The aggregate market value of the voting stock held by non-affiliates of the registrant was \$39,391,957 million based upon the closing sale price of \$25.20 on the NYSE MKT on December 31, 2012.

At September 12, 2013, there were 2,352,260 shares outstanding of the registrant's Common stock, \$.33-1/3 par value.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the registrant's definitive proxy statement relating to the 2013 Annual Meeting of Shareholders, to be filed with the Securities and Exchange Commission, are incorporated by reference in Part III, Items 10 through 14 on Form 10-K as indicated herein.

Forward-Looking Statements

This Annual Report on Form 10-K contains forward-looking statements that are based on management's expectations, estimates, projections and assumptions. Words such as "expects," "anticipates," "plans," "believes," "scheduled," "estimates" a variations of these words and similar expressions are intended to identify forward-looking statements. Forward-looking statements are made pursuant to the safe harbor provisions of the Private Securities Litigation Reform Act of 1995, as amended. These statements are not guarantees of future performance and involve certain risks and uncertainties that are difficult to predict. Therefore, actual future results and trends may differ materially from what is forecast in forward-looking statements due to a variety of factors, including, without limitation:

Changing priorities or decreases in the U.S. government's defense budget (including changes in priorities in response to terrorist threats, improvement of homeland security and the overall financial health of the U.S. Government);

Termination of government contracts due to unilateral government action;

Differences in anticipated and actual program performance, including the ability to perform under long-term fixed-price contracts within estimated costs, and performance issues with key suppliers and subcontractors;

Potential of changing prices for energy and raw materials.

All forward-looking statements speak only as of the date of this report or, in the case of any document incorporated by reference, the date of that document. All subsequent written and oral forward-looking statements attributable to the Company or any person acting on the Company's behalf are qualified by the cautionary statements in this section. The Company does not undertake any obligation to update or publicly release any revisions to forward-looking statements to reflect events, circumstances or changes in expectations after the date of this report.

PART I

Item 1. Business General

Espey Mfg. & Electronics Corp. ("Espey") is a power electronics design and original equipment manufacturing (OEM) company with a long history of developing and delivering highly reliable products for use in military and severe environment applications. All design, manufacturing, and testing is performed in our 150,000+ square foot facility located at 233 Ballston Ave, Saratoga Springs, New York. Espey is classified as a "smaller reporting company" for purposes of the reporting requirements under the Securities Exchange Act of 1934, as amended. Espey's common stock is publicly-traded on the NYSE MKT under the symbol "ESP."

Espey began operations after incorporation in New York in 1928. We strive to remain competitive as a leader in high power energy conversion and transformer solutions through the design and manufacture of new and improved products by using advanced and "cutting edge" electronics technologies.

Espey is ISO 9001:2008 certified and our primary products are power supplies, power converters, filters, power transformers, magnetic components, power distribution equipment, ups systems, antennas and high power radar systems. The applications of these products include AC and DC locomotives, shipboard power, shipboard radar, airborne power, ground-based radar, and ground mobile power. The Company is in the process of obtaining AS9100 certification. This quality management system is specific to the aerospace industry. Major aerospace manufacturers and suppliers worldwide require compliance to AS9100 as a condition of doing business with them. Obtaining certification will allow the Company to maintain current business and will provide an opportunity to expand the Company's qualification to bid on more work in the aerospace industry.

Espey services include design and development to specification, build to print, design services, design studies, environmental testing services, metal fabrication, painting services, and development of automatic testing equipment. Espey is vertically integrated, meaning that the Company produces individual components (including inductors), populates printed circuit boards, fabricates metalwork, paints, wires, qualifies, and fully tests items, mechanically, electrically and environmentally, in house. Portions of the manufacturing process are subcontracted to vendors from time to time.

In the fiscal years ended June 30, 2013 and 2012, the Company's total sales were \$34,298,210 and \$32,037,357, respectively. Sales to three customers accounted for 33%, 18% and 12% of total sales in 2013. Sales to two customers accounted for 37% and 23% of total sales in 2012. A loss of a significant customer would negatively impact the financial performance of the Company.

Export sales in 2013 and 2012 were approximately \$2,671,000 and \$5,085,000, respectively. This decrease is primarily due to one large customer specific transmitter shipment in fiscal 2012.

Sources of Raw Materials

The Company has never experienced any significant delay or shortage with respect to the purchase of raw materials and components used in the manufacture of its products, and has at least two potential sources of supply for a majority of its raw materials. However, certain components used in our products are available from only a limited number of sources, and other components are only available from a single source. Despite the risk associated with limited or single source suppliers, the benefits of higher quality goods and timely delivery minimize and often limit any potential risk and can eliminate problems with part failures during production.

Sales Backlog

At September 10, 2013, the Company's backlog was approximately \$40.5 million. The total backlog at June 30, 2013 was approximately \$42.1 million compared to approximately \$50.8 million at June 30, 2012. The Company's total backlog represents the estimated remaining sales value of work to be performed under firm contracts. The funded portion of this backlog at June 30, 2013 is approximately \$42.0 million. This includes items that have been authorized and appropriated by Congress and/or funded by the customer. The unfunded backlog is approximately \$114,000 and represents firm multi-year orders for which funding has not yet been appropriated by Congress or funded by our customer. While there is no guarantee that future budgets and appropriations will provide funding for a given program, management has included in unfunded backlog only those programs that it believes are likely to receive funding based on discussions with customers and program status. The unfunded backlog at June 30, 2012 was \$2.3 million. The Company's backlog and risks associated with government contracts is discussed in greater detail in Management's Discussion and Analysis of Financial Condition and Results of Operations, contained in Item 7 below.

It is presently anticipated that a minimum of \$27 million of orders comprising the June 30, 2013 backlog will be filled during the fiscal year ending June 30, 2014. The minimum of \$27 million does not include any shipments, which may be made against orders subsequently received during the fiscal year ending June 30, 2014. The estimate of the June 30, 2013 backlog to be shipped in fiscal 2014 is subject to future events, which may cause the amount of the backlog actually shipped to differ from such estimate.

Marketing and Competition

The Company markets its products primarily through its own direct sales organization. Business is solicited from large industrial manufacturers and defense companies, the government of the United States, foreign governments and major foreign electronic equipment companies. In certain countries the Company has external sales representatives to help solicit and coordinate foreign contracts. Espey is also on the eligible list of contractors with the United States Department of Defense and generally is automatically solicited by Defense Department procurement agencies for their needs falling within the major classes of products produced by the Company. In addition, the Company directly pursues opportunities from the United States Department of Defense for prime contracts. Espey contracts with the Federal Government under cage code 20950 as Espey Mfg. & Electronics Corp. and cage code 98675 as Espey Mfg. & Electronics Corp., Saratoga Industries Division.

There is competition in all classes of products manufactured by the Company from divisions of the largest electronic companies, as well as many small companies. The Company's sales do not represent a significant share of the industry's market for any class of its products. The principal methods of competition for electronic products of both a military and industrial nature include, among other factors, price, product performance, the experience of the particular company and history of its dealings in such products. The Company, as well as other companies engaged in supplying equipment for military use, is subject to various risks, including, without limitation, dependence on United States and foreign government appropriations and program allocations, the competition for available military business, and government termination of orders for convenience.

Our business is not seasonal. However, the concentration of our business in equipment for military applications exposes us to on-going associated risks including, without limitation, dependence on appropriations from the United States Government and the governments of foreign nations, program allocations, and the potential of governmental termination of orders for convenience.

The unresolved process for addressing the U.S's fiscal imbalances is a risk to the company. This risk is not unique to Espey and is in fact common to all defense contractors. The Congressional sequestration established a level of uncertainty associated with large-scale across-the-board defense cuts and has caused delays in program management including the processing of new orders and requests for proposals associated with new procurement.

In addition to the defense spending cuts associated with the Federal budget sequestration, we have experienced new incidents of competition. Based upon discussions during contract negotiations with our major customers, we believe that many of our competitors are aggressively investing in upfront product design costs and lowering profit margins as a strategic means of maintaining existing business and enhancing market share at the expense of competing contractors. This change in the market place has put pressure on the pricing of our current products and will likely result in lower margins on some of our legacy business. In order to compete effectively for new business, we may similarly need to invest in upfront design costs, thereby reducing initial profitability as a means of procuring new long-term programs. Accordingly, we have adjusted our pricing strategy in order to achieve a balance which enables us both to retain repeat programs while being more competitive in bidding on new programs.

Research and Development

The Company's expenditures for research and development were approximately \$60,597 and \$139,576 in fiscal 2013 and 2012, respectively. Some of the Company's engineers and technicians spend varying degrees of time on either development of new products or improvements of existing products. A majority of these expenditures relate to research that is required by Espey engineers to support a request for a quotation from a customer having a product-specific custom need usually associated with stringent size and weight requirements.

Employees

The Company had 173 employees as of September 12, 2013. Approximately 40% of these employees are represented by the International Brotherhood of Electrical Workers Local #1799. A new collective bargaining agreement was approved in July 2012. The three-year agreement expires on June 30, 2015. Relations with the Union are considered good.

Government Regulations

Compliance with federal, state and local laws regulating the discharge of materials into the environment, or otherwise relating to the protection of the environment, did not in fiscal year 2013, and the Company believes will not in fiscal year 2014, have a material effect upon the capital expenditures, net income, or competitive position of the Company.

The Company's U.S. Government contract and subcontract orders are funded by government budgets, which operate on an October-to-September fiscal year. Normally, in February of each year, the President of the United States presents to Congress a proposed budget for the upcoming fiscal year. This budget includes recommended appropriations for every Federal agency and is the result of months of policy and program reviews throughout the executive branch. From February through September of each year, the appropriations and authorization committees of Congress review the President's budget proposals and establish the funding levels for the upcoming fiscal year in appropriations and authorization legislation. Once these levels are enacted into law, the Executive Office of the President administers the funds to the agencies.

There are two primary risks associated with this process. First, the process may be delayed or disrupted because of congressional schedules, negotiations over funding levels for programs or unforeseen world events, which could, in turn, alter the funding for a program or contract. Second, funding for multi-year contracts can be changed by future appropriations, which could affect the timing of funds, schedules and program content.

Also, our international sales are denominated in United States currency. Consequently, changes in exchange rates that strengthen the United States dollar could increase the price in local currencies of our products in foreign markets and make our products relatively more expensive than competitors' products.

U.S. Government Defense Contracts and Subcontracts

Generally, U.S. Government contracts are subject to procurement laws and regulations. Some of the Company's contracts are governed by the Federal Acquisition Regulation (FAR), which lays out uniform policies and procedures for acquiring goods and services by the U.S. Government, and agency-specific acquisition regulations that implement or supplement the FAR. For example, the Department of Defense implements the FAR through the Defense Federal Acquisition Regulation (DFAR).

The FAR also contains guidelines and regulations for managing a contract after award, including conditions under which contracts may be terminated, in whole or in part, at the government's convenience or for default. If a contract is terminated for the convenience of the government, a contractor is entitled to receive payments for its allowable costs and, in general, the proportionate share of fees or earnings for the work done. If a contract is terminated for default, the government generally pays for only the work it has accepted. These regulations also subject the Company to financial audits and other reviews by the government of its costs, performance, accounting and general business practices relating to its contracts, which may result in adjustment of the Company's contract-related costs and fees.

Item 2. Property

The Company's entire operation, including administrative, manufacturing and engineering facilities, is located in Saratoga Springs, New York.

The Saratoga Springs plant, which the Company owns, consists of various adjoining one-story buildings on a 22 acre site, approximately eight acres of which is unimproved. The property is not subject to mortgage indebtedness or any other material encumbrance. The plant has a sprinkler system throughout and contains approximately 151,000 square feet of floor space, of which 90,000 is used for manufacturing, 24,000 for engineering, 33,000 for shipping and climatically secured storage, and 4,000 for offices. The offices, engineering and some manufacturing areas are

air-conditioned. In addition to assembly and wiring operations, the plant includes facilities for varnishing, potting, impregnation and spray-painting operations. The manufacturing operation also includes a complete machine shop, with welding and sheet metal fabrication facilities adequate for substantially all of the Company's current operations. Besides normal test equipment, the Company maintains a sophisticated on-site environmental test facility. In addition to meeting all of the Company's in-house needs, the machine shop and environmental facilities are available to other companies on a contract basis.

Item 3. Legal Proceedings None

Item 4. Mine Safety Disclosures Not applicable

PART II

Item 5. Market for the Registrant's Common Equity and Related Stockholder Matters and Issuer Purchases of Equity Securities

Price Range of Common Stock

The table below shows the range of high and low prices for the Company's common stock on the NYSE MKT (symbol "ESP"), the principal market for trading in the common stock, for each quarterly period for the last two fiscal years ended June 30:

2013	High	Low
First Quarter	\$31.00	\$22.03
Second Quarter	27.98	22.87
Third Quarter	26.94	24.26
Fourth Quarter	26.49	24.09
2012		
First Quarter	\$27.00	\$19.40
Second Quarter	25.54	19.80
Third Quarter	25.55	22.00
Fourth Quarter	27.10	24.42
Holders		

The approximate number of holders of record of the common stock was 91 on September 12, 2013 according to records of the Company's transfer agent. Included in this number are shares held in "nominee" or "street" name and, therefore, the number of beneficial owners of the common stock is believed to be substantially in excess of the foregoing number.

Dividends

The Company paid cash dividends on common stock of \$1.975 per share for the fiscal years ended June 30, 2013 and \$1.90 per share for the fiscal years ended June 30, 2012, which included a special dividend of \$1.00 per share during each such fiscal year. The Board of Directors has authorized the payment of a fiscal 2014 first quarter dividend of \$.25 payable September 27, 2013 to shareholders of record on September 10, 2013. Our Board of Directors assesses the Company's dividend policy periodically and we anticipate that regular quarterly dividends will be paid for the foreseeable future. There is no assurance, however, that the Board of Directors will increase the amount of the regular cash dividend during the fiscal year ending June 30, 2014 or any future years. Moreover, there is no assurance that the Board of Directors will declare a special dividend during fiscal year 2014 or in future years. Typically, the Board will assess whether a special dividend is warranted in the latter part of the second fiscal quarter based upon the Company's cash position, anticipated future sales during the fiscal year and the sales backlog.

During fiscal 2013, the Company sold common stock to certain employees and directors as they exercised existing stock options granted under a shareholder approved plan. During the year, 27,300 shares were sold at prices that ranged from \$17.09 a share to \$21.54 a share. The securities were sold for cash. Proceeds are used for general working capital purposes.

The Company did not make any open market purchases of equity securities in the fiscal 2013 fourth quarter.

The following table sets forth information as of June 30, 2013 with respect to compensation plans under which equity securities of the Company may be issued.

Equity Compensation Plan Information

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations Business Outlook

Management expects revenues in fiscal 2014 to be less than fiscal year 2013 revenues. Expectations are for product mix and margins to remain favorable for fiscal year 2014. During fiscal 2013 new orders received by the Company were approximately \$26.1 million. The order backlog of approximately \$42.1 million at June 30, 2013 gives the Company a solid base of future sales. It is presently anticipated that a minimum of \$27 million of orders comprising the June 30, 2013 backlog will be filled during the fiscal year ending June 30, 2014. The minimum of \$27 million does not include any shipments, which may be made against orders subsequently received during the fiscal year ending June 30, 2014. See discussions below for further detail on the customer mix included in the backlog.

In addition to the backlog, the Company currently has outstanding opportunities representing in excess of \$56 million in the aggregate for both repeat and new programs. The outstanding quotations encompass various new and previously manufactured power supplies, transformers, and subassemblies. However, there can be no assurance that the Company will acquire any or all of the anticipated orders described above, many of which are subject to allocations of the United States defense spending and factors affecting the defense industry and military procurement generally.

Three significant customers represented 63% of the Company's total sales in fiscal 2013 and two significant customers represented 60% of the Company's total sales in fiscal 2012. These sales are in connection with multiyear programs in which the Company is a significant subcontractor. The June 30, 2013 backlog of \$42.1 million includes orders from two customers that represent 57% and 11% of the total backlog. A loss of one of these customers or programs related to these customers could significantly impact the Company. Historically, a small number of customers have accounted for a large percentage of the Company's total sales in any given fiscal year. For several years, management has pursued opportunities with current and new customers with an overall objective of lowering the concentration of sales, mitigating excessive reliance upon a single major product of a particular program and minimizing the impact of the loss of a single significant customer. Management continues to evaluate its business development functions and potential revised courses of action in order to diversify its customer base. The Company currently has a very high concentration level with two customers and this presents significant risk.

Management, along with the Board of Directors, continues to evaluate the need and use of the Company's working capital. Capital expenditures are expected to be approximately \$800,000 for fiscal 2014. Expectations are that the working capital will be required to fund orders, dividend payments, and general operations of the business. From time to time, management along with the Mergers and Acquisitions Committee of the Board of Directors examine opportunities involving acquisitions or other strategic options, including buying certain products or product lines. The criteria for consideration are synergies with the Company's existing product base and accretion to earnings.

Results of Operations

Net sales for fiscal years ended June 30, 2013 and 2012, were \$34,298,210 and \$32,037,357, respectively, a 7% increase. This increase can be attributed to the contract specific nature of the Company's business and the timing of deliveries on these contracts. More specifically, engineering sales increased by approximately \$3.1 million while shipments of transformers and spare parts increased by approximately \$1.2 million each.

For the fiscal years ended June 30, 2013 and 2012 gross profits were \$10,699,569 and \$8,820,163, respectively. Gross profit as a percentage of sales increased to 31.2% for fiscal 2013, up from 27.5% in fiscal 2012. The primary factor in determining gross profit and net income is product mix. The gross profits on mature products and build to print contracts are higher as compared to products that are still in the engineering development stage or in the early stages of production. In any given accounting period the mix of product shipments between higher margin mature programs and less mature programs including loss contracts, has a significant impact on gross profit and net income. The

increased gross profit in fiscal 2013 as compared to fiscal 2012 was primarily the result of an increased sales backlog for both engineering and production with a favorable product mix, offset by the impact of investments in future programs.

Selling, general and administrative expenses were \$2,917,140 for the fiscal year ended June 30, 2013, an increase of \$88,731, or 3% as compared to the prior year. The increase for fiscal 2013 relates primarily to increases in salary and employee related expenses.

Employment of full time equivalents at June 30, 2013 was 170 people compared with 165 people at June 30, 2012.

Other income remained consistent for the fiscal years ended June 30, 2013 and 2012 was \$83,758 and \$89,702, respectively.

The effective income tax rate was 29.3% in fiscal 2013 and 27.8% in fiscal 2012. The effective tax rate is less than the statutory tax rate mainly due to the benefit the Company receives on its "qualified production activities" under The American Jobs Creation Act of 2004 and the benefit derived from the dividends paid on allocated ESOP shares.

Net income for fiscal 2013, was \$5,562,425 or \$2.52 and \$2.48 per share, basic and diluted, respectively, compared to net income of \$4,390,268 or \$2.02 and \$1.99 per share, basic and diluted, respectively, for fiscal 2012. The increase in net income per share was primarily due to higher sales, higher gross profit on sales, offset slightly by higher selling, general and administrative expenses.

Liquidity and Capital Resources

The Company's working capital is an appropriate indicator of the liquidity of its business, and during the past two fiscal years, the Company, when possible, has funded all of its operations with cash flows resulting from operating activities and when necessary from its existing cash and investments. The Company did not borrow any funds during the last two fiscal years.

The Company's working capital as of June 30, 2013 and 2012 was \$29,591,453 and \$27,199,385, respectively. During the three months ended June 30, 2013 and 2012 the Company did not repurchase any shares of its common stock. During the fiscal years ended June 30, 2013 and 2012 the Company repurchased 5,753 and 6,269 shares, respectively, of its common stock from the Company's Employee Retirement Plan and Trust ("ESOP") and in other open market transactions, for a total purchase price of \$150,020 and \$143,731, respectively. Under existing authorizations from the Company's Board of Directors, as of June 30, 2013, management is authorized to purchase an additional \$1,706,248 million of Company stock.

The table below presents the summary of cash flow information for the fiscal year indicated:

Net cash provided by operating activities \$3,285,630 \$7,386,326

Net cash used in investing activities (990,225) (1,463,276)

Net cash used in financing activities (3,930,201) (4,095,437)

Net cash provided by operating activities fluctuates between periods primarily as a result of differences in net income, level of sales, the timing of the collection of accounts receivable, purchase of inventory and payments of accounts payable. Net cash used in investing activities decreased in fiscal 2013 due to an increase in purchases of investment securities offset by an increase in proceeds from maturity of investment securities. The decrease in cash used in financing activities is due primarily to an increase in the proceeds from the exercise of stock options.

The Company currently believes that the cash flow generated from operations and when necessary, from cash and cash equivalents will be sufficient to meet its long-term funding requirements for the foreseeable future.

Management believes that the Company's reserve for bad debts of \$3,000 is adequate given the customers with whom the Company does business. Historically, bad debt expense has been minimal.

During fiscal year 2013 and fiscal 2012, the Company expended \$322,507 and \$267,983, respectively, for plant improvements and new equipment. The Company has budgeted approximately \$800,000 for new equipment and plant improvements in fiscal 2014. Management anticipates that the funds required will be available from current operations.

Critical Accounting Policies and Estimates

Our significant accounting policies are described in note 2 to the financial statements. We believe our most critical accounting policies include revenue recognition and cost estimation on our contracts.

Revenue Recognition and Estimates

A significant portion of our business is comprised of development and production contracts. Generally revenues on long-term fixed-price contracts are recorded on a percentage of completion basis using units of delivery as the measurement basis for progress toward completion.

Percentage of completion accounting requires judgment relative to expected sales, estimating costs and making assumptions related to technical issues and delivery schedules. Contract costs include material, subcontract costs, labor and an allocation of overhead costs. The estimation of cost at completion of a contract is subject to numerous variables involving contract costs and estimates as to the length of time to complete the contract. Given the significance of the estimation processes and judgments described above, it is possible that materially different amounts of expected sales and contract costs could be recorded if different assumptions were used, based on changes in circumstances, in the estimation process. When a change in expected sales value or estimated cost is determined, changes are reflected in current period earnings.

Item 8.	Financial	Statements	and S	Supplemen	ntary Data	

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and

Stockholders of Espey Mfg. & Electronics Corp.

We have audited the accompanying balance sheets of Espey Mfg. & Electronics Corp. as of June 30, 2013 and 2012, and the related statements of comprehensive income, changes in stockholders' equity, and cash flows for each of the years in the two-year period ended June 30, 2013. Espey Mfg. & Electronics Corp.'s management is responsible for these financial statements. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audit included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of Espey Mfg. & Electronics Corp. as of June 30, 2013 and 2012, and the results of its operations and its cash flows for each of the years in the two-year period ended June 30, 2013 in conformity with accounting principles generally accepted in the United States of America.
