or partial suspension of production;
- withdrawal of existing product approvals or clearances;
- refusal to approve or clear new applications or notices;
- increased quality control costs; or
- criminal prosecution.

Failure to comply with Quality System Regulations and applicable foreign regulations could result in a material adverse effect on our business, financial condition or results of operations.

If we are not able to manufacture products in compliance with regulatory standards, we may decide to cease manufacturing of those products and may be subject to product recall.

In addition to the Quality System Regulations, many of our products are also subject to industry-defined standards. We may not be able to comply with these regulations and standards due to deficiencies in component parts or our manufacturing processes. If we are not able to comply with the Quality System Regulations or industry-defined standards, we may not be able to fill customer orders and we may decide to cease production of non-compliant products. Failure to produce products could affect our profit margins and could lead to loss of customers.

Table of Contents

Our products are subject to product recall and we have made product recalls in the past. Although no recall has had a material adverse effect on our business, financial condition or results of operations, we cannot assure you that regulatory issues will not have a material adverse effect in the future or that product recalls will not harm our reputation and our customer relationships.

The highly competitive market for our products may create adverse pricing pressures.

The market for our products is highly competitive and our customers have numerous alternatives of supply. Many of our competitors offer a range of products in areas other than those in which we compete, which may make such competitors more attractive to surgeons, hospitals, group purchasing organizations and others. In addition, several of our competitors are large, technically-competent firms with substantial assets. Competitive pricing pressures or the introduction of new products by our competitors could have an adverse effect on our revenues. See “Competition” for a further discussion of these competitive forces.

Factors which may influence our customers’ choice of competitor products include:

- changes in surgeon preferences;
- increases or decreases in health care spending related to medical devices;
- our inability to supply products to them, as a result of product recall, market withdrawal or back-order;
- the introduction by competitors of new products or new features to existing products;
- the introduction by competitors of alternative surgical technology; and
- advances in surgical procedures, discoveries or developments in the health care industry.

We use a variety of raw materials in our businesses, and significant shortages or price increases could increase our operating costs and adversely impact the competitive positions of our products.

Our reliance on certain suppliers and commodity markets to secure raw materials used in our products exposes us to volatility in the prices and availability of raw materials. In some instances, we participate in commodity markets that may be subject to allocations by suppliers. A disruption in deliveries from our suppliers, price increases, or decreased availability of raw materials or commodities, could have an adverse effect on our ability to meet our commitments to customers or increase our operating costs. We believe that our supply management practices are based on an appropriate balancing of the foreseeable risks and the costs of alternative practices. Nonetheless, price increases or the unavailability of some raw materials may have an adverse effect on our results of operations or financial condition.

Cost reduction efforts in the health care industry could put pressures on our prices and margins.

In recent years, the health care industry has undergone significant change driven by various efforts to reduce costs. Such efforts include national health care reform, trends towards managed care, cuts in Medicare,

Table of Contents

consolidation of health care distribution companies and collective purchasing arrangements by GPOs and IHNs. Demand and prices for our products may be adversely affected by such trends.

We may not be able to keep pace with technological change or to successfully develop new products with wide market acceptance, which could cause us to lose business to competitors.

The market for our products is characterized by rapidly changing technology. Our future financial performance will depend in part on our ability to develop and manufacture new products on a cost-effective basis, to introduce them to the market on a timely basis, and to have them accepted by surgeons.

We may not be able to keep pace with technology or to develop viable new products. Factors which may result in delays of new product introductions or cancellation of our plans to manufacture and market new products include:

- capital constraints;
- research and development delays;
- delays in securing regulatory approvals; or
- changes in the competitive landscape, including the emergence of alternative products or solutions which reduce or eliminate the markets for pending products.

Our new products may fail to achieve expected levels of market acceptance.

New product introductions may fail to achieve market acceptance. The degree of market acceptance for any of our products will depend upon a number of factors, including:

- our ability to develop and introduce new products and product enhancements in the time frames we currently estimate;
- our ability to successfully implement new technologies;
- the market's readiness to accept new products;
- having adequate financial and technological resources for future product development and promotion;
- the efficacy of our products; and
- the prices of our products compared to the prices of our competitors' products.

If our new products do not achieve market acceptance, we may be unable to recover our investments and may lose business to competitors.

In addition, some of the companies with which we now compete or may compete in the future have or may have more extensive research, marketing and manufacturing capabilities and significantly greater technical and personnel resources than we do, and may be better positioned to continue to improve their technology in order to compete in an evolving industry. See "Competition" for a further discussion of these competitive forces.

Our senior credit agreement contains covenants which may limit our flexibility or prevent us from taking actions.

Our senior credit agreement contains, and future credit facilities are expected to contain, certain restrictive covenants which will affect, and in

Table of Contents

many respects significantly limit or prohibit, among other things, our ability to:

- incur indebtedness;
- make investments;
- engage in transactions with affiliates;
- pay dividends or make other distributions on, or redeem or repurchase, capital stock;
- sell assets; and
- pursue acquisitions.

These covenants, unless waived, may prevent us from pursuing acquisitions, significantly limit our operating and financial flexibility and limit our ability to respond to changes in our business or competitive activities. Our ability to comply with such provisions may be affected by events beyond our control. In the event of any default under our credit agreement, the credit agreement lenders may elect to declare all amounts borrowed under our credit agreement, together with accrued interest, to be due and payable. If we were unable to repay such borrowings, the credit agreement lenders could proceed against collateral securing the credit agreement, which consists of substantially all of our property and assets, except for our accounts receivable and related rights which are sold in connection with the accounts receivable sales agreement. See “Management’s Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources” for a discussion of the accounts receivable sales agreement. Our credit agreement also contains a material adverse effect clause which may limit our ability to access additional funding under our credit agreement should a material adverse change in our business occur.

Our substantial leverage and debt service requirements may require us to adopt alternative business strategies.

We have indebtedness that is substantial in relation to our shareholders’ equity, as well as interest and debt service requirements that are significant compared to our cash flow from operations. As of December 31, 2006, we had \$267.8 million of debt outstanding, representing 38% of total capitalization and which does not include the \$44 million of accounts receivable sold under the accounts receivable sales agreement. See “Management’s Discussion and Analysis of Financial Condition and Results of Operations—Liquidity and Capital Resources”.

The degree to which we are leveraged could have important consequences to investors, including but not limited to the following:

- a substantial portion of our cash flow from operations must be dedicated to debt service and will not be available for operations, capital expenditures, acquisitions, dividends and other purposes;
- our ability to obtain additional financing in the future for working capital, capital expenditures, acquisitions or general corporate purposes may be limited or impaired, or may be at higher interest rates;
 - we may be at a competitive disadvantage when compared to competitors that are less leveraged;
 - we may be hindered in our ability to adjust rapidly to market conditions;

Table of Contents

- our degree of leverage could make us more vulnerable in the event of a downturn in general economic conditions or other adverse circumstances applicable to us; and
- our interest expense could increase if interest rates in general increase because a portion of our borrowings, including our borrowings under our credit agreement, are and will continue to be at variable rates of interest.

We may not be able to generate sufficient cash to service our indebtedness, which could require us to reduce our expenditures, sell assets, restructure our indebtedness or seek additional equity capital.

Our ability to satisfy our obligations will depend upon our future operating performance, which will be affected by prevailing economic conditions and financial, business and other factors, many of which are beyond our control. We may not have sufficient cash flow available to enable us to meet our obligations. If we are unable to service our indebtedness, we will be forced to adopt an alternative strategy that may include actions such as foregoing acquisitions, reducing or delaying capital expenditures, selling assets, restructuring or refinancing our indebtedness or seeking additional equity capital. We cannot assure you that any of these strategies could be implemented on terms acceptable to us, if at all. See “Management’s Discussion and Analysis of Financial Condition and Results of Operations - Liquidity and Capital Resources” for a discussion of our indebtedness and its implications.

We may be unable to continue to sell our accounts receivable, which could require us to seek alternative sources of financing.

Under our accounts receivable sales agreement, there are certain statistical ratios which must be maintained relating to the pool of receivables in order for us to continue selling to the purchaser. These ratios relate to sales dilution and losses on accounts receivable. If new accounts receivable arising in the normal course of business do not qualify for sale or the purchaser otherwise ceases to purchase our receivables, we may require access to alternate sources of working capital, which may be more expensive or difficult to obtain. Our accounts receivable sales agreement, as amended, also requires us to obtain a commitment (the “purchaser commitment”) from the purchaser to fund the purchase of our accounts receivable. The purchaser commitment was amended effective October 23, 2006 whereby it was extended through October 31, 2008 under substantially the same terms and conditions. In the event we are unable to renew our purchaser commitment in the future, we would need to access alternate sources of working capital which may be more expensive or difficult to obtain.

If we infringe third parties’ patents, or if we lose our patents or they are held to be invalid, we could become subject to liability and our competitive position could be harmed.

Much of the technology used in the markets in which we compete is covered by patents. We have numerous U.S. patents and corresponding foreign patents on products expiring at various dates from 2007 through 2030 and have additional patent applications pending. See “Research and Development” for a further description of our patents. The loss of our patents could reduce the value of the related products and any related competitive advantage. Competitors

Table of Contents

may also be able to design around our patents and to compete effectively with our products. In addition, the cost of enforcing our patents against third parties and defending our products against patent infringement actions by others could be substantial. We cannot assure you that:

- pending patent applications will result in issued patents,
- patents issued to or licensed by us will not be challenged by competitors,
- our patents will be found to be valid or sufficiently broad to protect our technology or provide us with a competitive advantage, or
- we will be successful in defending against pending or future patent infringement claims asserted against our products.

Ordering patterns of our customers may change resulting in reductions in sales.

Our hospital and surgery center customers purchase our products in quantities sufficient to meet their anticipated demand. Likewise, our health care distributor customers purchase our products for ultimate resale to health care providers in quantities sufficient to meet the anticipated requirements of the distributors' customers. Should inventories of our products owned by our hospital, surgery center and distributor customers grow to levels higher than their requirements, our customers may reduce the ordering of products from us. This could result in reduced sales during a financial accounting period.

Our significant international operations subject us to risks associated with operating in foreign countries.

A significant portion of our revenues are derived from foreign sales. As a result, our international presence exposes us to certain inherent risks, including:

- devaluations and fluctuations in currency exchange rates;
- imposition of limitations on conversions of foreign currencies into dollars or remittance of dividends and other payments by international subsidiaries;
- imposition or increase of withholding and other taxes on remittances and other payments by international subsidiaries;
- trade barriers;
- political risks, including political instability;
- reliance on third parties to distribute our products;
- hyperinflation in certain foreign countries; and
- imposition or increase of investment and other restrictions by foreign governments.

We cannot assure you that such risks will not have a material adverse effect on our business and results of operations.

We can be sued for producing defective products and our insurance coverage may be insufficient to cover the nature and amount of any product liability claims.

Table of Contents

The nature of our products as medical devices and today's litigious environment should be regarded as potential risks which could significantly and adversely affect our financial condition and results of operations. The insurance we maintain to protect against claims associated with the use of our products have deductibles and may not adequately cover the amount or nature of any claim asserted against us. We are also exposed to the risk that our insurers may become insolvent or that premiums may increase substantially. See "Legal Proceedings" for a further discussion of the risk of product liability actions and our insurance coverage.

Damage to our physical properties as a result of windstorm, earthquake, fire or other natural or man-made disaster may cause a financial loss and a loss of customers.

Although we maintain insurance coverage for physical damage to our property and the resultant losses that could occur during a business interruption, we are required to pay deductibles and our insurance coverage is limited to certain caps. For example, our deductible for windstorm damage to our Florida property amounts to 2% of any loss and coverage for earthquake damage to our California properties is limited to \$10 million. Further, while insurance reimburses us for our lost gross earnings during a business interruption, if we are unable to supply our customers with our products for an extended period of time, there can be no assurance that we will regain the customers' business once the product supply is returned to normal.

Table of Contents**Item 2. Properties****Facilities**

The following table sets forth certain information with respect to our principal operating facilities. We believe that our facilities are generally well maintained, are suitable to support our business and adequate for present and anticipated needs.

| Location | Square Feet | Own or Lease | Lease Expiration |
|-----------------------------------|--------------------|---------------------|--------------------------------|
| Utica, NY (two facilities) | 650,000 | Own | - |
| Largo, FL | 278,000 | Own | - |
| Rome, NY | 120,000 | Own | - |
| Centennial, CO | 87,500 | Own | - |
| Tampere, Finland | 5,662 | Own | - |
| El Paso, TX | 96,000 | Lease | March 2010 |
| Billerica, MA | 60,000 | Lease | September 2007 |
| Juarez, Mexico | 44,000 | Lease | December 2009 |
| Montreal, Canada (two facilities) | 20,940 | Lease | April 2007 & March 2009 |
| Santa Barbara, CA | 18,600 | Lease | December 2008 & September 2013 |
| Frenchs Forest, Australia | 16,903 | Lease | July 2008 |
| Tampere, Finland | 15,457 | Lease | Open Ended |
| Brussels, Belgium | 39,073 | Lease | June 2015 |
| Anaheim, CA | 14,037 | Lease | October 2012 |
| Mississauga, Canada | 13,500 | Lease | May 2008 |
| Swindon, Wiltshire, UK | 10,000 | Lease | December 2015 |
| Portland, OR | 9,107 | Lease | September 2008 |
| Seoul, Korea | 7,513 | Lease | August 2007 |
| Frankfurt, Germany | 6,900 | Lease | December 2012 |
| Shepshed, Leicestershire, UK | 5,000 | Lease | October 2015 |
| Barcelona, Spain | 2,691 | Lease | May 2009 |
| Rungis Cedex, France | 2,637 | Lease | November 2011 |

Item 3. Legal Proceedings

From time to time, we are a defendant in certain lawsuits alleging product liability, patent infringement, or other claims incurred in the ordinary course of business. Likewise, from time to time, the Company may receive a subpoena from a government agency such as the Equal Employment Opportunity Commission, Occupational Safety and Health Administration, the Department of Labor, the Treasury Department, and other federal and state agencies or foreign governments or government agencies. These subpoenae may or may not be routine inquiries, or may begin as routine inquiries and over time develop into enforcement actions of various types. The product liability claims are generally covered by various insurance policies, subject to certain deductible amounts and maximum policy limits. When there is no insurance coverage, as would typically be the case primarily in lawsuits alleging patent infringement or in connection with certain government investigations, we establish sufficient reserves to cover probable losses associated with such claims. We do not expect that the resolution of any pending claims or investigations will have a material adverse effect on our financial condition or results of operations. There can be no assurance, however, that future claims or investigations, or the costs associated with claims or investigations, especially claims and investigations not covered by insurance, will not have a material adverse effect on our future performance.

Manufacturers of medical products may face exposure to significant product liability claims. To date, we have not experienced any product liability claims that are material to our financial statements or condition, but any such claims arising in the future could have a material adverse effect on our business or results of operations. We currently maintain commercial product liability insurance of \$25 million per incident and \$25 million in the aggregate annually, which we believe is adequate. This coverage is on a claims-made basis. There can be no assurance that claims will not exceed insurance coverage or that such insurance will be available in the future at a reasonable cost to us.

Our operations are subject, and in the past have been subject, to a number of environmental laws and regulations governing, among other things, air emissions, wastewater discharges, the use, handling and disposal of hazardous substances and wastes, soil and groundwater remediation and employee health and safety. In some jurisdictions environmental requirements may be expected to become more stringent in the future. In the United States certain environmental laws can impose liability for the entire cost of site restoration upon each of the parties that may have contributed to conditions at the site regardless of fault or the lawfulness of the party's activities. While we do not believe that the present costs of environmental compliance and remediation are material, there can be no assurance that future compliance or remedial obligations could not have a material adverse effect on our financial condition or results of operations.

In November 2003, we commenced litigation against Johnson & Johnson and several of its subsidiaries, including Ethicon, Inc. for violation of federal and state antitrust laws. The lawsuit claims that Johnson & Johnson engaged in illegal and anticompetitive conduct with respect to sales of product used in endoscopic surgery, resulting in higher prices to consumers and the exclusion of competition. We have sought relief which includes an injunction restraining Johnson & Johnson from continuing its anticompetitive practice as well as receiving the maximum amount of damages allowed by law. The discovery phase is now essentially complete

Table of Contents

and Johnson & Johnson filed a motion for summary judgment which was denied by the Court by Order dated May 2, 2006. This Order does not represent a determination on the merits with respect to the Company's claims against Johnson & Johnson, but rather represents a determination that the Company has produced sufficient evidence to warrant submitting the case to a jury. The Company expects to submit briefs on certain evidentiary matters in the next few weeks, with the case currently scheduled for a jury trial to commence on April 23, 2007. There can be no assurance that the case will in fact proceed to trial on that date. The Company believes that its claims are well-grounded in fact and law, but there can be no assurance that it will be successful in its claims in a trial before a jury.

On April 7, 2006, CONMED received a copy of a complaint filed in the United States District for the Northern District of New York on behalf of a purported class of former CONMED Linvatec sales representatives. The complaint alleges that the former sales representatives were entitled to, but did not receive, severance in 2003 when CONMED Linvatec restructured its distribution channels. We believe that the maximum exposure related to this complaint is \$2.5 to \$3.0 million, not including any interest, fees or costs that might be awarded if the five named plaintiffs were to prevail on their own behalf as well as on behalf of all members of the purported class. CONMED Linvatec did not generally pay severance during the 2003 restructuring because the former sales representatives were offered sales positions with CONMED Linvatec's new manufacturer's representatives. Other than three of the five named plaintiffs in the class action, nearly all of CONMED Linvatec's former sales representatives accepted such positions.

The Company has filed motions which, if granted, would result in the dismissal of the case, subject to any appeals the plaintiffs could pursue. The Court held a hearing on the Company's motions on January 5, 2007, and took the matter under advisement. There is no fixed time frame within the Court must rule on the motions. The Company believes there is no merit to the claims asserted in the Complaint, although there can be no assurance that the Company will prevail in the litigation.

Item 4. Submission of Matters to a Vote of Security Holders

Not Applicable.

Table of Contents**PART II****Item 5. Market for the Registrant’s Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities**

Our common stock, par value \$.01 per share, is traded on the Nasdaq Stock Market under the symbol “CNMD”. At January 31, 2007, there were 1,076 registered holders of our common stock and approximately 8,683 accounts held in “street name”.

The following table sets forth quarterly high and low sales prices for the years ended December 31, 2005 and 2006, as reported by the Nasdaq Stock Market.

| Period | 2005 | |
|----------------|-------------|------------|
| | High | Low |
| First Quarter | \$ 30.16 | \$ 26.69 |
| Second Quarter | 32.58 | 29.27 |
| Third Quarter | 31.81 | 27.44 |
| Fourth Quarter | 27.85 | 22.55 |
| Period | 2006 | |
| | High | Low |
| First Quarter | \$ 24.00 | \$ 18.09 |
| Second Quarter | 22.05 | 18.75 |
| Third Quarter | 21.29 | 19.19 |
| Fourth Quarter | 23.32 | 21.10 |

We did not pay cash dividends on our common stock during 2005 or 2006 and do not currently intend to pay dividends for the foreseeable future. Future decisions as to the payment of dividends will be at the discretion of the Board of Directors, subject to conditions then existing, including our financial requirements and condition and the limitation and payment of cash dividends contained in debt agreements.

Our Board of Directors has authorized a share repurchase program; see Note 8 to the Consolidated Financial Statements.

Information relating to compensation plans under which equity securities of CONMED Corporation are authorized for issuance is set forth in the section captioned “Equity Compensation Plans” in CONMED Corporation’s definitive Proxy Statement or other informational filing for our 2007 Annual Meeting of Stockholders and all such information is

incorporated herein by reference.

Performance Graph

The performance graph below compares the yearly percentage change in the Company's Common Stock with the cumulative total return of the NASDAQ Composite Index and the cumulative total return of the Standard & Poor's Health Care Equipment Index. In each case, the cumulative total return assumes reinvestment of dividends into the same class of equity securities at the frequency with which dividends are paid on such securities during the applicable fiscal year.

Table of Contents**Item 6. Selected Financial Data**

The following table sets forth selected historical financial data for the years ended December 31, 2002, 2003, 2004, 2005 and 2006. The financial data set forth below should be read in conjunction with the information under “Management’s Discussion and Analysis of Financial Condition and Results of Operations” included in Item 7 of this Form 10-K and the Financial Statements of the Company and the notes thereto.
