CVR ENERGY, INC. AND SUBSIDIARIES

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

September 30, 2008

(unaudited)

(1) Organization and History of the Company and Basis of Presentation

Organization

The Company or CVR may be used to refer to CVR Energy, Inc. and, unless the context otherwise requires, its subsidiaries. Any references to the Company as of a date after June 24, 2005 and prior to October 16, 2007 (the date of the restructuring as further discussed in this note) are to Coffeyville Acquisition LLC (CALLC) and its subsidiaries.

The Company, through its wholly-owned subsidiaries, acts as an independent petroleum refiner and marketer of high value transportation fuels in the mid-continental United States and, through a limited partnership, a producer and marketer of upgraded nitrogen fertilizer products in North America. The Company's operations include two business segments: the petroleum segment and the nitrogen fertilizer segment.

CALLC formed CVR Energy, Inc. as a wholly owned subsidiary, incorporated in Delaware in September 2006, in order to effect an initial public offering. The initial public offering of CVR was consummated on October 26, 2007. In conjunction with the initial public offering, a restructuring occurred in which CVR became a direct or indirect owner of all of the subsidiaries of CALLC. Additionally, in connection with the initial public offering, CALLC was split into two entities: Coffeyville Acquisition LLC and Coffeyville Acquisition II LLC (CALLC II).

Initial Public Offering of CVR Energy, Inc.

On October 26, 2007, CVR Energy, Inc. completed an initial public offering of 23,000,000 shares of its common stock. The initial public offering price was \$19.00 per share.

The net proceeds to CVR from the initial public offering were approximately \$408.5 million, after deducting underwriting discounts and commissions, but before deduction of other offering expenses. The Company also incurred approximately \$11.4 million of other costs related to the initial public offering. The net proceeds from this offering were used to repay \$280.0 million of term debt under the Company's credit facility and to repay all indebtedness under the Company's \$25.0 million unsecured facility and \$25.0 million secured facility, including related accrued interest through the date of repayment of approximately \$5.9 million. Additionally, \$50.0 million of net proceeds were used to repay outstanding revolving loan indebtedness under the Company's credit facility. The balance of the net proceeds received were used for general corporate purposes.

In connection with the initial public offering, CVR became the indirect owner of the subsidiaries of CALLC and CALLC II. This was accomplished by CVR issuing 62,866,720 shares of its common stock to CALLC and CALLC II, its majority stockholders, in conjunction with the 628,667.20 for 1 stock split of CVR's common stock and the mergers of two newly formed direct subsidiaries of CVR into Coffeyville Refining & Marketing Holdings, Inc. (Refining Holdco) and Coffeyville Nitrogen Fertilizers, Inc. (CNF). Concurrent with the merger of the subsidiaries and in accordance with a previously executed agreement, the Company's chief executive officer received 247,471 shares of CVR common stock in exchange for shares that he owned of Refining Holdco and CNF. The shares were fully vested and were exchanged at fair market value.

The Company also issued 27,100 shares of common stock to its employees on October 24, 2007 in connection with the initial public offering. Immediately following the completion of the offering, there were 86,141,291 shares of common stock outstanding, which does not include the non-vested shares noted below.

On October 24, 2007, 17,500 shares of non-vested common stock having a value of \$365,000 at the date of grant were issued to outside directors. Although ownership of the shares does not transfer to the recipients until the shares have vested, recipients have dividend and voting rights with respect to these shares from the date of grant. The fair value of each share of non-vested common stock was measured based on the market price of the common stock as of the date of grant and is being amortized over the respective vesting periods. One-third of the non-vested

Table of Contents

CVR ENERGY, INC. AND SUBSIDIARIES

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

award vested on October 24, 2008, one-third will vest on October 24, 2009, and the final one-third will vest on October 24, 2010.

Options to purchase 10,300 shares of common stock at an exercise price of \$19.00 per share were granted to outside directors on October 22, 2007. These awards vest over a three year service period. Fair value was measured using an option-pricing model at the date of grant.

Nitrogen Fertilizer Limited Partnership

In conjunction with the consummation of CVR's initial public offering, CVR transferred Coffeyville Resources Nitrogen Fertilizer, LLC (CRNF), its nitrogen fertilizer business, to CVR Partners, LP (the Partnership), a newly created limited partnership, in exchange for a managing general partner interest (managing GP interest), a special general partner interest (special GP interest, represented by special GP units) and a de minimis limited partner interest (LP interest, represented by special LP units). This transfer was not considered a business combination as it was a transfer of assets among entities under common control and, accordingly, balances were transferred at their historical cost. CVR concurrently sold the managing GP interest to Coffeyville Acquisition III LLC (CALLC III), an entity owned by CVR's controlling stockholders and senior management, at fair market value. The board of directors of CVR determined, after consultation with management, that the fair market value of the managing general partner interest was \$10.6 million. This interest has been reflected as minority interest in the Consolidated Balance Sheet.

CVR owns all of the interests in the Partnership (other than the managing general partner interest and the associated incentive distribution rights (IDRs)) and is entitled to all cash distributed by the Partnership. The managing general partner is not entitled to participate in Partnership distributions except with respect to its IDRs, which entitle the managing general partner to receive increasing percentages (up to 48%) of the cash the Partnership distributes in excess of \$0.4313 per unit in a quarter. However, the Partnership is not permitted to make any distributions with respect to the IDRs until the aggregate Adjusted Operating Surplus, as defined in the amended and restated partnership agreement, generated by the Partnership through December 31, 2009 has been distributed in respect of the units held by CVR and any common units issued by the Partnership if it elects to pursue an initial public offering. In addition, the Partnership and its subsidiaries are currently guarantors under the credit facility of Coffeyville Resources, LLC (CRLLC), a wholly-owned subsidiary of CVR. There will be no distributions paid with respect to the IDRs for so long as the Partnership or its subsidiaries are guarantors under the credit facility.

The Partnership is operated by CVR's senior management pursuant to a services agreement among CVR, the managing general partner, and the Partnership. The Partnership is managed by the managing general partner and, to the extent described below, CVR, as special general partner. As special general partner of the Partnership, CVR has joint management rights regarding the appointment, termination, and compensation of the chief executive officer and chief financial officer of the managing general partner, has the right to designate two members of the board of directors of the managing general partner, and has joint management rights regarding specified major business decisions relating to the Partnership. CVR, the Partnership, the managing general partner and various of their subsidiaries also entered into a number of agreements to regulate certain business relations between the parties.

At September 30, 2008, the Partnership had 30,333 special LP units outstanding, representing 0.1% of the total Partnership units outstanding, and 30,303,000 special GP interests outstanding, representing 99.9% of the total Partnership units outstanding. In addition, the managing general partner owned the managing general partner interest

and the IDRs. The managing general partner contributed assets into the Partnership in exchange for its managing general partner interest and the IDRs.

In accordance with the Contribution, Conveyance, and Assumption Agreement, by and between the Partnership and the partners, dated as of October 24, 2007, if an initial private or public offering of the Partnership is not consummated by October 24, 2009, the managing general partner of the Partnership can require the Company to purchase the managing GP interest. This put right expires on the earlier of (1) October 24, 2012 or (2) the closing of

Table of Contents

CVR ENERGY, INC. AND SUBSIDIARIES

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

the Partnership's initial private or public offering. If the Partnership's initial private or public offering is not consummated by October 24, 2012, the Company has the right to require the managing general partner to sell the managing GP interest to the Company. This call right expires on the closing of the Partnership's initial private or public offering. In the event of an exercise of a put right or a call right, the purchase price will be the fair market value of the managing GP interest at the time of the purchase determined by an independent investment banking firm selected by the Company and the managing general partner.

On February 28, 2008, the Partnership filed a registration statement with the Securities and Exchange Commission (SEC) to effect an initial public offering of its common units representing limited partner interests. On June 13, 2008, the Company announced that the managing general partner of the Partnership had decided to postpone, indefinitely, the Partnership's initial public offering due to then-existing market conditions for master limited partnerships. The Partnership, subsequently, withdrew the registration statement.

As of September 30, 2008, the Partnership had distributed \$50.0 million to CVR.

Basis of Presentation

The accompanying unaudited condensed consolidated financial statements were prepared in accordance with U.S. generally accepted accounting principles (GAAP) and in accordance with the rules and regulations of the SEC. The consolidated financial statements include the accounts of CVR Energy, Inc. and its majority-owned direct and indirect subsidiaries. The ownership interests of minority investors in its subsidiaries are recorded as minority interest. All intercompany accounts and transactions have been eliminated in consolidation. Certain information and footnotes required for the complete financial statements under GAAP have been condensed or omitted pursuant to such rules and regulations. These unaudited condensed consolidated financial statements should be read in conjunction with the December 31, 2007 audited consolidated financial statements and notes thereto included in CVR's Annual Report on Form 10-K/A for the year ended December 31, 2007.

In the opinion of the Company's management, the accompanying unaudited condensed consolidated financial statements reflect all adjustments (consisting only of normal recurring adjustments) that are necessary to fairly present the financial position of the Company as of September 30, 2008 and December 31, 2007, the results of operations for the three and nine months ended September 30, 2008 and 2007, and the cash flows for the nine months ended September 30, 2008 and 2007.

Results of operations and cash flows for the interim periods presented are not necessarily indicative of the results that will be realized for the year ending December 31, 2008 or any other interim period. The preparation of financial statements in conformity with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, and the disclosure of contingent assets and liabilities. Actual results could differ from those estimates.

In connection with CVR's initial public offering, \$4.2 million of deferred offering costs for the nine months ended September 30, 2007 were previously presented in operating activities in the interim financial statements. Such amounts have now been reflected as financing activities for the nine months ended September 30, 2007 in the accompanying Consolidated Statements of Cash Flows. The impact on the prior financial statements of this revision is not considered material.

(2) Restatement of Financial Statements

On April 23, 2008, the Audit Committee of the Board of Directors and management of the Company concluded that the Company's previously issued consolidated financial statements for the year ended December 31, 2007 and the related quarter ended September 30, 2007 contained errors. The Company arrived at this conclusion during the course of its closing process and review for the quarter ended March 31, 2008.

Table of Contents

CVR ENERGY, INC. AND SUBSIDIARIES

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The restatement principally related to errors in the calculation of the cost of crude oil purchased by the Company and associated financial transactions. Accordingly, the Company restated the previously issued financial statements for these periods. Restated financial information, as well as a discussion of the errors and the adjustments made as a result of the restatement, are contained in the Company's amended Annual Report on Form 10K/A for the year ended December 31, 2007. The Company did not amend the Company's previously filed Quarterly Report on Form 10-Q for the period ended September 30, 2007.

As a result of the restatement, for the three months ended September 30, 2007, net income decreased by \$2.2 million, from \$13.4 million to \$11.2 million. In addition, for the nine months ended September 30, 2007, net loss increased by \$2.2 million from \$40.9 million to \$43.1 million. These changes resulted from an increase in cost of product sold (exclusive of depreciation and amortization) of \$7.1 million for both periods, with an associated increase in income tax benefit of \$4.9 million for both periods.

Due to the restatement, accounts payable for the quarter ended September 30, 2007 increased by \$7.1 million. Income tax receivable increased by \$3.0 million, current deferred income tax asset increased by \$4.2 million, and long term deferred income tax liability increased by \$2.3 million.

The effect of the above adjustments on the condensed consolidated financial statements is set forth in the tables below. The restatement had no effect on net cash flow from operating, investing, or financing activities as shown in the Consolidated Statements of Cash Flows. The restatement did not have any impact on the Company's covenant compliance under its debt facilities or its cash position as of September 30, 2007.

Notes 11, 12, 16, and 17 have been restated to reflect the adjustments described above.

(3) Recent Accounting Pronouncements

In September 2006, the Financial Accounting Standards Board (FASB) issued Statement on Financial Accounting Standards (SFAS) No. 157, *Fair Value Measurements*, which establishes a framework for measuring

Table of Contents

CVR ENERGY, INC. AND SUBSIDIARIES

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

fair value in GAAP and expands disclosures about fair value measurements. SFAS 157 states that fair value is the price that would be received to sell the asset or paid to transfer the liability (an exit price), not the price that would be paid to acquire the asset or received to assume the liability (an entry price). The standard's provisions for financial assets and financial liabilities, which became effective January 1, 2008, had no material impact on the Company's financial position or results of operations. At September 30, 2008, the only financial assets and financial liabilities that are within the scope of SFAS 157 and measured at fair value on a recurring basis are the Company's derivative instruments. See Note 15, Fair Value Measurements.

In February 2008, the FASB issued FASB Staff Position 157-2 which defers the effective date of SFAS 157 for nonfinancial assets and nonfinancial liabilities, except for items that are recognized or disclosed at fair value in an entity's financial statements on a recurring basis (at least annually). The Company will be required to adopt SFAS 157 for these nonfinancial assets and nonfinancial liabilities as of January 1, 2009. Management believes the adoption of SFAS 157 deferral provisions will not have a material impact on the Company's financial position or earnings.

In March 2008, the FASB issued SFAS No. 161, *Disclosures about Derivative Instruments and Hedging Activities* an amendment of FASB Statement No. 133. This statement will change the disclosure requirements for derivative instruments and hedging activities. Entities are required to provide enhanced disclosures about how and why an entity uses derivative instruments, how derivative instruments and related hedged items are accounted for under Statement 133 and its related interpretations, and how derivative instruments and related hedged items affect an entity's financial position, net earnings, and cash flows. The Company will be required to adopt this statement as of January 1, 2009. The adoption of SFAS 161 is not expected to have a material impact on the Company's consolidated financial statements.

(4) Share-Based Compensation

Prior to CVR's initial public offering, CVR's subsidiaries were held and operated by CALLC, a limited liability company. Management of CVR holds an equity interest in CALLC. CALLC issued non-voting override units to certain management members who held common units of CALLC. There were no required capital contributions for the override operating units. In connection with CVR's initial public offering in October 2007, CALLC was split into two entities: CALLC and CALLC II. In connection with this split, management's equity interest in CALLC, including both their common units and non-voting override units, was split so that half of management's equity interest was in CALLC and half was in CALLC II. CALLC was historically the primary reporting company and CVR's predecessor. In addition, in connection with the transfer of the managing general partner of the Partnership to CALLC III in October 2007, CALLC III issued non-voting override units to certain management members of CALLC III.

CVR, CALLC, CALLC II and CALLC III account for share-based compensation in accordance with SFAS No. 123(R), *Share-Based Payments* and EITF 00-12, *Accounting by an Investor for Stock-Based Compensation Granted to Employees of an Equity Method Investee*. CVR has recorded non-cash share-based compensation expense from CALLC, CALLC II and CALLC III.

In accordance with SFAS 123(R), CVR, CALLC, CALLC II and CALLC III apply a fair value based measurement method in accounting for share-based compensation. In accordance with EITF 00-12, CVR recognizes the costs of the share-based compensation incurred by CALLC, CALLC II and CALLC III on its behalf, primarily in selling, general, and administrative expenses (exclusive of depreciation and amortization), and a corresponding capital contribution, as

the costs are incurred on its behalf, following the guidance in EITF 96-18, *Accounting for Equity Investments That Are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling Goods or Services*, which requires remeasurement at each reporting period through the performance commitment period, or in CVR's case, through the vesting period. At September 30, 2008, CVR's common stock closing price was utilized to determine the fair value of the override units of CALLC and CALLC II. The estimated fair value per unit reflects a ratio of override units to shares of common stock in correlation with the percentage for

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

which the override units can share in conjunction with the benchmark value. The estimated fair value of the override units of CALLC III has been determined using a probability-weighted expected return method which utilizes CALLC III's cash flow projections, which are representative of the nature of interests held by CALLC III in the Partnership.

The following table provides key information for the share-based compensation plans related to the override units of CALLC, CALLC II, and CALLC III. Compensation expense amounts are disclosed in thousands.

Award Type	Benchmark		Grant Date	*Compensation Expense Increase (Decrease) for the Three Months Ended September 30,		*Compensation Expense Increase (Decrease) for the Nine Months Ended September 30,

* As CVR's common stock price increases or decreases compensation expense increases or is reversed in correlation to such increases or decreases in the stock price subject to certain limitations.

Valuation Assumptions

(a) In accordance with SFAS 123(R), using the Monte Carlo method of valuation, the estimated fair value of the override operating units on June 24, 2005 was \$3,605,000. Significant assumptions used in the valuation were as follows:

Grant**Remeasurement**

	Date	Date
Estimated forfeiture rate	None	None
Explicit service period	Based on forfeiture schedule in (b) below	Based on forfeiture schedule in (b) below
Grant date fair value	\$5.16 per share	N/A
September 30, 2008 CVR closing stock price	N/A	\$8.52
September 30, 2008 estimated fair value	N/A	\$17.54 per share
Marketability and minority interest discounts	24% discount	15% discount
Volatility	37%	N/A

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

- (b) In accordance with SFAS 123(R), using a combination of a binomial model and a probability-weighted expected return method which utilized CVR's cash flow projections, the estimated fair value of the override operating units on December 28, 2006 was \$473,000. Significant assumptions used in the valuation were as follows:

	Grant Date	Remeasurement Date
Estimated forfeiture rate	None	None
Explicit service period	Based on forfeiture schedule below	Based on forfeiture schedule below
Grant date fair value	\$8.15 per share	N/A
September 30, 2008 CVR closing stock price	N/A	\$8.52
September 30, 2008 estimated fair value	N/A	\$0 per share
Marketability and minority interest discounts	20% discount	15% discount
Volatility	41%	N/A

On the tenth anniversary of the issuance of override operating units, such units convert into an equivalent number of override value units. Override operating units are forfeited upon termination of employment for cause. In the event of all other terminations of employment, the override operating units are initially subject to forfeiture as follows:

Minimum Period Held	Forfeiture Rate
2 years	75%
3 years	50%
4 years	25%
5 years	0%

- (c) In accordance with SFAS 123(R), using the Monte Carlo method of valuation, the estimated fair value of the override value units on June 24, 2005 was \$4,065,000. Significant assumptions used in the valuation were as follows:

	Grant Date	Remeasurement Date
Estimated forfeiture rate	None	None
Derived service period	6 years	6 years
Grant date fair value	\$2.91 per share	N/A
September 30, 2008 CVR closing stock price	N/A	\$8.52
September 30, 2008 estimated fair value	N/A	\$7.06 per share
Marketability and minority interest discounts	24% discount	15% discount

Volatility

37%

N/A

13

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

- (d) In accordance with SFAS 123(R), using a combination of a binomial model and a probability-weighted expected return method which utilized CVR's cash flow projections, the estimated fair value of the override value units on December 28, 2006 was \$945,000. Significant assumptions used in the valuation were as follows:

	Grant Date	Remeasurement Date
Estimated forfeiture rate	None	None
Derived service period	6 years	6 years
Grant date fair value	\$8.15 per share	N/A
September 30, 2008 CVR closing stock price	N/A	\$8.52
September 30, 2008 estimated fair value	N/A	\$0 per share
Marketability and minority interest discounts	20% discount	15% discount
Volatility	41%	N/A

Unless the compensation committee of the board of directors of CVR takes an action to prevent forfeiture, override value units are forfeited upon termination of employment for any reason except that in the event of termination of employment by reason of death or disability, all override value units are initially subject to forfeiture as follows:

Minimum Period Held	Subject to Forfeiture Percentage
2 years	75%
3 years	50%
4 years	25%
5 years	0%

- (e) In accordance with SFAS 123(R), *Share-Based Compensation*, using a binomial and a probability-weighted expected return method which utilized CALLC III's cash flows projections which includes expected future earnings and the anticipated timing of IDRs, the estimated grant date fair value of the override units was approximately \$3,000. As of September 30, 2008 these units were fully vested. Significant assumptions used in the valuation were as follows:

Estimated forfeiture rate	None
September 30, 2008 estimated fair value	\$0.007 per share
Marketability and minority interest discount	15% discount
Volatility	36.2%

- (f) In accordance with SFAS 123(R), *Share-Based Compensation*, using a probability-weighted expected return method which utilized CALLC III's cash flows projections which includes expected future earnings and the

Edgar Filing: CVR ENERGY INC - Form 10-Q

anticipated timing of IDRs, the estimated grant date fair value of the override units was approximately \$3,000. Of the 642,219 units issued, 109,720 were immediately vested upon issuance and the remaining units are subject to a forfeiture schedule. Significant assumptions used in the valuation were as follows:

Estimated forfeiture rate	None
Derived Service Period	Based on forfeiture schedule
September 30, 2008 estimated fair value	\$3.77 per share
Marketability and minority interest discount	20% discount
Volatility	45.0%

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

At September 30, 2008, assuming no change in the estimated fair value at September 30, 2008, there was approximately \$8.0 million of unrecognized compensation expense related to non-voting override units. This is expected to be recognized over a remaining period of approximately three years as follows (in thousands):

	Override Operating Units	Override Value Units
Three months ending December 31, 2008	\$ 457	\$ 545
Year ending December 31, 2009	1,287	2,164
Year ending December 31, 2010	387	2,164
Year ending December 31, 2011		1,032
	\$ 2,131	\$ 5,905

Phantom Unit Appreciation Plan

The Company, through a wholly-owned subsidiary, has a Phantom Unit Appreciation Plan whereby directors, employees, and service providers may be awarded phantom points at the discretion of the board of directors or the compensation committee. Holders of service phantom points have rights to receive distributions when holders of override operating units receive distributions. Holders of performance phantom points have rights to receive distributions when holders of override value units receive distributions. There are no other rights or guarantees, and the plan expires on July 25, 2015 or at the discretion of the compensation committee of the board of directors. As of September 30, 2008, the issued Profits Interest (combined phantom points and override units) represented 15% of combined common unit interest and Profits Interest of CALLC and CALLC II. The Profits Interest was comprised of 11.1% and 3.9% of override interest and phantom interest, respectively. In accordance with SFAS 123(R), using the September 30, 2008 CVR closing common stock price to determine the Company's equity value, the service phantom interest and performance phantom interest were valued at \$17.54 and \$7.06 per point, respectively. CVR has recorded approximately \$7,984,000 and \$29,217,000 in personnel accruals as of September 30, 2008 and December 31, 2007, respectively. Compensation expense for the three and nine month periods ending September 30, 2008 related to the Phantom Unit Appreciation Plan was reversed by \$(17,977,000) and \$(21,233,000), respectively. Compensation expense for the three and nine month periods ending September 30, 2007 was \$4,062,000 and \$9,641,000, respectively.

At September 30, 2008, assuming no change in the estimated fair value at September 30, 2008, there was approximately \$2.9 million of unrecognized compensation expense related to the Phantom Unit Appreciation Plan. This is expected to be recognized over a remaining period of approximately three years.

Long Term Incentive Plan

CVR has a Long Term Incentive Plan which permits the grant of options, stock appreciation rights, or SARS, non-vested shares, non-vested share units, dividend equivalent rights, share awards and performance awards.

During the quarter there were no forfeitures or vesting of stock options or non-vested shares. On September 24, 2008, options to purchase 9,100 shares of common stock at an exercise price of \$11.01 per share were granted to an outside director upon his election to the Company's board of directors.

As of September 30, 2008, there was approximately \$0.4 million of total unrecognized compensation cost related to non-vested shares to be recognized over a weighted-average period of approximately one year. Compensation expense recorded for the three month periods ending September 30, 2008 and 2007 related to the non-vested common stock and common stock options was \$102,000 and \$0, respectively. Compensation expense recorded for the nine month periods ending September 30, 2008 and 2007 related to the non-vested common stock and common stock options was \$288,000 and \$0, respectively.

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(5) Inventories**

Inventories consist primarily of crude oil, blending stock and components, work in progress, fertilizer products, and refined fuels and by-products. Inventories are valued at the lower of the first-in, first-out (FIFO) cost, or market, for fertilizer products, refined fuels and by-products for all periods presented. Refinery unfinished and finished products inventory values were determined using the ability-to-bare process, whereby raw materials and production costs are allocated to work-in-process and finished products based on their relative fair values. Other inventories, including other raw materials, spare parts, and supplies, are valued at the lower of moving-average cost, which approximates FIFO, or market. The cost of inventories includes inbound freight costs.

Inventories consisted of the following (in thousands):

	September 30, 2008	December 31, 2007
Finished goods	\$ 110,106	\$ 109,394
Raw materials and catalysts	94,164	92,104
In-process inventories	27,304	29,817
Parts and supplies	27,337	23,340
	\$ 258,911	\$ 254,655

(6) Property, Plant, and Equipment

A summary of costs for property, plant, and equipment is as follows (in thousands):

	September 30, 2008	December 31, 2007
Land and improvements	\$ 17,672	\$ 13,058
Buildings	21,955	17,541
Machinery and equipment	1,288,553	1,108,858
Automotive equipment	6,448	5,171
Furniture and fixtures	7,593	6,304
Leasehold improvements	1,169	929
Construction in progress	44,527	182,046
	1,387,917	1,333,907
Accumulated depreciation	202,116	141,733
	\$ 1,185,801	\$ 1,192,174

Capitalized interest recognized as a reduction in interest expense for the three month periods ended September 30, 2008 and September 30, 2007 totaled approximately \$244,000 and \$2,877,000, respectively. Capitalized interest for the nine month periods ended September 30, 2008 and September 30, 2007 totaled approximately \$1,565,000 and \$9,285,000, respectively. Land and buildings that are under a capital lease obligation approximate \$4,827,000.

(7) Planned Major Maintenance Costs

The direct-expense method of accounting is used for planned major maintenance activities. Maintenance costs are recognized as expense when maintenance services are performed. The nitrogen fertilizer plant recently completed a major scheduled turnaround in October 2008. The refinery started a major scheduled turnaround in February 2007 with completion in April 2007. Costs of \$138,000 associated with the 2008 fertilizer plant turnaround were included in direct operating expenses (exclusive of depreciation and amortization) for the three and

Table of Contents

CVR ENERGY, INC. AND SUBSIDIARIES

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

nine months ended September 30, 2008. Costs of \$0 and \$76,754,000 associated with the 2007 refinery turnaround were included in direct operating expenses (exclusive of depreciation and amortization) for the three and nine months ending September 30, 2007, respectively.

(8) Cost Classifications

Cost of product sold (exclusive of depreciation and amortization) includes cost of crude oil, other feedstocks, blendstocks, pet coke expense and freight and distribution expenses. Cost of product sold excludes depreciation and amortization of \$605,000 and \$595,000 for the three months ended September 30, 2008 and September 30, 2007, respectively. For the nine months ended September 30, 2008 and 2007 cost of product sold excludes depreciation and amortization of \$1,816,000 and \$1,791,000, respectively.

Direct operating expenses (exclusive of depreciation and amortization) includes direct costs of labor, maintenance and services, energy and utility costs, environmental compliance costs as well as chemicals and catalysts and other direct operating expenses. Direct operating expenses excludes depreciation and amortization of \$19,486,000 and \$9,582,000 for the three months ended September 30, 2008 and 2007, respectively. For the nine months ended September 30, 2008 and 2007, direct operating expenses excludes depreciation and amortization of \$58,296,000 and \$40,202,000, respectively. Direct operating expenses also exclude depreciation of \$7,627,000 for both the three and nine months ended September 30, 2007 that is included in Net costs associated with the flood on the condensed consolidated statement of operations as a result of assets being idled due to the flood.

Selling, general and administrative expenses (exclusive of depreciation and amortization) consist primarily of legal expenses, treasury, accounting, marketing, human resources and maintaining the corporate offices in Texas and Kansas. Selling, general and administrative expenses excludes depreciation and amortization of \$518,000 and \$304,000 for the three months ended September 30, 2008 and September 30, 2007, respectively. For the nine months ended September 30, 2008 and 2007, selling, general and administrative expenses excludes depreciation and amortization of \$1,212,000 and \$680,000, respectively.

(9) Note Payable and Capital Lease Obligations

The Company entered into an insurance premium finance agreement with Cananwill, Inc. in July 2008 and July 2007 to finance the purchase of its property, liability, cargo and terrorism policies. The original balances of these notes were \$10.0 million and \$7.6 million for 2008 and 2007, respectively. Both notes were to be repaid in equal installments with the final payment due for the 2008 note in June 2009. The balance due for the July 2007 note was paid in full in April 2008. As of September 30, 2008 and December 31, 2007 the Company owed \$10.0 million and \$3.4 million related to these notes.

The Company entered into two capital leases in 2007 to lease platinum required in the manufacturing of new catalyst. The recorded lease obligations fluctuate with the platinum market price. The leases terminate on the date an equal amount of platinum is returned to each lessor, with the difference to be paid in cash. One lease was settled and terminated in January 2008. At September 30, 2008 and December 31, 2007 the lease obligations were recorded at approximately \$1.1 million and \$8.2 million on the Consolidated Balance Sheets, respectively.

The Company also entered into a capital lease for real property used for corporate purposes on May 29, 2008. The lease has an initial lease term of one year with an option to renew for three additional one-year periods. The Company has the option to purchase the property during the initial lease term or during the renewal periods if the lease is renewed. In connection with the capital lease the Company recorded a capital asset and capital lease obligation of \$4.8 million. The capital lease obligation was \$4.0 million as of September 30, 2008.

(10) Flood, Crude Oil Discharge and Insurance Related Matters

On June 30, 2007, torrential rains in southeast Kansas caused the Verdigris River to overflow its banks and flood the town of Coffeyville, Kansas. As a result, the Company's refinery and nitrogen fertilizer plant were

Table of Contents

CVR ENERGY, INC. AND SUBSIDIARIES

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

severely flooded, resulting in significant damage to the refinery assets. The nitrogen fertilizer facility also sustained damage, but to a much lesser degree. The Company maintained property damage insurance which included damage caused by a flood, up to \$300 million per occurrence, subject to deductibles and other limitations. The deductible associated with the property damage was \$2.5 million.

Additionally, crude oil was discharged from the Company's refinery on July 1, 2007 due to the short amount of time to shut down and save the refinery in preparation of the flood that occurred on June 30, 2007. The Company maintained insurance policies related to environmental cleanup costs and potential liability to third parties for bodily injury or property damage. The policies were subject to a \$1.0 million self-insured retention.

The Company has submitted voluminous claims information to, and continues to respond to information requests from, the insurers with respect to costs and damages related to the 2007 flood and crude oil discharge. See Note 13, *Commitments and Contingent Liabilities* for additional information regarding environmental and other contingencies relating to the crude oil discharge that occurred on July 1, 2007.

As of September 30, 2008, the Company has recorded total gross costs associated with the repair of and other matters relating to the damage to the Company's facilities and with third party and property damage claims incurred due to the crude oil discharge of approximately \$154.6 million. Total anticipated insurance recoveries of approximately \$104.2 million have been recorded as of September 30, 2008 (of which \$49.5 million had already been received as of September 30, 2008 by the Company from insurance carriers). At September 30, 2008, total accounts receivable from insurance were \$54.7 million. The receivable balance is segregated between current and long-term in the Company's Consolidated Balance Sheet in relation to the nature and classification of the items to be settled. As of September 30, 2008, \$35.4 million of the amounts receivable from insurers were not anticipated to be collected in the next twelve months, and therefore has been classified as a non-current asset.

Management believes the recovery of the receivable from the insurance carriers is probable. While management believes that the Company's property insurance should cover substantially all of the estimated total costs associated with the physical damage to the property, the Company's insurance carriers have cited potential coverage limitations and defenses, which while unlikely to preclude recovery, could do so and are anticipated to delay collection for more than twelve months.

The Company's property insurers have raised a question as to whether the Company's facilities are principally located in Zone A, which was, at the time of the flood, subject to a \$10 million insurance limit for flood, or Zone B, which was, at the time of the flood, subject to a \$300 million insurance limit for flood. The Company has reached an agreement with certain of its property insurers representing approximately 32.5% of its total property coverage for the flood that the facilities are principally located in Zone B and therefore subject to the \$300 million limit for the flood. The remaining property insurers have not, at this time, agreed to this position. In addition, the Company's excess environmental liability insurance carrier has asserted that the pollution liability claims are for cleanup, which is not covered under its policy, rather than for property damage, which is covered to the limits of the policy. While the Company will vigorously contest the excess carrier's position, the Company contends that if that position were upheld, the Company's umbrella Comprehensive General Liability policies would continue to provide coverage for these claims. Each insurer, however, has reserved its rights under various policy exclusions and limitations and has cited potential coverage defenses. On July 10, 2008, the Company filed two lawsuits against certain of its insurance carriers. One lawsuit was filed against the nonsettling property damage insurance carriers, and the second lawsuit was

filed against carriers under the environmental insurance policies. The property insurance lawsuit involved the Zone A/Zone B issue, and the pollution insurance lawsuit involved the cleanup/property damage issue described above. The Company intends to pursue the litigation vigorously. The Company's primary pollution liability carrier has settled with the Company by paying the full \$25.0 million policy limit and has been dismissed from the pollution insurance lawsuit. The \$25.0 million payment from the Company's environmental insurer is included within the \$49.5 million of insurance proceeds at September 30, 2008. Considering the effect of the lawsuits, the Company continues to believe its remaining receivable as of September 30, 2008 of \$54.7 million is probable of recovery.

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

The Company's insurance policies also provide coverage for interruption to the business, including lost profits, and reimbursement for other expenses and costs the Company has incurred relating to the damages and losses suffered for business interruption. This coverage, however, only applies to losses incurred after a business interruption of 45 days. Because the fertilizer plant was restored to operation within this 45-day period and the refinery restarted its last operating unit in 48 days, a substantial portion of the lost profits incurred because of the flood cannot be claimed under insurance. The Company continues to assess its policies to determine how much, if any, of its lost profits after the 45-day period are recoverable. No amounts for recovery of lost profits under the Company's business interruption policy have been recorded in the accompanying consolidated financial statements.

The Company has recorded net pretax costs in total since the occurrence of the flood of approximately \$50.4 million associated with both the flood and related crude oil discharge as discussed in Note 13, Commitments and Contingent Liabilities. This amount is net of anticipated insurance recoveries of \$104.2 million.

Below is a summary of the gross cost associated with the flood and crude oil discharge and reconciliation of the insurance receivable (in millions):

	Total	For the Three Months Ended September 30, 2008	For the Three Months Ended September 30, 2007	For the Nine Months Ended September 30, 2008	For the Nine Months Ended September 30, 2007
Total gross costs incurred	\$ 154.6	\$ 1.0	\$ 128.6	\$ 7.8	\$ 130.7
Total insurance receivable	(104.2)	(1.8)	(96.4)	1.1	(96.4)
Net costs associated with the flood	\$ 50.4	\$ (0.8)	\$ 32.2	\$ 8.9	\$ 34.3
					Receivable Reconciliation
Total insurance receivable					\$ 104.2
Less insurance proceeds received through September 30, 2008					(49.5)
Insurance receivable					\$ 54.7

Although the Company believes that it will recover substantial sums under its insurance policies, the Company is not sure of the ultimate amount or timing of such recovery because of the difficulty inherent in projecting the ultimate resolution of the Company's claims. The difference between what the Company ultimately receives under its insurance policies compared to what has been recorded and described above could be material to the consolidated financial statements.

In 2007, the Company received insurance proceeds of \$10.0 million under its property insurance policy and \$10.0 million under its environmental policies related to recovery of certain costs associated with the crude oil discharge. In the first quarter of 2008, the Company received \$1.5 million under its Builder's Risk Insurance Policy. In the third quarter of 2008, the Company received \$13.0 million under its property insurance policy and \$15.0 million was received from one environmental insurance carrier in settlement of their expected total obligation. In October 2008, the Company through certain wholly-owned subsidiaries submitted an advance payment proof of loss to certain of its insurers for unallocated property damage. The Company expects to receive an advance payment related thereto in the amount of approximately \$10.1 million. As of November 6, 2008, the Company has received \$9.8 million of the \$10.1 million total increasing the total insurance recoveries received from \$49.5 million at September 30, 2008 to \$59.3 million as of November 6, 2008. The Company continues to reserve all rights under all relevant policies. See Note 13, Commitments and Contingent Liabilities for additional information regarding environmental and other contingencies relating to the crude oil discharge that occurred on July 1, 2007.

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(11) Income Taxes**

The Company adopted the provisions of FASB Interpretation No. 48, *Accounting for Uncertain Tax Positions* an interpretation of FASB No. 109 (FIN 48) on January 1, 2007. The adoption of FIN 48 did not affect the Company's financial position or results of operations. The Company does not have any unrecognized tax benefits as of September 30, 2008.

As of September 30, 2008, the Company did not have an accrual for any amounts for interest or penalties related to uncertain tax positions. The Company's accounting policy with respect to interest and penalties related to tax uncertainties is to classify these amounts as income taxes.

CVR and its subsidiaries file U.S. federal and various state income and franchise tax returns. The Company's U.S. federal income tax return for its 2005 tax year is currently under examination. An examination of the Company's 2004 through 2007 Texas franchise recently commenced. The Company has not been subject to any other U.S. federal or state income or franchise tax examinations by taxing authorities with respect to other income and franchise tax returns. The Company's U.S. federal and state tax years subject to examination as of October 31, 2008 are 2005 to 2007.

The Company's effective tax rate for the nine months ended September 30, 2008 and 2007 was 25.1% and 69.3%, respectively, as compared to the Company's combined federal and state expected statutory tax rate of 39.9%. The effective tax rate is lower than the expected statutory tax rate for the nine months ended September 30, 2008 due primarily to federal income tax credits available to small business refiners related to the production of ultra low sulfur diesel fuel and Kansas state incentives generated under the High Performance Incentive Program (HPIP). The annualized effective tax rate in 2008 is lower than 2007 due to the correlation between the amount of credits projected to be generated in each year in relative comparison with the projected pre-tax loss level in 2007 and pre-tax income level in 2008.

(12) Earnings (Loss) Per Share

On October 26, 2007, the Company completed the initial public offering of 23,000,000 shares of its common stock. Also, in connection with the initial public offering, a reorganization of entities under common control was consummated whereby the Company became the indirect owner of the subsidiaries of CALLC and CALLC II and all of their refinery and fertilizer assets. This reorganization was accomplished by the Company issuing 62,866,720 shares of its common stock to CALLC and CALLC II, its majority stockholders, in conjunction with a 628,667.20 for 1 stock split and the merger of two newly formed direct subsidiaries of CVR. Immediately following the completion of the offering, there were 86,141,291 shares of common stock outstanding, excluding non-vested shares issued. See Note 1, Organization and History of the Company and Basis of Presentation.

2008 Earnings Per Share

Earnings per share for the three and nine months ended September 30, 2008 is calculated as noted below.

Three Months Ended**Nine Months Ended**

	September 30, 2008			September 30, 2008		
	Earnings	Shares	Per Share	Earnings	Shares	Per Share
Basic earnings per share	\$ 99,655,000	86,141,291	\$ 1.16	\$ 152,864,000	86,141,291	\$ 1.77
Diluted earnings per share	\$ 99,655,000	86,158,791	\$ 1.16	\$ 152,864,000	86,158,791	\$ 1.77

Outstanding stock options totaling 32,350 common shares were excluded from the diluted earnings per share calculation for the three and nine months ended September 30, 2008 as they were antidilutive.

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)****2007 Earnings (Loss) Per Share**

The computation of basic and diluted loss per share for the three and nine months ended September 30, 2007 is calculated on a pro forma basis assuming the capital structure in place after the completion of the initial public offering was in place for the entire period.

Pro forma earnings (loss) per share for the three and nine months ended September 30, 2007 is calculated as noted below. For the nine months ended September 30, 2007, 17,500 non-vested shares of common stock have been excluded from the calculation of pro forma diluted earnings per share because the inclusion of such common stock equivalents in the number of weighted average shares outstanding would be anti-dilutive:

	For the Three Months Ended September 30, 2007 As Restated() (Unaudited)	For the Nine Months Ended September 30, 2007 As Restated() (Unaudited)
Net income (loss)	\$ 11,206,000	\$ (43,101,000)
Pro forma weighted average shares outstanding:		
Original CVR shares of common stock	100	100
Effect of 628,667.20 to 1 stock split	62,866,620	62,866,620
Issuance of shares of common stock to management in exchange for subsidiary shares	247,471	247,471
Issuance of shares of common stock to employees	27,100	27,100
Issuance of shares of common stock in the initial public offering	23,000,000	23,000,000
Basic weighted average shares outstanding	86,141,291	86,141,291
Dilutive securities issuance of non-vested shares of common stock to board of directors	17,500	
Diluted weighted average shares outstanding	86,158,791	86,141,291
Pro forma basic earnings (loss) per share	\$ 0.13	\$ (0.50)
Pro forma dilutive earnings (loss) per share	\$ 0.13	\$ (0.50)

See Note 2 to condensed consolidated financial statements.

(13) Commitments and Contingent Liabilities

The minimum required payments for the Company's lease agreements and unconditional purchase obligations are as follows (in thousands):

	Operating Leases	Unconditional Purchase Obligations
Three months ending December 31, 2008	\$ 943	\$ 7,455
Year ending December 31, 2009	3,293	28,685
Year ending December 31, 2010	2,169	37,526
Year ending December 31, 2011	950	56,593
Year ending December 31, 2012	198	53,908
Thereafter	11	411,263
	\$ 7,564	\$ 595,430

Table of Contents

CVR ENERGY, INC. AND SUBSIDIARIES

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

The Company leases various equipment, including rail cars, and real properties under long-term operating leases, expiring at various dates. In the normal course of business, the Company also has long-term commitments to purchase services such as natural gas, electricity, water and transportation services. For the three months ended September 30, 2008 and 2007, lease expense totaled \$1,102,000 and \$850,000, respectively. For the nine months ended September 30, 2008 and 2007, lease expense totaled \$3,176,000 and \$2,812,000, respectively. The lease agreements have various remaining terms. Some agreements are renewable, at the Company's option, for additional periods. It is expected, in the ordinary course of business, that leases will be renewed or replaced as they expire.

From time to time, the Company is involved in various lawsuits arising in the normal course of business, including matters such as those described below under "Environmental, Health, and Safety Matters". Liabilities related to such lawsuits are recognized when the related outcome and costs are probable and can be reasonably estimated. It is possible that management's estimates of the outcomes will change within the next year due to uncertainties inherent in litigation and settlement negotiations. In the opinion of management, the ultimate resolution of the Company's litigation matters is not expected to have a material adverse effect on the accompanying consolidated financial statements. There can be no assurance that management's beliefs or opinions with respect to liability for potential litigation matters are accurate.

Crude oil was discharged from the Company's refinery on July 1, 2007 due to the short amount of time available to shut down and secure the refinery in preparation for the flood that occurred on June 30, 2007. In connection with that discharge, the Company received in May 2008 notices of claims from sixteen private claimants under the Oil Pollution Act in aggregate amount of approximately \$4.4 million. In August 2008, those claimants filed suit against the Company in the United States District Court for the District of Kansas in Wichita. The Company believes that the resolution of these claims will not have a material adverse effect on the consolidated financial statements.

As a result of the crude oil discharge that occurred on July 1, 2007, the Company entered into an administrative order on consent (Consent Order) with the Environmental Protection Agency (EPA) on July 10, 2007. As set forth in the Consent Order, the EPA concluded that the discharge of oil from the Company's refinery caused and may continue to cause an imminent and substantial threat to the public health and welfare. Pursuant to the Consent Order, the Company agreed to perform specified remedial actions to respond to the discharge of crude oil from the Company's refinery. The Company substantially completed remediating the damage caused by the crude oil discharge in July 2008 and expects any remaining minor remedial actions to be completed by December 31, 2008. The Company is currently preparing its final report to the EPA to satisfy the final requirement of the Consent Order.

As of September 30, 2008, the total gross costs recorded associated with remediation and third party property damage as a result of the crude oil discharge approximated \$52.9 million. The Company has not estimated or accrued for any potential fines, penalties or claims that may be imposed or brought by regulatory authorities or possible additional damages arising from lawsuits related to the flood as management does not believe any such fines, penalties or lawsuits would be material nor can be estimated.

While the remediation efforts were substantially completed in July 2008, the costs and damages that the Company will ultimately pay may be greater than the amounts described and projected above. Such excess costs and damages could be material to the consolidated financial statements.

The Company is seeking insurance coverage for this release and for the ultimate costs for remediation, property damage claims, resolution of class action lawsuits, and other claims brought by regulatory authorities. Our excess environmental liability insurance carrier has asserted that our pollution liability claims are for cleanup, which is not covered by such policy, rather than for property damage, which is covered to the limits of the policy. While we will vigorously contest the excess carrier's position, we contend that if that position were upheld, our umbrella Comprehensive General Liability policies would continue to provide coverage for these claims. Each insurer, however, has reserved its rights under various policy exclusions and limitations and has cited potential coverage defenses. Although the Company believes that substantial sums under the environmental and liability insurance

Table of Contents

CVR ENERGY, INC. AND SUBSIDIARIES

NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

policies will be recovered, the Company can not be certain of the ultimate amount or timing of such recovery because of the difficulty inherent in projecting the ultimate resolution of the Company's claims. The difference between what the Company receives under its insurance policies compared to what has been recorded and described above could be material to the consolidated financial statements. The Company received \$10.0 million of insurance proceeds under its primary environmental liability insurance policy in 2007 and received an additional \$15.0 million in September 2008 from that carrier, which two payments together constituted full payment to the Company of the primary pollution liability policy limit.

On July 10, 2008, the Company filed two lawsuits in the United States District Court for the District of Kansas against certain of the Company's insurance carriers with regard to the Company's insurance coverage for the flood and crude oil discharge. One of the lawsuits was filed against the insurance carriers under the environmental policies.

Environmental, Health, and Safety (EHS) Matters

CVR is subject to various stringent federal, state, and local EHS rules and regulations. Liabilities related to EHS matters are recognized when the related costs are probable and can be reasonably estimated. Estimates of these costs are based upon currently available facts, existing technology, site-specific costs, and currently enacted laws and regulations. In reporting EHS liabilities, no offset is made for potential recoveries. Such liabilities include estimates of the Company's share of costs attributable to potentially responsible parties which are insolvent or otherwise unable to pay. All liabilities are monitored and adjusted regularly as new facts emerge or changes in law or technology occur.

CVR owns and/or operates manufacturing and ancillary operations at various locations directly related to petroleum refining and distribution and nitrogen fertilizer manufacturing. Therefore, CVR has exposure to potential EHS liabilities related to past and present EHS conditions at some of these locations.

Through Administrative Orders issued under the Resource Conservation and Recovery Act, as amended (RCRA), CVR is a potential party responsible for conducting corrective actions at its Coffeyville, Kansas and Phillipsburg, Kansas facilities. In 2005, CRNF agreed to participate in the State of Kansas Voluntary Cleanup and Property Redevelopment Program (VCPRP) to address a reported release of urea ammonium nitrate (UAN) at the Coffeyville UAN loading rack. As of September 30, 2008 and December 31, 2007, environmental accruals of \$7,079,000 and \$7,646,000, respectively, were reflected in the consolidated balance sheets for probable and estimated costs for remediation of environmental contamination under the RCRA Administrative Order and the VCPRP, including amounts totaling \$2,514,000 and \$2,802,000, respectively, included in other current liabilities. The Company's accruals were determined based on an estimate of payment costs through 2031, which scope of remediation was arranged with the EPA and are discounted at the appropriate risk free rates at September 30, 2008 and December 31, 2007, respectively. The accruals include estimated closure and post-closure costs of \$1,524,000

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

and \$1,549,000 for two landfills at September 30, 2008 and December 31, 2007, respectively. The estimated future payments for these required obligations are as follows (in thousands):

	Amount
Three months ending December 31, 2008	\$ 1,999
Year ending December 31, 2009	687
Year ending December 31, 2010	1,556
Year ending December 31, 2011	313
Year ending December 31, 2012	313
Thereafter	3,282
Undiscounted total	8,150
Less amounts representing interest at 3.51%	1,071
Accrued environmental liabilities at September 30, 2008	\$ 7,079

Management periodically reviews and, as appropriate, revises its environmental accruals. Based on current information and regulatory requirements, management believes that the accruals established for environmental expenditures are adequate.

The EPA has issued regulations intending to limit the amount of sulfur in diesel and gasoline. The EPA has granted the Company's petition for a technical hardship waiver with respect to the date for compliance in meeting the sulfur-lowering standards. CVR spent approximately \$16.8 million in 2007, \$79.0 million in 2006 and \$27.0 million in 2005 to comply with the low-sulfur rules. CVR spent \$10.1 million in the first nine months of 2008 and, based on information currently available, anticipates spending approximately \$6.4 million in the last three months of 2008, \$41.6 million in 2009, and \$5.0 million in 2010 to comply with the low-sulfur rules. The entire amounts are expected to be capitalized.

Environmental expenditures are capitalized when such expenditures are expected to result in future economic benefits. For the three month periods ended September 30, 2008 and 2007, capital expenditures were \$5,481,000 and \$16,195,000, respectively. For the nine month periods ended September 30, 2008 and 2007, capital expenditures were \$34,842,000 and \$102,775,000, respectively. These expenditures were incurred to improve the environmental compliance and efficiency of the operations.

CVR believes it is in substantial compliance with existing EHS rules and regulations. There can be no assurance that the EHS matters described above or other EHS matters which may develop in the future will not have a material adverse effect on the Company's business, financial condition, or results of operations.

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(14) Derivative Financial Instruments**

Gain (loss) on derivatives, net consisted of the following (in thousands):

CVR is subject to crude oil and finished goods price fluctuations caused by supply and demand conditions, weather, economic conditions, and other factors. To manage this price risk on crude oil and other inventories and to fix margins on certain future production, CVR may enter into various derivative transactions. In addition, CALLC, as further described below, entered into certain commodity derivative contracts. CVR is also subject to interest rate fluctuations. To manage interest rate risk and to meet the requirements of the credit agreements CALLC entered into an interest rate swap, as further described below as required by the long-term debt agreements.

CVR has adopted SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*. SFAS 133 imposes extensive record-keeping requirements in order to designate a derivative financial instrument as a hedge. CVR holds derivative instruments, such as exchange-traded crude oil futures, certain over-the-counter forward swap agreements and interest rate swap agreements, which it believes provide an economic hedge on future transactions, but such instruments are not designated as hedges. Gains or losses related to the change in fair value and periodic settlements of these derivative instruments are classified as loss on derivatives, net in the Consolidated Statements of Operations. For the purposes of segment reporting, realized and unrealized gains or losses related to the commodity derivative contracts are reported in the Petroleum Segment.

Cash Flow Swap

At September 30, 2008, CVR's Petroleum Segment held commodity derivative contracts (swap agreements) for the period from July 1, 2005 to June 30, 2010 with a related party (see Note 16, *Related Party Transactions*). The swap agreements were originally executed by CALLC on June 16, 2005 and were required under the terms of the Company's long-term debt agreement. The notional quantities on the date of execution were 100,911,000 barrels of crude oil, 1,889,459,250 gallons of heating oil and 2,348,802,750 gallons of unleaded gasoline. The swap agreements were executed at the prevailing market rate at the time of execution. At September 30, 2008 the notional open

amounts under the swap agreements were 23,883,250 barrels of crude oil, 501,548,250 gallons of heating oil and 501,548,250 gallons of unleaded gasoline.

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)*****Interest Rate Swap***

At September 30, 2008, CRLLC held derivative contracts known as interest rate swap agreements that converted CRLLC's floating-rate bank debt into 4.195% fixed-rate debt on a notional amount of \$250,000,000. Half of the agreements are held with a related party (as described in Note 16, "Related Party Transactions"), and the other half are held with a financial institution that is a lender under CRLLC's long-term debt agreement. The swap agreements carry the following terms:

Period Covered	Notional Amount	Fixed Interest Rate
March 31, 2008 to March 30, 2009	\$ 250 million	4.195%
March 31, 2009 to March 30, 2010	180 million	4.195%
March 31, 2010 to June 30, 2010	110 million	4.195%

CVR pays the fixed rates listed above and receives a floating rate based on three-month LIBOR rates, with payments calculated on the notional amounts listed above. The notional amounts do not represent actual amounts exchanged by the parties but instead represent the amounts on which the contracts are based. The swap is settled quarterly and marked-to-market at each reporting date, and all unrealized gains and losses are currently recognized in income. Transactions related to the interest rate swap agreements were not allocated to the Petroleum or Nitrogen Fertilizer segments.

(15) Fair Value Measurements

In September 2006, the FASB issued SFAS No. 157, *Fair Value Measurements*. This statement established a single authoritative definition of fair value when accounting rules require the use of fair value, set out a framework for measuring fair value, and required additional disclosures about fair value measurements. SFAS 157 clarifies that fair value is an exit price, representing the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants.

The Company adopted SFAS 157 on January 1, 2008 with the exception of nonfinancial assets and nonfinancial liabilities that were deferred by FASB Staff Position 157-2 as discussed in Note 3 to the Condensed Consolidated Financial Statements. As of September 30, 2008, the Company has not applied SFAS 157 to goodwill and intangible assets in accordance with FASB Staff Position 157-2.

SFAS 157 discusses valuation techniques, such as the market approach (prices and other relevant information generated by market conditions involving identical or comparable assets or liabilities), the income approach (techniques to convert future amounts to single present amounts based on market expectations including present value techniques and option-pricing), and the cost approach (amount that would be required to replace the service capacity of an asset which is often referred to as replacement cost). SFAS 157 utilizes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value into three broad levels. The following is a brief description of those three levels:

Edgar Filing: CVR ENERGY INC - Form 10-Q

Level 1 Quoted prices in active market for identical assets and liabilities

Level 2 Other significant observable inputs (including quoted prices in active markets for similar assets or liabilities)

Level 3 Significant unobservable inputs (including the Company's own assumptions in determining the fair value)

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

The following table sets forth the assets and liabilities measured at fair value on a recurring basis, by input level, as of September 30, 2008 (in thousands):

	Level 1	Level 2	Level 3	Total
Cash Flow Swap		\$ (264,536)		\$ (264,536)
Interest Rate Swap		(2,758)		(2,758)
Other Derivative Agreements		4,726		4,726

The Company's derivative contracts giving rise to assets or liabilities under Level 2 are valued using pricing models based on other significant observable inputs.

(16) Related Party Transactions***Management Services Agreements***

GS Capital Partners V Fund, L.P. and related entities (GS) and Kelso Investment Associates VII, L.P. and related entity (Kelso) through their majority ownership of CALLC and CALLC II are majority owners of CVR.

On June 24, 2005, CALLC entered into management services agreements with each of GS and Kelso pursuant to which GS and Kelso agreed to provide CALLC with managerial and advisory services. In consideration for these services, an annual fee of \$1.0 million was paid to each of GS and Kelso, plus reimbursement for any out-of-pocket expenses. The agreements terminated upon consummation of CVR's initial public offering on October 26, 2007. Relating to the agreements, the Company recorded \$500,000 and \$1,582,000 in selling, general, and administrative expenses (exclusive of depreciation and amortization) for the three and nine months ended September 30, 2007, respectively. As these agreements were terminated on October 26, 2007 there have been no expenses recorded in 2008.

Cash Flow Swap

CALLC entered into certain crude oil, heating oil and gasoline swap agreements with a subsidiary of GS, J. Aron & Company (J. Aron). Additional swap agreements with J. Aron were entered into on June 16, 2005, with an expiration date of June 30, 2010 (as described in Note 14, "Derivative Financial Instruments"). These agreements were assigned to CRLLC on June 24, 2005. Gains totaling \$65,153,000 and \$44,844,000 were recognized related to these swap agreements for the three months ended September 30, 2008 and 2007, respectively, and are reflected in gain (loss) on derivatives, net in the Consolidated Statements of Operations. For the nine months ended September 30, 2008 and 2007 the Company recognized losses of \$38,696,000 and \$240,861,000, respectively, which are reflected in gain (loss) on derivatives, net in the Consolidated Statements of Operations. In addition, the Consolidated Balance Sheet at September 30, 2008 and December 31, 2007 includes liabilities of \$236,633,000 and \$262,415,000, respectively, included in current payable to swap counterparty, and \$27,903,000 and \$88,230,000, respectively, included in long-term payable to swap counterparty.

J. Aron Deferrals

As a result of the flood and the temporary cessation of business operations in 2007, the Company entered into three separate deferral agreements for amounts owed to J. Aron. The amount deferred, excluding accrued interest, totaled \$123.7 million. Of the original deferred balances, \$36.2 million has been repaid as of September 30, 2008. These deferred payment amounts are included in the Consolidated Balance Sheet at September 30, 2008 in current payable to swap counterparty. The deferred balance owed to the GS subsidiary, excluding accrued interest payable, totaled \$87.5 million at September 30, 2008. Approximately \$0.5 million of accrued interest payable related to the deferred payments is included in other current liabilities at September 30, 2008.

On July 29, 2008, CRLLC entered into a revised letter agreement with J. Aron to defer \$87.5 million of the deferred payment amounts under the 2007 deferral agreements. On August 29, 2008, the Company paid

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)**

\$36.2 million of the balance to J. Aron, as well as \$7.1 million in accrued interest. Subsequent to the quarter end, the Company paid an additional \$15.0 million through use of proceeds received on the environmental insurance policy.

The deferral agreement was further amended on October 11, 2008 and the outstanding balance of \$72.5 million on that date was further deferred to July 31, 2009. Additional proceeds of \$9.8 million received under the property insurance policy subsequent to October 11, 2008, were used to pay down the principle balance on the deferral amount to \$62.7 million as of November 6, 2008. Under the most recent deferral, the unpaid deferred amounts and all accrued and unpaid interest are due and payable in full on July 31, 2009. However, all accrued interest through December 15, 2008 must be paid on that day. Interest will accrue on the amounts deferred at the rate of (i) LIBOR plus 2.75% until December 15, 2008 and (ii) LIBOR plus 5.00%-7.50% (depending on J. Aron's cost of capital) from December 15, 2008 through the date of payment. CRLLC must make prepayments of \$5.0 million for the quarters ending March 31, 2009 and June 30, 2009 to reduce the deferred amounts. To the extent that CRLLC or any of its subsidiaries receives net insurance proceeds related to the July 2007 flood that are not required to be used to prepay CRLLC's credit agreement or be invested pursuant to the terms of CRLLC's credit agreement, all net insurance proceeds will be used to prepay the deferred amounts. GS and Kelso each agreed to guarantee one half of the deferral amount of \$72.5 million.

Interest Rate Swap

On June 30, 2005, CALLC entered into three interest-rate swap agreements with J. Aron (as described in Note 14, Derivative Financial Instruments). Losses totaling \$256,000 and \$1,894,000 were recognized related to these swap agreements for the three months ended September 30, 2008 and 2007, respectively, and are reflected in gain (loss) on derivatives, net in the Consolidated Statements of Operations. For the nine months ended September 30, 2008 and 2007, the Company recognized losses totaling \$1,107,000 and \$683,000, respectively related to these swap agreements which are reflected in gain (loss) on derivatives, net, in the Consolidated Statements of Operations. In addition, the Consolidated Balance Sheet at September 30, 2008 and December 31, 2007 includes \$786,000 and \$371,000, respectively, in other current liabilities and \$590,000 and \$557,000, respectively, in other long-term liabilities related to the same agreements.

Crude Oil Supply Agreement

Coffeyville Resources Refining & Marketing, LLC (CRRM), a subsidiary of the Company, is a counterparty to a crude oil supply agreement with J. Aron. Under the agreement, the parties agreed to negotiate the cost of each barrel of crude oil to be purchased from a third party, and CRRM agreed to pay J. Aron a fixed supply service fee per barrel over the negotiated cost of each barrel of crude purchased. The cost is adjusted further using a spread adjustment calculation based on the time period the crude oil is estimated to be delivered to the refinery, other market conditions, and other factors deemed appropriate. The Company recorded \$26,407,000 and \$360,000 on the Consolidated Balance Sheets at September 30, 2008 and December 31, 2007, respectively, in prepaid expenses and other current assets for the prepayment of crude oil. In addition, \$41,111,000 and \$43,773,000 were recorded in inventory and \$24,315,000 and \$42,666,000 were recorded in accounts payable at September 30, 2008 and December 31, 2007, respectively. Expenses associated with this agreement included in cost of product sold (exclusive of depreciation and amortization) for the three month periods ended September 30, 2008 and 2007 totaled \$966,006,000 and \$251,958,000, respectively. For the nine months ended September 30, 2008 and 2007, the Company recognized expenses of \$2,640,135,000 and \$772,872,000, respectively, associated with this agreement included in cost of product sold (exclusive of depreciation

and amortization).

Cash and Cash Equivalents

The Company opened a highly liquid money market account with average maturities of less than 90 days within the Goldman Sachs fund family in September 2008. As of September 30, 2008, the balance in the account was approximately \$51.0 million.

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(17) Business Segments**

CVR measures segment profit as operating income for Petroleum and Nitrogen Fertilizer, CVR's two reporting segments, based on the definitions provided in SFAS No. 131, *Disclosures about Segments of an Enterprise and Related Information*. All operations of the segments are located within the United States.

Petroleum

Principal products of the Petroleum Segment are refined fuels, propane, and petroleum refining by-products including pet coke. CVR sells the pet coke to the Partnership for use in the manufacturing of nitrogen fertilizer at the adjacent nitrogen fertilizer plant. For CVR, a per-ton transfer price is used to record intercompany sales on the part of the Petroleum Segment and corresponding intercompany cost of product sold (exclusive of depreciation and amortization) for the Nitrogen Fertilizer Segment. The per ton transfer price paid, pursuant to the coke supply agreement that became effective October 24, 2007, is based on the lesser of a coke price derived from the price received by the fertilizer segment for UAN (subject to a UAN based price ceiling and floor) and a coke price index for pet coke. Prior to October 25, 2007 intercompany sales were based upon a price of \$15 per ton. The intercompany transactions are eliminated in the Other Segment. Intercompany sales included in petroleum net sales were \$3,353,000 and \$680,000 for the three months ended September 30, 2008 and 2007, respectively. Intercompany sales included in petroleum net sales were \$8,959,000 and \$2,560,000 for the nine months ended September 30, 2008 and 2007, respectively.

Intercompany cost of product sold (exclusive of depreciation and amortization) for the hydrogen sales described below under Nitrogen Fertilizer was \$40,000 and \$2,593,000 for the three months ended September 30, 2008 and 2007, respectively. The intercompany cost of product sold (exclusive of depreciation and amortization) for the hydrogen sales described below under Nitrogen Fertilizer was \$7,932,000 and \$10,611,000 for the nine months ended September 30, 2008 and 2007, respectively.

Nitrogen Fertilizer

The principal product of the Nitrogen Fertilizer Segment is nitrogen fertilizer. Intercompany cost of product sold (exclusive of depreciation and amortization) for the coke transfer described above was \$3,364,000 and \$631,000 for the three months ended September 30, 2008 and 2007, respectively. Intercompany cost of product sold (exclusive of depreciation and amortization) for the coke transfer described above was \$8,235,000 and \$2,597,000 for the nine months ended September 30, 2008 and 2007, respectively.

Beginning in 2008, the Nitrogen Fertilizer Segment changed the method of classification of intercompany hydrogen sales to the Petroleum Segment. In 2008, these amounts have been reflected as Net Sales for the fertilizer plant. Prior to 2008, the Nitrogen Fertilizer Segment reflected these transactions as a reduction of cost of product sold (exclusive of depreciation and amortization). For the quarters ended September 30, 2008 and 2007, the net sales generated from intercompany hydrogen sales were \$40,000 and \$2,593,000, respectively. For the nine months ended September 30, 2008 and 2007, hydrogen sales were \$7,932,000 and \$10,611,000, respectively. As noted above, the net sales of \$2,593,000 and \$10,611,000 were included as a reduction to the cost of product sold (exclusive of depreciation and amortization) for the three and nine months ended September 30, 2007. As these intercompany sales are eliminated, there is no financial statement impact on the consolidated financial statements.

Table of Contents**CVR ENERGY, INC. AND SUBSIDIARIES****NOTES TO THE CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)*****Other Segment***

The Other Segment reflects all intercompany eliminations, including significant intercompany eliminations of receivables and payables between the segments, cash and cash equivalents, all debt related activities, income tax activities and other corporate activities that are not allocated to the operating segments.

(18) Subsequent Events

On October 10, 2008, the Company, through its wholly-owned subsidiaries, entered into ten year agreements with Magellan Pipeline Company LP (Magellan), which agreements will allow for the transportation of an additional 20,000 barrels per day of refined fuels from the Company's Coffeyville, Kansas refinery and the storage of refined fuels on the Magellan system.

On June 19, 2008, CVR filed a registration statement with the SEC in connection with a proposed offering of \$125.0 million aggregate principal amount of CVR's Convertible Senior Notes due 2013. CVR filed an amendment to the aforementioned registration statement on August 25, 2008. CVR requested that the SEC withdraw the registration statement on November 4, 2008. The Company will record a write-off of previously deferred costs associated with the offering of approximately \$1.5 million in the fourth quarter of 2008.

On November 3, 2008, following a period of discussions with the City of Coffeyville, Kansas (the City) regarding CRNF's electricity contract and in light of the City's contention that CRNF had constructively terminated the contract, CRNF filed a lawsuit against the City in the District Court of Johnson County, Kansas. Under the contract CRNF must make a series of future payments for electrical generation and transmission and city margin based upon agreed upon rates. The City recently began charging a higher rate for electricity than what had been agreed to in the contract. The Company filed the lawsuit to have the contract enforced as written and to recover other damages. The Company believes that if the City is successful in the lawsuit, the higher electricity costs that it would be allowed to charge would not be material to the Company's results of operations.

Table of Contents

Item 2. *Management's Discussion and Analysis of Financial Condition and Results of Operations*

The following discussion and analysis should be read in conjunction with the consolidated financial statements and related notes and with the statistical information and financial data appearing in this Quarterly Report on Form 10-Q for the quarter ended September 30, 2008 as well as the Company's Annual Report on Form 10-K/A for the year ended December 31, 2007. Results of operations for the three and nine month periods ended September 30, 2008 are not necessarily indicative of results to be attained for any other period.

Forward-Looking Statements

This Form 10-Q, including this Management's Discussion and Analysis of Financial Condition and Results of Operations, contains forward-looking statements as defined by the SEC. Such statements are those concerning contemplated transactions and strategic plans, expectations and objectives for future operations. These include, without limitation:

statements, other than statements of historical fact, that address activities, events or developments that we expect, believe or anticipate will or may occur in the future;

statements relating to future financial performance, future capital sources and other matters; and

any other statements preceded by, followed by or that include the words anticipates, believes, expects, plans, intends, estimates, projects, could, should, may, or similar expressions.

Although we believe that our plans, intentions and expectations reflected in or suggested by the forward-looking statements we make in this Form 10-Q, including this Management's Discussion and Analysis of Financial Condition and Results of Operations, are reasonable, we can give no assurance that such plans, intentions or expectations will be achieved. These statements are based on assumptions made by us based on our experience and perception of historical trends, current conditions, expected future developments and other factors that we believe are appropriate in the circumstances. Such statements are subject to a number of risks and uncertainties, many of which are beyond our control. You are cautioned that any such statements are not guarantees of future performance and actual results or developments may differ materially from those projected in the forward-looking statements as a result of various factors, including but not limited to those set forth under Risk Factors attached hereto as Exhibit 99.1.

All forward-looking statements contained in this Form 10-Q speak only as of the date of this document. We undertake no obligation to update or revise publicly any forward-looking statements to reflect events or circumstances that occur after the date of this Form 10-Q, or to reflect the occurrence of unanticipated events.

Restatement of September 30, 2007 Financial Statements

As previously disclosed in our amended Annual Report on Form 10-K/A, the Company determined that the 2007 fiscal year financial information contained certain errors resulting from accounting errors in the third and fourth quarters of 2007. The errors arose principally from the calculation of the cost of crude oil purchased by the Company and associated transactions. We did not amend our previously filed Quarterly Report on Form 10-Q for the period ended September 30, 2007. The financial information presented in this report for September 30, 2008 contains restated information for the September 30, 2007 interim period. The effect of the restatement on our period ended September 30, 2007 is set forth in tables in Note 2 to the condensed consolidated financial statements.

Company Overview

We are an independent refiner and marketer of high value transportation fuels. In addition, we currently own all of the interests (other than the managing general partner interest and associated IDRs) in a limited partnership which produces ammonia and urea ammonia nitrate, or UAN, fertilizers.

We operate under two business segments: petroleum and nitrogen fertilizer. Our petroleum business includes a 115,000 barrel per day, or bpd, complex full coking medium sour crude refinery in Coffeyville, Kansas. In addition, supporting businesses include (1) a crude oil gathering system serving central Kansas, northern Oklahoma, and southwestern Nebraska, (2) storage and terminal facilities for asphalt and refined fuels in Phillipsburg, Kansas, (3) a

Table of Contents

145,000 bpd pipeline system that transports crude oil to our refinery and associated crude oil storage tanks with a capacity of approximately 1.2 million barrels and (4) a rack marketing division supplying product into tanker trucks for distribution directly to customers located in close geographic proximity to Coffeyville and Phillipsburg and to customers at throughput terminals on Magellan Midstream Partners L.P.'s (Magellan) refined products distribution systems. In addition to rack sales (sales which are made at terminals into third party tanker trucks), we make bulk sales (sales through third party pipelines) into the mid-continent markets via Magellan and into Colorado and other destinations utilizing the product pipeline networks owned by Magellan, Enterprise Products Partners L.P. and NuStar Energy L.P. Our refinery is situated approximately 100 miles from Cushing, Oklahoma, one of the largest crude oil trading and storage hubs in the United States. Cushing is supplied by numerous pipelines from locations including the U.S. Gulf Coast and Canada, providing us with access to virtually any crude variety in the world capable of being transported by pipeline.

The nitrogen fertilizer segment consists of our interest in CVR Partners, LP, a limited partnership controlled by our affiliates, which operates a nitrogen fertilizer plant and the nitrogen fertilizer business. The nitrogen fertilizer business is one of the low cost producers and marketers of ammonia and UAN in North America, given our use of pet coke and assuming relatively high natural gas prices. The fertilizer plant is the only commercial facility in North America utilizing a coke gasification process to produce nitrogen fertilizers. The use of low cost by-product pet coke from our adjacent oil refinery as feedstock (rather than natural gas) to produce hydrogen provides the facility with a significant competitive advantage during periods of high and volatile natural gas prices. The plant's competition utilizes natural gas to produce ammonia. During periods of high and volatile natural gas prices, the plant is a low cost producer of fertilizer products in North America. Recognizing the fixed cost nature of our fertilizer business, the competitive advantage decreases proportionately as natural gas prices decline. With the recent decline in natural gas prices, the historic cost advantage that the plant has had is now beginning to narrow.

CVR Energy's Initial Public Offering

On October 26, 2007 we completed an initial public offering of 23,000,000 shares of our common stock. The initial public offering price was \$19.00 per share. The net proceeds to us from the sale of our common stock were approximately \$408.5 million, after deducting underwriting discounts and commissions. We also incurred approximately \$11.4 million of other costs related to the initial public offering. The net proceeds from the offering were used to repay \$280.0 million of CVR's outstanding term loan debt and to repay in full our \$25.0 million secured credit facility and \$25.0 million unsecured credit facility. We also repaid \$50.0 million of indebtedness under our revolving credit facility. The balance of the net proceeds received were used for general corporate purposes.

In connection with the initial public offering, we also became the indirect owner of Coffeyville Resources, LLC (CRLLC) and all of its refinery assets. This was accomplished by CVR issuing 62,866,720 shares of its common stock to certain entities controlled by its majority stockholders pursuant to a stock split in exchange for the interests in certain subsidiaries of CALLC. Immediately following the completion of the offering, there were 86,141,291 shares of common stock outstanding, excluding shares of non-vested stock issued.

CVR Energy's Proposed Secondary Offering

CVR filed a registration statement with the SEC on June 19, 2008 in which its majority stockholders and chairman proposed to offer 10 million shares of the Company's common stock. The Company announced on July 30, 2008 that the majority stockholders elected not to proceed with the proposed secondary offering at that time due to then-existing market conditions. The registration statement remains on file with the SEC, and the selling stockholders may elect to proceed with the equity offering in the future.

CVR Energy's Proposed Convertible Debt Offering

CVR filed a registration statement with the SEC on June 19, 2008 in connection with a proposed offering of \$125.0 million aggregate principal amount of CVR's Convertible Senior Notes due 2013. CVR filed an amendment to this registration statement on August 25, 2008. CVR requested that the SEC withdraw the registration statement on November 4, 2008. The Company will record a write-off of previously deferred costs associated with the offering of approximately \$1.5 million in the fourth quarter of 2008.

Table of Contents***Major Influences on Results of Operations***

Petroleum Business. Our earnings and cash flow from petroleum operations are primarily affected by the relationship between refined product prices and the prices for crude oil and other feedstocks such as liquid petroleum gas and natural gas. The prices of crude oil and refined products have fluctuated substantially in recent periods and specifically during the three months ended September 30, 2008. The cost to acquire feedstocks, and the price for which refined products are ultimately sold, depend on market factors that are typically beyond our control. These include the overall supply of, and demand for, crude oil, gasoline, and other refined products. These factors are influenced by changes in domestic and foreign economics, weather conditions, domestic and foreign political affairs, foreign and domestic production levels, the availability of imports, the marketing of competitive fuels, and the extent of government regulation. Because we apply first-in, first-out, or FIFO accounting to value our inventory, crude oil price movements can cause significant fluctuations in the valuation of our in-process inventories and finished products in-process inventories. The effect of changes in crude oil prices on our results of operations is also influenced by the rate at which the prices of refined products adjust to reflect these changes.

Feedstock and refined product prices are also affected by other factors, such as product pipeline capacity, local market conditions and the operating levels of competing refineries. Crude oil costs and the prices of refined products have historically been subject to significant fluctuations. An expansion or upgrade of refining capacity, price volatility, international political and economic developments, and other factors beyond our control are likely to continue to play a significant role in refining industry economics. These factors can impact, among other things, the level of inventories in the market, contributing to price volatility and a reduction in product margins. Moreover, the refining industry typically experiences seasonal fluctuations in demand for refined products, such as increases in the demand for gasoline during the summer driving season and for home heating oil during the winter.

In order to assess our operating performance, we compare our refining margin, calculated as the difference between net sales and cost of product sold (exclusive of depreciation and amortization), against a widely used industry refining margin benchmark. The industry standard that the Company uses assumes that two barrels of benchmark light sweet crude oil are converted into one barrel of conventional gasoline and one barrel of distillate fuel oil. This benchmark is referred to as the 2-1-1 crack spread. Because we calculate the benchmark margin using the market value of New York Mercantile Exchange (NYMEX) gasoline and heating oil against the market value of NYMEX WTI (WTI) crude oil, we refer to the benchmark as the NYMEX 2-1-1 crack spread, or simply, the 2-1-1 crack spread. The 2-1-1 crack spread is expressed in dollars per barrel and is a proxy for the per barrel margin that a sweet crude refinery would earn assuming it produced and sold the benchmark production of gasoline and heating oil.

Crude oil prices rose to historic highs during the first part of July 2008, but declined significantly by the end of the third quarter. These prices continued to decline in October and could have a significant impact on our net income due to the unfavorable impact expected to occur in the fourth quarter of 2008 caused by our use of the FIFO accounting method for inventory. West Texas Intermediate crude oil averaged \$113.52 per barrel for the nine months ending September 30, 2008, as compared to \$66.19 per barrel during the comparable period in 2007. WTI spiked to \$145.29 per barrel on July 3, 2008 and moved downward to \$100.64 per barrel on September 30, 2008, averaging \$118.22 per barrel for the third quarter. WTI was \$60.77 per barrel on November 6, 2008.

Every barrel of crude oil that we process yields approximately 88% high performance transportation fuels and distillates, and approximately 12% heavy oils and solids. Volumetric losses (lost volume typically resulting from evaporation or some chemical change) also occur during the refining process. As crude oil costs increased, sales prices for many byproducts did not increase in the same proportions, resulting in lower gross margin during the periods of rising prices.

When refined product prices increase proportionally with crude oil prices, the loss on byproduct sales and volumetric loss on crude oil processed should be more than offset by refined fuel margins. With the recent crude price volatility, refined fuels have failed to keep pace with crude oil costs as evidenced by the narrowed 2-1-1 crack spread as a percentage of crude oil prices. For the third quarter of 2007 the 2-1-1 crack spread as a percentage of crude oil price was approximately 16.1% compared to 11.3% in the third quarter of 2008.

Table of Contents

Although crack spreads are relatively low compared to historical levels as a percentage of crude oil price, the absolute value of the NYMEX 2-1-1 crack spread for the third quarter of 2008 was \$13.33 per barrel, which is well above the fixed value of our Cash Flow Swap for the quarter of \$7.87 per barrel. Because the actual NYMEX 2-1-1 crack spread was greater than the Cash Flow Swap fixed value, we incurred a realized loss of \$33.8 million for the quarter on 6.2 million hedged barrels. The absolute value NYMEX 2-1-1 crack spread will continue to have a significant impact on our financial results due to the Cash Flow Swap until June 30, 2009, when the number of barrels subject to the Cash Flow Swap decreases from approximately 6.0 million barrels per quarter to 1.5 million barrels per quarter.

While the 2-1-1 crack spread is a benchmark for our refinery margin, we have certain feedstock costs and/or logistical advantages as compared to a benchmark refinery. Our product yield is less than total refinery throughput, and the crack spread does not account for all the factors that affect refinery margin. Our refinery is able to process a blend of crude oil that includes quantities of heavy and medium sour that has historically cost less than WTI crude oil, a light sweet crude oil. We measure the cost advantage of our crude oil slate by calculating the spread between the price of our delivered crude oil to the price of WTI crude oil. The spread is referred to as our consumed crude differential, which can significantly impact our refinery margin. Our differential will move directionally with changes in the West Texas Sour (WTS) differential to WTI, and the Western Canadian Select (WCS) differential to WTI. Both of these differentials indicate the relative price of heavier, more sour, slate to a lighter sweet WTI. The WTI-WCS differential for the third quarter of 2008 was \$18.69 a barrel as compared to \$25.80 a barrel in the third quarter of 2007. As a percentage of WTI, however, this metric averaged 34.3% of WTI in the 2007 period compared to 15.8% in the third quarter of 2008. The correlation between our consumed crude differential and published differentials will vary depending on the volume of light medium sour crude and heavy sour crude we purchase as a percent of our total crude volume.

Our petroleum business has been impacted by lower refining margins, reduced demand and our Cash Flow Swap. While improving somewhat from their recent lows, midcontinent refining margins remain below historical metrics when factoring in the high cost of crude. Increased throughput at our refinery provides some offset of these factors. Historically, the strongest refining margins occur during the second and third quarters based on gasoline and diesel demand, and while crude oil prices have declined sharply from recent highs, crack spreads have not yet improved in line with the crude price declines due to continuing gasoline demand weakness.

We produce a significant volume of high value products, such as gasoline and distillates. Approximately 40% of our product slate is ultra low sulfur diesel, which provides us with income tax credits and is currently selling at higher margins than gasoline. Gasoline production was approximately 45.3% of our third quarter production, up from 44.4% in the third quarter of 2007. We continue to maximize distillate production, which comprised 39.1% of our production in the third quarter of 2008 compared to 40.2% in the third quarter of 2007. The balance of our production is devoted to other liquids and products, including petroleum coke which is used by the nitrogen fertilizer business. We benefit from the fact that our marketing region consumes more refined products than it produces, resulting in market prices high enough to cover the logistics cost for U.S. Gulf Coast refineries to ship into our region to meet demand. The result of this logistical advantage of our refinery operations typically yields crack spreads that are favorable to those depicted by the 2-1-1 model. The difference between our price and the price used to calculate the 2-1-1 crack spread is referred to as gasoline PADD II, Group 3 vs. NYMEX basis, or gasoline basis, and heating oil PADD II, Group 3 vs. NYMEX basis, or heating oil basis. The Group 3 basis differential averaged \$3.65 a barrel in the third quarter of 2008, compared to \$9.46 a barrel in the comparable period of 2007.

Our direct operating expense structure is also important to our profitability. Major direct operating expenses include energy, employee labor, maintenance, contract labor, and environmental compliance. Our predominant variable cost is energy which is comprised mainly of electricity and natural gas. We are therefore sensitive to the price movement of these energy sources.

Consistent, safe, and reliable operations at our refinery are key to our financial performance and results of operations. Unplanned downtime may result in lost margin opportunity, increased maintenance expense and a temporary increase in working capital investment and related inventory position. We seek to mitigate the financial impact of planned downtime, such as major turnaround maintenance, through a diligent planning process that takes

Table of Contents

into account the margin environment, the availability of resources to perform needed maintenance, feedstock costs and other factors.

Nitrogen Fertilizer Business. In the nitrogen fertilizer business, earnings and cash flow from operations are primarily affected by the relationship between nitrogen fertilizer product prices and direct operating expenses. Unlike its competitors, the nitrogen fertilizer business uses minimal natural gas as feedstock and, as a result, is not directly impacted in terms of cost by high or volatile swings in natural gas prices. Instead, our adjacent oil refinery supplies the majority of the pet coke feedstock needed by the nitrogen fertilizer business. The price at which nitrogen fertilizer products are ultimately sold depends on numerous factors, including the supply of, and the demand for, nitrogen fertilizer products which, in turn, depends on, among other factors, the price of natural gas, the cost and availability of fertilizer transportation infrastructure, changes in the world population, weather conditions, grain production levels, the availability of imports, and the extent of government intervention in agriculture markets. While net sales of the nitrogen fertilizer business could fluctuate significantly with movements in natural gas prices during periods when fertilizer markets are weak and nitrogen fertilizer products sell at lower prices, high natural gas prices do not force the nitrogen fertilizer business to shut down its operations because it employs pet coke as a feedstock to produce ammonia and UAN rather than natural gas.

Third quarter 2008 NYMEX natural gas prices averaged \$8.99 per million Btus compared with \$6.24 per million Btus for the comparable period in 2007. This rise in natural gas prices implies a minimum increase of \$90.75 per ton in production costs for natural gas based North American producers while our production cost remains substantially unchanged.

Nitrogen fertilizer prices are also affected by other factors, such as local market conditions and the operating levels of competing facilities. Natural gas costs and the price of nitrogen fertilizer products have historically been subject to wide fluctuations. An expansion or upgrade of competitors' facilities, price volatility, international political and economic developments and other factors are likely to continue to play an important role in nitrogen fertilizer industry economics. These factors can impact, among other things, the level of inventories in the market, resulting in price volatility and a reduction in product margins. Moreover, the industry typically experiences seasonal fluctuations in demand for nitrogen fertilizer products.

The demand for fertilizers is affected by the aggregate crop planting decisions and fertilizer application rate decisions of individual farmers. Individual farmers make planting decisions based largely on the prospective profitability of a harvest, while the specific varieties and amounts of fertilizer they apply depend on factors like crop prices, their current liquidity, soil conditions, weather patterns and the types of crops planted.

The value of nitrogen fertilizer products is also an important consideration in understanding our results. The nitrogen fertilizer business generally upgrades approximately two-thirds of its ammonia production into UAN, a product that presently generates a greater value than ammonia. It takes approximately .41 tons of ammonia to produce 1 ton of 32% UAN. UAN production is a major contributor to our profitability. We continue with plans for full conversion of our ammonia product line to UAN and for expansion of total UAN capacity from 2,000 to 3,000 tons per day. In order to assess the value of nitrogen fertilizer products, we calculate netbacks, also referred to as plant gate price. Netbacks refer to the unit price of fertilizer, in dollars per ton, offered on a delivered basis, less the costs to ship.

Average prices for both ammonia and UAN for the three and nine months ended September 30, 2008 reflect strong demand for these products during the first nine months of 2008. Ammonia plant gate prices averaged \$685 per ton for the third quarter ended September 30, 2008, compared to \$363 per ton during the comparable period in 2007. UAN prices averaged \$324 per ton for the third quarter ended September 30, 2008, compared to \$234 per ton during the comparable 2007 period. While there has been some recent price erosion for all fertilizer products, fundamental demand drivers such as forecasted commodity grain stock to use ratios and estimated 2009 acres planted remain

strong. Our order book as of September 30, 2008 contains an average net back price of ammonia and UAN of \$786 and \$376 per ton, respectively. Actual future prices will depend on supply and demand and other factors described herein.

The direct operating expense structure of the nitrogen fertilizer business is also important to its profitability. Using a pet coke gasification process, the nitrogen fertilizer business has significantly higher fixed costs than

Table of Contents

natural gas-based fertilizer plants. Major direct operating expenses include electrical energy, employee labor, maintenance, including contract labor, and outside services. These costs comprise the fixed costs associated with the fertilizer plant.

The nitrogen fertilizer business generally undergoes a facility turnaround every two years. The turnaround typically lasts 15-20 days and requires approximately \$2-3 million in direct costs per turnaround. The facility completed a scheduled turnaround in October 2008. As of September 30, 2008, \$0.1 million had been incurred. It is estimated that approximately \$3.1 million of costs were incurred in October associated with the turnaround.

Factors Affecting Comparability of Our Financial Results

Our historical results of operations for the periods presented may not be comparable with prior periods or to our results of operations in the future for the reasons discussed below.

2007 Flood and Crude Oil Discharge

During the weekend of June 30, 2007, torrential rains in southeast Kansas caused the Verdigris River to overflow its banks and flood the town of Coffeyville, Kansas. Our refinery and nitrogen fertilizer plant, which are located in close proximity to the Verdigris River, were severely flooded, sustained major damage and required extensive repairs.

As a result of the flooding, our refinery and nitrogen fertilizer facilities stopped operating on June 30, 2007. The refinery started operating its reformer on August 6, 2007 and began to charge crude oil to the facility on August 9, 2007. Substantially all of the refinery's units were in operation by August 20, 2007. The nitrogen fertilizer facility, situated on slightly higher ground, sustained less damage than the refinery. The nitrogen fertilizer facility initiated startup at its production facility on July 13, 2007. Due to the down time, we experienced a significant revenue loss attributable to the property damage during the period when the facilities were not in operation. Total gross costs incurred and recorded as of September 30, 2008 related to the third party costs to repair the refinery and fertilizer facilities were approximately \$77.0 million and \$4.4 million, respectively.

In addition, despite our efforts to secure the refinery prior to its evacuation as a result of the flood, we estimate that 1,919 barrels (80,600 gallons) of crude oil and 226 barrels of crude oil fractions were discharged from our refinery into the Verdigris River flood waters beginning on or about July 1, 2007. We substantially completed remediating the damage caused by the crude oil discharge in July 2008 and expect any remaining minor remedial actions to be completed by December 31, 2008. In 2007, the Company received insurance proceeds of \$10.0 million under its property insurance policy and \$10.0 million under its environmental policies related to recovery of certain costs associated with the crude oil discharge. In the first quarter of 2008 the Company received \$1.5 million under its Builders Risk Insurance Policy. In the third quarter of 2008, the Company received \$13.0 million under its property insurance policy and \$15.0 million was received from its primary environmental liability insurance carrier, which when added to the prior \$10.0 million paid by that carrier, resulted in payment of the policy limit under such primary environmental liability policy of \$25.0 million. As of September 30, 2008, the Company had received \$49.5 million in insurance recoveries. In October 2008, the Company through certain wholly-owned subsidiaries submitted an advance payment proof of loss to certain of its insurers for unallocated property damage. The Company expects to receive an advance payment related thereto in the amount of approximately \$10.1 million. As of November 6, 2008, the Company has received \$9.8 million of the \$10.1 million total, increasing the total insurance recoveries received from \$49.5 million at September 30, 2008 to \$59.3 million as of November 6, 2008.

The Company received in May 2008 notices of claims from sixteen private claimants under the Oil Pollution Act in an aggregate amount of approximately \$4.4 million. Subsequently, in August, 2008, those claimants filed suit against the Company in the United States District Court for the District of Kansas in Wichita. We believe that the resolution of

these claims will not have a material adverse effect on our consolidated financial statements.

As of September 30, 2008, the Company has recorded total gross costs associated with the repair of, and other matters relating to, the damage to the Company's facilities and with third party and property damage remediation incurred due to the crude oil discharge of approximately \$154.6 million. Total anticipated insurance recoveries of approximately \$104.2 million have been recorded as of September 30, 2008 (of which \$49.5 million had already

Table of Contents

been received as of September 30, 2008 by the Company from insurance carriers). At September 30, 2008, total accounts receivable from insurance were \$54.7 million. The receivable balance is segregated between current and long-term in the Company's Consolidated Balance Sheet in relation to the nature and classification of the items to be settled. As of September 30, 2008, \$35.4 million of the amounts receivable from insurers were not anticipated to be collected in the next twelve months, and therefore has been classified as a non-current asset.

Below is a summary of the gross cost arising from the flood and crude oil discharge and a reconciliation of the related insurance receivable as of September 30, 2008 (in millions):

	Total	For the Three Months Ended September 30, 2008	For the Nine Months Ended September 30, 2008
Total gross costs incurred	\$ 154.6	\$ 1.0	\$ 7.8
Total insurance receivable	(104.2)	(1.8)	1.1
Net costs associated with the flood	\$ 50.4	\$ (0.8)	\$ 8.9
			Receivable Reconciliation
Total insurance receivable			\$ 104.2
Less insurance proceeds received			(49.5)
Insurance receivable as of September 30, 2008			\$ 54.7

The flood significantly impacted our financial results for the third quarter of 2007 with minimal impact on our third quarter 2008 results.

Refinancing and Prior Indebtedness

In October 2007, we paid down \$280.0 million of outstanding long-term debt with initial public offering proceeds. In addition, proceeds of our initial public offering were used to repay in full our \$25.0 million secured credit facility, our \$25.0 million unsecured credit facility and \$50.0 million of indebtedness under our revolving credit facility. Our Statements of Operations for the three and nine months ended September 30, 2008 include interest expense of \$9.3 million and \$30.1 million, respectively, on term debt of \$485.5 million. Interest expense for the three and nine months ended September 30, 2007 totaled \$18.3 million and \$46.0 million, respectively, on term debt of \$821.1 million.

J. Aron Deferrals

As a result of the flood and the temporary cessation of our operations on June 30, 2007, CRLLC entered into several deferral agreements with J. Aron & Company (J. Aron) with respect to the Cash Flow Swap, which is a series of commodity derivative arrangements whereby if crack spreads fall below a fixed level, J. Aron agreed to pay the difference to us, and if crack spreads rise above a fixed level, we agreed to pay the difference to J. Aron. These deferral agreements deferred to August 31, 2008 the payment of approximately \$123.7 million plus accrued interest.

On July 29, 2008, CRLLC entered into a revised letter agreement with J. Aron to defer further \$87.5 million of the deferred payment amounts under the 2007 deferral agreements to December 15, 2008. On August 29, 2008, in accordance with the additional deferral agreement, we paid \$36.2 million to J. Aron, as well as \$7.1 million in accrued interest as of that date resulting in a remaining balance due of \$87.5 million. As of September 30, 2008, the outstanding balance due was \$87.5 million and the related accrued interest was \$0.5 million.

Subsequent to the September 30, 2008 quarter end, we paid an additional \$15.0 million through use of proceeds received under our environmental insurance policy. An Amended and Restated Settlement Deferral Letter was signed on October 11, 2008 and the remaining balance of \$72.5 million at that time was further deferred until July 31, 2009. Additional insurance recoveries have been received from our property insurance carriers since the October 11, 2008 deferral. As of November 6, 2008, the principal deferral balance after the additional payments from insurance proceeds was \$62.7 million.

Table of Contents

Under this most recent deferral, the unpaid deferred amounts and all accrued and unpaid interest are due and payable in full on July 31, 2009. However, all accrued interest through December 15, 2008 must be paid on that day. Interest will accrue on the amounts deferred at the rate of (i) LIBOR plus 2.75% until December 15, 2008 and (ii) LIBOR plus 5.00%-7.50% (depending on J. Aron's cost of capital) from December 15, 2008 through the date of payment. CRLLC must make prepayments of \$5.0 million for the quarters ending March 31, 2009 and June 30, 2009 to reduce the deferred amounts. To the extent that CRLLC or any of its subsidiaries receives net insurance proceeds related to the July 2007 flood that they are not required to use to prepay CRLLC's credit agreement or invest pursuant to the terms of CRLLC's credit agreement, all net insurance proceeds will be used to prepay the deferred amounts. GS and Kelso each agreed to guarantee one half of the deferred payment obligations.

Change in Reporting Entity as a Result of the Initial Public Offering

Prior to our initial public offering in October 2007, our operations were conducted by an operating partnership, CRLLC. The reporting entity of the organization (CALLC) was also a partnership. Immediately prior to the closing of our initial public offering, CRLLC became an indirect, wholly-owned subsidiary of CVR Energy, Inc. As a result, for periods ending after October 2007, we report our results of operations and financial condition as a corporation on a consolidated basis rather than as an operating partnership.

2007 Turnaround

In April 2007, we completed a planned turnaround of our refining plant at a total cost approximating \$80.4 million, which included \$76.8 million recorded in the nine month period ended September 30, 2007. No amounts were incurred for the three months ended September 30, 2007. The refinery processed crude until February 11, 2007 at which time a staged shutdown of the refinery began. The refinery recommenced operations on March 22, 2007 and continually increased crude oil charge rates until all of the key units were restarted by April 23, 2007. The turnaround significantly impacted our financial results for the first and second quarter of 2007 and had no impact on our 2008 results.

Cash Flow Swap

On June 16, 2005, CALLC entered into the Cash Flow Swap with J. Aron. The Cash Flow Swap was subsequently assigned from CALLC to CRLLC on June 24, 2005. The derivative took the form of three NYMEX swap agreements whereby if absolute (i.e., in dollar terms, not a percentage of crude oil prices) crack spreads fall below the fixed level, J. Aron agreed to pay the difference to us, and if absolute crack spreads rise above the fixed level, we agreed to pay the difference to J. Aron. Based upon expected crude oil capacity of 115,000 bpd, the Cash Flow Swap represents approximately 57% and 14% of crude oil capacity for the periods October 1, 2008 through June 30, 2009 and July 1, 2009 through June 30, 2010, respectively. Under the terms of our credit facility and upon meeting specific requirements related to our leverage ratio and our credit ratings, we are permitted to reduce the Cash Flow Swap to 35,000 bpd, or approximately 30% of executed crude oil capacity, for the period from April 1, 2008 through December 31, 2008, and we are allowed to terminate the Cash Flow Swap in 2009 and 2010, at which time the unrealized loss would become a fixed obligation. We have determined that the Cash Flow Swap does not qualify as a hedge for hedge accounting purposes under SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*. Therefore, the Statement of Operations reflects all the realized and unrealized gains and losses from this swap which can create significant changes between periods. The recent environment of high and rising crude oil prices led to higher crack spreads in absolute terms but significantly narrower crack spreads as a percentage of crude oil prices. As a result, the Cash Flow Swap, under which payments are calculated based on crack spreads in absolute terms, has had a material negative impact on our earnings through September 30, 2008. As a result of our position in the Cash Flow Swap, we paid J. Aron \$33.8 million on October 7, 2008 with respect to the quarter ending September 30, 2008. For the three and nine months ended September 30, 2008 the Company recognized gain (loss) on

derivatives, net, of \$76.7 million and \$(50.5) million, respectively, in the Statements of Operations, including realized and unrealized gain (loss) on the Cash Flow Swap of \$65.2 million in the three months ended September 30, 2008 and \$(38.7) million in the nine months ended September 30, 2008. For the three and nine months ended September 30, 2007 the Company recognized a gain (loss) on derivatives, net, of \$40.5 million and \$(251.9) million, respectively, in the Statements of Operations. As of September 30, 2008

Table of Contents

the Company's Consolidated Balance Sheet reflects a payable to swap counterparty of \$264.5 million compared to \$350.6 million as of December 31, 2007.

Share-Based Compensation

The Company accounts for awards under its Phantom Unit Appreciation Plan as liability based awards. In accordance with FAS 123(R), the expense associated with these awards is based on the current fair value of the awards which is derived from the Company's stock price as remeasured at each reporting date until the awards are settled.

Also, in conjunction with the initial public offering in October 2007, the override units of CALLC were modified and split evenly into override units of CALLC and CALLC II. As a result of the modification, the awards were no longer accounted for as employee awards and became subject to the accounting guidance in EITF 00-12 and EITF 96-18. In accordance with that accounting guidance, the expense associated with the awards is based on the current fair value of the awards which is derived from the Company's common stock price as remeasured at each reporting date until the awards vest. Prior to October 2007, the expense associated with the override units was based on the original grant date fair value of the awards. For the three and nine months ended September 30, 2008 the Company reduced the compensation expense by \$25,769,000 and \$36,892,000, respectively, for all share-based compensation awards. For the three and nine months ended September 30, 2007 the Company increased compensation expense by \$4,502,000 and \$11,285,000, respectively, for all share-based compensation awards.

Income Taxes

On an interim basis, income taxes are calculated based upon an estimated annual effective tax rate for the annual period. The estimated annual effective tax rate changes primarily due to changes in projected annual pre-tax income (loss) as estimated at each interim period and due to the significant federal and state income tax credits projected to be generated. Federal income tax credits were generated related to the production of ultra-low sulfur diesel fuel and Kansas state incentives generated under the High Performance Incentive Program (HPIP) in 2007 and 2008. The projected income tax credits accompanied by increasing projected pre-tax loss for 2007 significantly impacted the estimated annual effective tax rate for 2007 and generated a significant increase to the income tax benefit recorded for the three months ended September 30, 2007. While significant income tax credits of approximately \$60.4 million are estimated to be generated for 2008, the estimated annual effective tax rate for 2008 is determined based upon projected pre-tax income rather than projected pre-tax loss.

Property Tax Assessments

Our results of operations for the three and nine months ending September 30, 2007 reflect minimal property tax for our fertilizer facility (due to a tax abatement). Our results of operations for the three and nine months ended September 30, 2008 reflect a substantially increased property tax for our fertilizer facility, resulting from the new tax assessments by Montgomery County, Kansas with the end of a ten year tax abatement. We have appealed the assessment received in 2008 for the fertilizer facility. The refinery was reappraised in 2007 and 2008 which created a substantial increase in property tax for the refinery. We have appealed both the 2007 and 2008 assessment for the refinery and believe that tax exemptions should apply to any incremental tax which would be owed as a result of the new assessment in 2008.

Consolidation of Nitrogen Fertilizer Limited Partnership

Prior to the consummation of our initial public offering in October 2007, we transferred our nitrogen fertilizer business to the Partnership and sold the managing general partner interest in the Partnership to a new entity owned by our controlling stockholders and senior management. As of September 30, 2008, we own all of the interests in the

Partnership (other than the managing general partner interest and associated IDRs) and are entitled to all cash that is distributed by the Partnership. The Partnership is operated by our senior management pursuant to a services agreement among us, the managing general partner and the Partnership. The Partnership is managed by the managing general partner and, to the extent described below, us, as special general partner. As special general partner of the Partnership, we have joint management rights regarding the appointment, termination and

Table of Contents

compensation of the chief executive officer and chief financial officer of the managing general partner, have the right to designate two members to the board of directors of the managing general partner and have joint management rights regarding specified major business decisions relating to the Partnership. As of September 30, 2008, the Partnership had distributed \$50 million to CVR.

We consolidate the Partnership for financial reporting purposes. We have determined that following the sale of the managing general partner interest to an entity owned by our controlling stockholders and senior management, the Partnership is a variable interest entity (VIE) under the provisions of FASB Interpretation No. 46R, *Consolidation of Variable Interest Entities* (FIN 46R).

Using criteria in FIN 46R, management has determined that we are the primary beneficiary of the Partnership, although 100% of the managing general partner interest is owned by a new entity owned by our controlling stockholders and senior management outside our reporting structure. Since we are the primary beneficiary, the financial statements of the Partnership remain consolidated in our financial statements. The managing general partner's interest is reflected as a minority interest on our balance sheet.

The conclusion that we are the primary beneficiary of the Partnership and required to consolidate the Partnership as a variable interest entity is based upon the fact that substantially all of the expected losses are absorbed by the special general partner, which we own. Additionally, substantially all of the equity investment at risk was contributed on behalf of the special general partner, with nominal amounts contributed by the managing general partner. The special general partner is also expected to receive the majority, if not substantially all, of the expected returns of the Partnership through the Partnership's cash distribution provisions.

We will need to reassess from time to time whether we remain the primary beneficiary of the Partnership in order to determine if consolidation of the Partnership remains appropriate on a going forward basis. Should we determine that we are no longer the primary beneficiary of the Partnership, we will be required to deconsolidate the Partnership in our financial statements for accounting purposes on a going forward basis. In that event, we would be required to account for our investment in the Partnership under the equity method of accounting, which would affect our reported amounts of consolidated revenues, expenses and other income statement items.

The principal events that would require the reassessment of our accounting treatment related to our interest in the Partnership include:

- a sale of some or all of our partnership interests to an unrelated party;
- a sale of the managing general partner interest to a third party;
- the issuance by the Partnership of partnership interests to parties other than us or our related parties; and
- the acquisition by us of additional partnership interests (either new interests issued by the Partnership or interests acquired from unrelated interest holders).

In addition, we would need to reassess our consolidation of the Partnership if the Partnership's governing documents or contractual arrangements are changed in a manner that reallocates between us and other unrelated parties either (1) the obligation to absorb the expected losses of the Partnership or (2) the right to receive the expected residual returns of the Partnership.

Table of Contents**Results of Operations**

The following tables summarize the financial data and key operating statistics for CVR and our two operating segments for the three and nine months ended September 30, 2008 and 2007. The summary financial data for our two operating segments does not include certain SG&A expenses and depreciation and amortization related to our corporate offices. The following data should be read in conjunction with our condensed consolidated financial statements and the notes thereto included elsewhere in this Form 10-Q. All information in Management's Discussion and Analysis of Financial Condition and Results of Operations, except for the balance sheet data as of December 31, 2007, is unaudited.

Table of Contents

- (1) Depreciation and amortization is comprised of the following components as excluded from cost of product sold, direct operating expenses and selling, general administrative expenses:

	Three Months Ended		Nine Months Ended	
	September 30, 2008	2007	September 30, 2008	2007
	(Unaudited)		(Unaudited)	
	(In millions)		(In millions)	
Depreciation and amortization excluded from cost of product sold	\$ 0.6	\$ 0.6	\$ 1.8	\$ 1.8
Depreciation and amortization excluded from direct operating expenses	19.5	9.6	58.3	40.2
Depreciation and amortization excluded from selling, general and administrative expenses	0.5	0.3	1.2	0.7
Depreciation included in net costs associated with the flood		7.6		7.6
Total depreciation and amortization	\$ 20.6	\$ 18.1	\$ 61.3	\$ 50.3

- (2) The following are certain charges and costs incurred in each of the relevant periods that are meaningful to understanding our net income (loss) and in evaluating our performance:

	Three Months Ended		Nine Months Ended	
	September 30, 2008	2007	September 30, 2008	2007
	(Unaudited)		(Unaudited)	
	(In millions)		(In millions)	
Funded letter of credit expense and interest rate swap not included in interest expense(a)	\$ 2.3	\$ 0.7	\$ 5.6	\$ 0.9
Major scheduled turnaround expense(b)	0.1		0.1	76.8
Unrealized net (gain) loss from Cash Flow Swap	(98.9)	(90.2)	(69.1)	98.3

(a) Consists of fees which are expensed to selling, general and administrative expenses in connection with the funded letter of credit facility of \$150.0 million issued in support of the Cash Flow Swap. We consider these fees to be equivalent to interest expense and the fees are treated as such in the calculation of EBITDA in the Credit Facility.

(b) Represents expenses associated with a major scheduled turnaround for the fertilizer facility in October 2008 and for the refinery in 2007.

- (3) Net income (loss) adjusted for unrealized loss (net) from Cash Flow Swap results from adjusting for the derivative transaction that was executed in conjunction with the acquisition of Coffeyville Group Holdings, LLC

by Coffeyville Acquisition LLC (CALLC) on June 24, 2005. On June 16, 2005, CALLC entered into the Cash Flow Swap with J. Aron, a subsidiary of The Goldman Sachs Group, Inc., and a related party of ours. The Cash Flow Swap was subsequently assigned from CALLC to CRLLC on June 24, 2005. The derivative took the form of three NYMEX swap agreements whereby if absolute (i.e., in dollar terms, not a percentage of crude oil prices) crack spreads fall below the fixed level, J. Aron agreed to pay the difference to us, and if absolute crack spreads rise above the fixed level, we agreed to pay the difference to J. Aron. Based upon expected crude oil capacity of 115,000 bpd, the Cash Flow Swap represents approximately 57% and 14% of crude oil capacity for the periods October 1, 2008 through June 30, 2009 and July 1, 2009 through June 30, 2010, respectively. Under the terms of our credit facility and upon meeting specific requirements related to our leverage ratio and our credit ratings, we are permitted to reduce the Cash Flow Swap to 35,000 bpd, or approximately 30% of executed crude oil capacity, for the period from April 1, 2008 through December 31, 2008 and terminate the Cash Flow Swap in 2009 and 2010, at which time the unrealized loss would become a fixed obligation.

We have determined that the Cash Flow Swap does not qualify as a hedge for hedge accounting purposes under current GAAP. As a result, our periodic statements of operations reflect in each period material amounts of unrealized gains and losses based on the increases or decreases in market value of the unsettled position under the swap agreements which are accounted for as a liability on our balance sheet. As the absolute crack spreads

Table of Contents

increase we are required to record an increase in this liability account with a corresponding expense entry to be made to our Statements of Operations. Conversely, as absolute crack spreads decline we are required to record a decrease in the swap related liability and post a corresponding income entry to our statement of operations. Because of this inverse relationship between the economic outlook for our underlying business (as represented by crack spread levels) and the income impact of the unrecognized gains and losses, and given the significant periodic fluctuations in the amounts of unrealized gains and losses, management utilizes Net income (loss) adjusted for unrealized gain or loss from Cash Flow Swap as a key indicator of our business performance. In managing our business and assessing its growth and profitability from a strategic and financial planning perspective, management and our board of directors considers our U.S. GAAP net income results as well as Net income (loss) adjusted for unrealized gain or loss from Cash Flow Swap. We believe that Net income (loss) adjusted for unrealized gain or loss from Cash Flow Swap enhances the understanding of our results of operations by highlighting income attributable to our ongoing operating performance exclusive of charges and income resulting from mark to market adjustments that are not necessarily indicative of the performance of our underlying business and our industry. The adjustment has been made for the unrealized gain or loss from Cash Flow Swap net of its related tax benefit.

Net income (loss) adjusted for unrealized gain or loss from Cash Flow Swap is not a recognized term under GAAP and should not be substituted for net income as a measure of our performance but instead should be utilized as a supplemental measure of financial performance or liquidity in evaluating our business. Because Net income (loss) adjusted for unrealized gain or loss from Cash Flow Swap excludes mark to market adjustments, the measure does not reflect the fair market value of our Cash Flow Swap in our net income. As a result, the measure does not include potential cash payments that may be required to be made on the Cash Flow Swap in the future. Also, our presentation of this non-GAAP measure may not be comparable to similarly titled measures of other companies.

The following is a reconciliation of Net income (loss) adjusted for unrealized gain or loss from Cash Flow Swap to Net income (loss) (in millions):

	Three Months Ended September 30, 2008		Nine Months Ended September 30, 2008	
	2007	As Restated()	2007	As Restated()
	(Unaudited)		(Unaudited)	
Net income (loss) adjusted for unrealized loss from Cash Flow Swap	\$ 40.2	\$ (43.0)	\$ 111.4	\$ 16.0
Plus:				
Unrealized gain (loss) from Cash Flow Swap, net of taxes	59.5	54.2	41.5	(59.1)
Net income (loss)	\$ 99.7	\$ 11.2	\$ 152.9	\$ (43.1)

See note 2 to condensed consolidated financial statements.

- (4) Barrels per day are calculated by dividing the volume in the period by the number of calendar days in the period. Barrels per day as shown here is impacted by plant down-time and other plant disruptions and does not represent the capacity of the facility's continuous operations.

- (5) The tons produced for ammonia represent the total ammonia produced including ammonia produced that was upgraded into UAN. The net tons produced that could be sold were 39.0, 23.9, 83.3 and 68.8 for the three months ended September 30, 2008 and 2007 and the nine months ended September 30, 2008 and 2007, respectively.

Direct operating expenses (exclusive of depreciation and amortization) per crude oil throughput barrel	\$ 3.52	\$ 6.11	\$ 4.04	\$ 9.64
Operating income	20.2	19.4	185.7	122.3

See note 2 to condensed consolidated financial statements.

- (1) Refining margin is a measurement calculated as the difference between net sales and cost of product sold (exclusive of depreciation and amortization). Refining margin is a non-GAAP measure that we believe is important to investors in evaluating our refinery's performance as a general indication of the amount above our cost of product sold that we are able to sell refined products. Each of the components used in this calculation (net sales and cost of product sold (exclusive of depreciation and amortization)) is taken directly from our Statement

of Operations. Our calculation of refining margin may differ from similar calculations of other companies in our industry, thereby limiting its usefulness as a comparative measure. In order to derive the refining margin per crude oil throughput barrel, we utilize the total dollar figures for refining margin as derived above and divide by the applicable number of crude oil throughput barrels for the period.

Table of Contents

- (1) The tons produced for ammonia represent the total ammonia produced including ammonia produced that was upgraded into UAN. The net tons produced that could be sold were 39.0, 23.9, 83.3 and 68.8 for the three months ended September 30, 2008 and 2007 and the nine months ended September 30, 2008 and 2007, respectively.
- (2) Plant gate sales per ton represents net sales less freight and hydrogen revenue divided by product sales volume in tons in the reporting period. Plant gate pricing per ton is shown in order to provide a pricing measure that is comparable across the fertilizer industry.
- (3) On-stream factor is the total number of hours operated divided by the total number of hours in the reporting period.

Three Months Ended September 30, 2008 Compared to the Three Months Ended September 30, 2007

Consolidated Results of Operations

Net Sales. Consolidated net sales were \$1,580.9 million for the three months ended September 30, 2008 compared to \$586.0 million for the three months ended September 30, 2007. The increase of \$994.9 million for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 was primarily due to an increase in petroleum net sales of \$964.4 million that resulted from higher product prices (\$203.1 million) and higher sales volumes (\$761.3 million) primarily resulting from the refinery turnaround which began in February 2007 and was completed in April 2007 and refinery downtime resulting from the flood. In addition, nitrogen fertilizer net sales increased \$33.4 million for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 primarily due to higher plant gate prices (\$19.6 million) and an increase in overall sales volume (\$13.8 million). These results reflect, in part, refinery hardware expansions completed in 2007, particularly the CCR addition and coker expansion. The CCR produces significantly more hydrogen than the unit it replaces. As a result, our refinery purchases very little hydrogen from the fertilizer plant, allowing the fertilizer plant to use that hydrogen to produce ammonia.

Cost of Product Sold Exclusive of Depreciation and Amortization. Consolidated cost of product sold (exclusive of depreciation and amortization) was \$1,440.3 million for the three months ended September 30, 2008 as compared to \$453.2 million for the three months ended September, 2007. The increase of \$987.1 million for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 was attributable to an increase in crude throughput over the comparable period as the benefits of the refinery expansion positively impacted crude oil throughput, and the downtime resulting from the flood had the impact of lowering refined fuel production volume in the quarter ended September 30, 2007. Additionally, higher crude oil prices were a significant contributor to the increase.

Direct Operating Expenses Exclusive of Depreciation and Amortization. Consolidated direct operating expenses (exclusive of depreciation and amortization) were \$56.6 million for the three months ended September 30, 2008 as compared to \$44.5 million for the three months ended September 30, 2007. This increase of \$12.1 million for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 was primarily due to an increase in petroleum direct operating expenses of \$7.6 million primarily the result of increases in expenses associated with utilities and energy, production chemicals, labor, insurance rent and operating materials partially offset by decreases in expenses associated with repairs and maintenance, taxes and outside services. Nitrogen fertilizer accounted for \$4.5 million of the increase in direct operating expenses over the comparable period primarily as a result of increases in expenses associated with property taxes, outside services, utilities, catalyst, refractory, insurance, turnaround and slag disposal partially offset by decreases in expenses associated with repairs and maintenance, royalties and other expenses. The nitrogen fertilizer facility was subject to a property tax abatement that expired

beginning in 2008. We have estimated our accrued property tax liability based upon the assessment value received by the county.

Selling, General and Administrative Expenses Exclusive of Depreciation and Amortization. Consolidated selling, general and administrative expenses were (\$7.8) million for the three months ended September 30, 2008 as compared to \$14.0 million for the three months ended September 30, 2007. This variance was primarily the result of decreases in share-based compensation (\$26.3 million) and bank charges (\$0.2 million) which were partially offset

Table of Contents

by increases in expenses related to administrative labor (\$1.5 million), outside services (\$1.2 million), other selling, general and administrative costs (\$0.9 million), office costs (\$0.4 million) and insurance (\$0.3 million).

Net Costs Associated with Flood. Consolidated net costs associated with flood for the three months ended September 30, 2008 approximated (\$0.8) million as compared to \$32.2 for the three months ended September 30, 2007. The \$0.8 million of cost recoveries in net costs associated with flood for the three months ended September 30, 2008 resulted primarily from the collection of \$15.0 million of insurance proceeds related to our environmental claim in excess of the environmental insurance receivable booked as recoverable for accounting purposes.

Depreciation and Amortization. Consolidated depreciation and amortization was \$20.6 million for the three months ended September 30, 2008 as compared to \$10.5 million for the three months ended September 30, 2007. The increase in depreciation and amortization for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 was primarily the result of the completion of a significant capital project in the Petroleum business in February 2008.

Operating Income. Consolidated operating income was \$72.0 million for the three months ended September 30, 2008 as compared to operating income of \$31.6 million for the three months ended September 30, 2007. For the three months ended September 30, 2008 as compared to the three months ended September 30, 2007, petroleum operating income increased \$0.8 million and nitrogen fertilizer operating income increased by \$32.7 million.

Interest Expense and Other Financing Costs. Consolidated interest expense for the three months ended September 30, 2008 was \$9.3 million as compared to interest expense of \$18.3 million for the three months ended September 30, 2007. This \$9.0 decrease for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 primarily resulted from an overall decrease in the index rates (primarily LIBOR) and a decrease in average borrowings outstanding during the comparable periods. Additionally, consolidated interest expense during the three months ended September 30, 2008 benefited from decreases in the applicable margins under our Credit Facility as compared to the applicable margins in effect for the three months ended September 30, 2007. See Liquidity and Capital Resources Debt.

Interest Income. Interest income was \$0.3 million for the three months ended September 30, 2008 as compared to \$0.2 million for the three months ended September 30, 2007.

Gain (Loss) on Derivatives, net. We have determined that the Cash Flow Swap and our other derivative instruments do not qualify as hedges for hedge accounting purposes under SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*. For the three months ended September 30, 2008, we incurred \$76.7 million in gains on derivatives compared to a \$40.5 million gain on derivatives for the three months ended September 30, 2007. This significant increase in gains on derivatives, net for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 was primarily attributable to the realized losses and unrealized gains on our Cash Flow Swap. Realized losses on the Cash Flow Swap for the three months ended September 30, 2008 and the three months ended September 30, 2007 were \$33.8 million and \$45.4 million, respectively. The decrease in realized losses over the comparable periods was primarily the result of lower average crack spreads for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007. Unrealized losses represent the change in the mark-to-market value on the unrealized portion of the Cash Flow Swap based on changes in the forward NYMEX crack spread that is the basis for the Cash Flow Swap. In addition to the mark-to-market value of the Cash Flow Swap, the outstanding term of the Cash Flow Swap at the end of each period also affects the impact that the changes in the forward NYMEX crack spread may have on the unrealized gain or loss. As of September 30, 2008, the Cash Flow Swap had a remaining term of approximately one year and nine months whereas as of September 30, 2007, the remaining term was approximately two years and nine months. As a result of the shorter remaining term as of September 30, 2008, a similar change in the forward NYMEX crack spread will have a smaller impact on the

unrealized gain or loss. Unrealized gains on our Cash Flow Swap for the three months ended September 30, 2008 and the three months ended September 30, 2007 were \$98.9 million and \$90.2 million, respectively.

Provision for Income Taxes. Income tax expense for the three months ended September 30, 2008 was \$40.4 million, or 28.9% of income before income taxes, as compared to \$42.7 million, or 79.2%, for the three months ended September 30, 2007. The annualized effective rate for 2007, which was applied to loss before income

Table of Contents

taxes for the three months ended September 30, 2007, is higher than the comparable annualized effective rate for 2008, primarily due to the correlation between the amount of credits which were projected to be generated in 2007 from the production of ultra low sulfur diesel fuel and the increased level of projected loss before income taxes for 2007. On an annualized basis, we expect to recognize net federal and state income tax expense at the statutory rate of approximately 39.9% on pre-tax earnings adjusted for permanent non-deductible or non-taxable items and to benefit from gross income tax credits of approximately \$60.4 million.

Minority Interest in (income) loss of Subsidiaries. Minority interest in loss of subsidiaries for the three months ended September 30, 2007 was \$0.1 million. Minority interest for 2007 related to common stock in two of our subsidiaries owned by our chief executive officer. In October 2007, in connection with our initial public offering, our chief executive officer exchanged his common stock in our subsidiaries for common stock of CVR.

Net Income (Loss). For the three months ended September 30, 2008, net income increased to \$99.7 million as compared to net income of \$11.2 million for the three months ended September 30, 2007.

Petroleum Results of Operations for the Three Months Ended September 30, 2008

Net Sales. Petroleum net sales were \$1,510.3 million for the three months ended September 30, 2008 compared to \$545.9 million for the three months ended September 30, 2007. The increase of \$964.4 million during the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 was primarily the result of higher product prices (\$203.1 million) and higher sales volumes (\$761.3 million). Overall sales volumes of refined fuels for the three months ended September 30, 2008 increased 114% as compared to the three months ended September 30, 2007. The increased sales volume primarily resulted from a significant increase in refined fuel production volumes over the comparable period due to refinery downtime in the 2007 period resulting from the flood. In the third quarter of 2007, crude oil throughput averaged 52,497 barrels per day compared to 114,678 barrels per day for the third quarter of 2008. Our average sales price per gallon for the three months ended September 30, 2008 for gasoline of \$3.06 and distillate of \$3.45 increased by 34% and 47%, respectively, as compared to the three months ended September 30, 2007.

Cost of Product Sold Exclusive of Depreciation and Amortization. Cost of product sold includes cost of crude oil, other feedstocks and blendstocks, purchased products for resale, transportation and distribution costs. Petroleum cost of product sold (exclusive of depreciation and amortization) was \$1,437.7 million for the three months ended September 30, 2008 compared to \$450.2 million for the three months ended September 30, 2007. The increase of \$987.5 million during the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 was primarily attributable to a 118% increase in crude oil throughput primarily due to refinery downtime in the comparable 2007 period resulting from the flood. In addition to increased crude oil throughput, higher crude oil prices, increased sales volumes and the impact of FIFO accounting also impacted cost of product sold during the comparable periods. Our average cost per barrel of crude oil consumed for the three months ended September 30, 2008 was \$117.81 compared to \$70.93 for the comparable period of 2007, an increase of 66%. Sales volume of refined fuels increased 114% for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007. In addition, under our FIFO accounting method, changes in crude oil prices can cause fluctuations in the inventory valuation of our crude oil, work in process and finished goods, thereby resulting in a favorable FIFO impact when crude oil prices increase and an unfavorable FIFO impact when crude oil prices decrease. For the three months ended September 30, 2008, we had an unfavorable FIFO impact of \$59.3 million compared to a favorable FIFO impact of \$22.6 million for the comparable period of 2007.

Refining margin per barrel of crude throughput decreased from \$19.81 for the three months ended September 30, 2007 to \$6.88 for the three months ended September 30, 2008. Gross profit per barrel decreased to \$1.98 in the third quarter of 2008, as compared to \$6.42 per barrel in the equivalent period in 2007. The primary contributors to the negative

variance in refining margin per barrel of crude throughput were unfavorable regional differences between gasoline and distillate prices in our primary marketing region and those of the NYMEX. The average gasoline basis for the three months ended September 30, 2008 decreased by \$6.16 per barrel to \$2.62 per barrel compared to basis of \$8.78 per barrel in the comparable period of 2007. The average distillate basis decreased by \$5.46 per barrel to \$4.68 per barrel compared to \$10.14 per barrel in the comparable period of 2007. FIFO inventory losses of \$59.3 million for the three months ended September 30, 2008 as compared to FIFO inventory gains of \$22.6 million for the comparable

Table of Contents

period of 2007 also contributed significantly to the negative variance in refining margin per barrel of crude throughput over the comparable periods. Partially offsetting the negative effects of refined fuels basis and the impact of FIFO inventory changes was a 10% increase in the NYMEX 2-1-1 crack spread (\$1.21 per barrel) over the comparable periods.

Direct Operating Expenses Exclusive of Depreciation and Amortization. Direct operating expenses for our petroleum operations include costs associated with the actual operations of our refinery, such as energy and utility costs, catalyst and chemical costs, repairs and maintenance (turnaround), labor and environmental compliance costs. Petroleum direct operating expenses (exclusive of depreciation and amortization) were \$37.1 million for the three months ended September 30, 2008 compared to direct operating expenses of \$29.5 million for the three months ended September 30, 2007. The increase of \$7.6 million for the three months ended September 30, 2008 compared to the three months ended September 30, 2007 was the result of increases in expenses associated with utilities and energy (\$4.7 million), production chemicals (\$2.8 million), labor (\$1.7 million), insurance (\$0.9 million), rent (\$0.4 million) and operating materials (\$0.4 million). These increases in direct operating expenses were partially offset by decreases in expenses associated with repairs and maintenance (\$2.5 million), taxes (\$1.1 million) and outside services (\$0.8 million). On a per barrel of crude throughput basis, direct operating expenses per barrel of crude oil throughput for the three months ended September 30, 2008 decreased to \$3.52 per barrel as compared to \$6.11 per barrel for the three months ended September 30, 2007.

Net Costs Associated with Flood. Petroleum net costs associated with flood for the three months ended September 30, 2008 recorded cost recoveries of approximated \$1.0 million as compared to expense of approximately \$28.6 million for the three months ended September 30, 2007. This cost recovery resulted primarily from the collection of \$15.0 million of insurance proceeds related to our environmental claim in excess of the environmental insurance receivable booked as recoverable for accounting purposes.

Depreciation and Amortization. Petroleum depreciation and amortization was \$15.6 million for the three months ended September 30, 2008 as compared to \$6.6 million for the three months ended September 30, 2007. This increase in petroleum depreciation and amortization for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 was primarily the result of a large capital project completed in February 2008.

Operating Income. Petroleum operating income was \$20.2 million for the three months ended September 30, 2008 as compared to operating income of \$19.4 million for the three months ended September 30, 2007. This increase of \$0.8 million from the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 was primarily the result of a significant decrease in refined fuels basis and a \$81.9 million negative variance in FIFO inventory valuation over the comparable periods. Additionally, increases in expenses associated with utilities and energy (\$4.7 million), production chemicals (\$2.8 million), labor (\$1.7 million), insurance (\$0.9 million), rent (\$0.4 million) and operating materials (\$0.4 million) also negatively impacted operating income over the comparable periods. These increases in direct operating expenses were partially offset by decreases in expenses associated with repairs and maintenance (\$2.5 million), taxes (\$1.1 million) and outside services (\$0.8 million).

Nitrogen Fertilizer Results of Operations for the Three Months Ended September 30, 2008

Net Sales. Nitrogen fertilizer net sales were \$74.2 million for the three months ended September 30, 2008 compared to \$40.8 million for the three months ended September 30, 2007. The increase of \$33.4 million for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 was the result of higher plant gate prices (\$19.6 million), coupled with an increase in overall sales volumes (\$13.8 million).

In regard to product sales volumes for the three months ended September 30, 2008, our nitrogen fertilizer operations experienced a decrease of 11% in ammonia sales unit volumes (2,719 tons) and an increase of 37% in UAN sales unit

volumes (44,755 tons). On-stream factors (total number of hours operated divided by total hours in the reporting period) for all units gasification, ammonia and UAN plant were significantly greater than on-stream factors for the comparable period. During the three months ended September 30, 2007, all three primary nitrogen fertilizer units experienced eighteen days of downtime associated with the flood. In addition, the UAN plant also experienced unscheduled downtime for repairs and maintenance. It is typical to experience brief outages in complex

Table of Contents

manufacturing operations such as our nitrogen fertilizer plant which result in less than one hundred percent on-stream availability for one or more specific units.

Plant gate prices are prices FOB the delivery point less any freight cost we absorb to deliver the product. We believe plant gate price is meaningful because we sell products both FOB our plant gate (sold plant) and FOB the customer's designated delivery site (sold delivered) and the percentage of sold plant versus sold delivered can change month to month or three months to three months. The plant gate price provides a measure that is consistently comparable period to period. Plant gate prices for the three months ended September 30, 2008 for ammonia and UAN were greater than plant gate prices for the comparable period of 2007 by 89% and 38%, respectively. This dramatic increase in nitrogen fertilizer prices was not the direct result of an increase in natural gas prices, but rather the result of increased demand for nitrogen-based fertilizers due to the historically low ending stocks of global grains and a surge in prices for corn, wheat and soybeans, the primary crops in our region. This increase in demand for nitrogen-based fertilizer has created an environment in which nitrogen fertilizer prices have disconnected from their traditional correlation to natural gas prices.

The demand for fertilizer is affected by the aggregate crop planting decisions and fertilizer application rate decisions of individual farmers. Individual farmers make planting decisions based largely on the prospective profitability of a harvest, while the specific varieties and amounts of fertilizer they apply depend on factors like crop prices, their current liquidity, soil conditions, weather patterns and the types of crops planted.

Cost of Product Sold Exclusive of Depreciation and Amortization. Cost of product sold (exclusive of depreciation and amortization) is primarily comprised of pet coke expense and freight and distribution expenses. Cost of product sold (excluding depreciation and amortization) for the three months ended September 30, 2008 was \$6.2 million compared to \$3.7 million for the three months ended September 30, 2007. The increase of \$2.5 million for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 was primarily the result of a change in intercompany accounting for hydrogen reimbursement. For the three months ended September 30, 2007, hydrogen reimbursement was included in cost of product sold (exclusive of depreciation and amortization). For the three months ended September 30, 2008, hydrogen has been included in net sales. These amounts eliminate in consolidation. Hydrogen is transferred from our nitrogen fertilizer operations to our petroleum operations to facilitate sulfur recovery in the ultra low sulfur diesel production unit. This transfer of hydrogen has virtually been eliminated with the completion and operation of the CCR at the refinery.

Direct Operating Expenses Exclusive of Depreciation and Amortization. Direct operating expenses for our nitrogen fertilizer operations include costs associated with the actual operations of our nitrogen plant, such as repairs and maintenance, energy and utility costs, catalyst and chemical costs, outside services, labor and environmental compliance costs. Nitrogen direct operating expenses (exclusive of depreciation and amortization) for the three months ended September 30, 2008 were \$19.4 million as compared to \$14.9 million for the three months ended September 30, 2007. The increase of \$4.5 million for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 was primarily the result of increases in expenses associated with property taxes (\$2.5 million), outside services (\$1.3 million), utilities (\$0.9 million), catalyst (\$0.7 million), refractory (\$0.3 million), insurance (\$0.2 million), turnaround (\$0.1 million) and slag disposal (\$0.1 million). These increases in direct operating expenses were partially offset by decreases in expenses associated with repairs and maintenance (\$1.1 million) and royalties and other (\$0.8 million).

Depreciation and Amortization. Nitrogen fertilizer depreciation and amortization increased to \$4.5 million for the three months ended September 30, 2008 as compared to \$3.6 million for the three months ended September 30, 2007.

Net Costs Associated with Flood. Nitrogen net costs associated with flood for the three months ended September 30, 2007 was approximately \$1.9 million. There were no costs associated with the flood for the three months ended

September 30, 2008.

Operating Income. Nitrogen fertilizer operating income was \$46.5 million for the three months ended September 30, 2008 as compared to operating income of \$13.8 million for the three months ended September 30, 2007. This increase of \$32.7 million for the three months ended September 30, 2008 as compared to the three months ended September 30, 2007 was primarily the result of increased fertilizer prices and sales volumes over the

Table of Contents

comparable periods. Mitigating the increased fertilizer prices and sales volumes over the comparable periods were increases in direct operating expenses associated with property taxes (\$2.5 million), outside services (\$1.3 million), utilities (\$0.9 million), catalyst (\$0.7 million), refractory (\$0.3 million), insurance (\$0.2 million), turnaround (\$0.1 million) and slag disposal (\$0.1 million). These increases in direct operating expenses were partially offset by decreases in expenses associated with repairs and maintenance (\$1.1 million) and royalties and other (\$0.8 million).

Nine Months Ended September 30, 2008 Compared to the Nine Months Ended September 30, 2007***Consolidated Results of Operations***

Net Sales. Consolidated net sales were \$4,316.4 million for the nine months ended September 30, 2008 compared to \$1,819.9 million for the nine months ended September 30, 2007. The increase of \$2,496.5 million for the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 was primarily due to an increase in petroleum net sales of \$2,430.6 million that resulted from higher sales volumes (\$1,623.1 million), coupled with higher product prices (\$807.5 million). In addition, nitrogen fertilizer net sales increased \$80.5 million for the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 due to higher sales volumes (\$19.3 million), higher plant gate prices (\$53.3 million) and a change in intercompany accounting for hydrogen from cost of product sold (exclusive of depreciation and amortization) to net sales (\$7.9 million) over the comparable periods, which eliminates in consolidation.

Cost of Product Sold Exclusive of Depreciation and Amortization. Consolidated cost of product sold (exclusive of depreciation and amortization) was \$3,764.0 million for the nine months ended September 30, 2008 as compared to \$1,326.6 million for the nine months ended September 30, 2007. The increase of \$2,437.4 million for the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 was primarily due to the refinery turnaround that began in February 2007 and was completed in April 2007 and refinery downtime resulting from the flood. In addition to the impact of the turnaround and the flood, higher crude oil prices, increased sales volumes and the impact of FIFO accounting impacted cost of product sold during the comparable periods. Our average cost per barrel of crude oil for the nine months ended September 30, 2008 was \$110.10, compared to \$60.90 for the comparable period of 2007, an increase of 81%. Sales volume of refined fuels increased 70% for the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 principally due to the turnaround and refinery downtime resulting from the flood.

Direct Operating Expenses Exclusive of Depreciation and Amortization. Consolidated direct operating expenses (exclusive of depreciation and amortization) were \$179.5 million for the nine months ended September 30, 2008 as compared to \$218.8 million for the nine months ended September 30, 2007. This decrease of \$39.3 million for the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 was due to a decrease in petroleum direct operating expenses of \$50.6 million, primarily related to the refinery turnaround, partially offset by an increase in nitrogen fertilizer direct operating expenses of \$11.3 million.

Selling, General and Administrative Expenses Exclusive of Depreciation and Amortization. Consolidated selling, general and administrative expenses were \$20.5 million for the nine months ended September 30, 2008 as compared to \$42.1 million for the nine months ended September 30, 2007. This variance was primarily the result of decreases in share-based compensation (\$41.3 million) which was partially offset by increases in expenses associated with outside services (\$5.8 million), bad debt reserve (\$3.9 million), the write-off of deferred CVR Partners, LP initial public offering costs (\$2.5 million), administrative labor (\$2.3 million), other selling, general, and administrative expenses (\$2.0 million), asset write-off (\$0.9 million), insurance (\$0.9 million) and office costs (\$0.6 million).

Net Costs Associated with Flood. Consolidated net costs associated with the flood for the nine months ended September 30, 2008 approximated \$8.8 million as compared to \$34.3 for the nine months ended September 30, 2007.

Depreciation and Amortization. Consolidated depreciation and amortization was \$61.3 million for the nine months ended September 30, 2008 as compared to \$42.7 million for the nine months ended September 30, 2007. The increase of \$18.6 million for the nine months ended September 30, 2008 as compared to the nine months ended

Table of Contents

September 30, 2007 was primarily the result of the expansion completed in April 2007 and a significant capital project completed in February 2008 in the petroleum business.

Operating Income. Consolidated operating income was \$282.3 million for the nine months ended September 30, 2008 as compared to operating income of \$155.4 million for the nine months ended September 30, 2007. For the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007, petroleum operating income increased by \$63.4 million and nitrogen fertilizer operating income increased by \$60.7 million.

Interest Expense. Consolidated interest expense for the nine months ended September 30, 2008 was \$30.1 million as compared to interest expense of \$46.0 million for the nine months ended September 30, 2007. This 35% decrease for the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 primarily resulted from an overall decrease in the index rates (primarily LIBOR) and a decrease in average borrowings outstanding during the nine months ended September 30, 2008. Additionally, consolidated interest expense during the nine months ended September 30, 2008 benefited from decreases in the applicable margins under our Credit Facility dated December 28, 2006 as compared to the applicable margin in effect during the nine months ended September 30, 2007. See *Liquidity and Capital Resources Debt*. Partially offsetting these positive impacts on consolidated interest expense was a \$7.7 million decrease in capitalized interest over the comparable period due to the decrease of capital projects in progress during the nine months ended September 30, 2008.

Interest Income. Interest income was \$1.6 million for the nine months ended September 30, 2008 as compared to \$0.8 million for the nine months ended September 30, 2007.

Gain (Loss) on Derivatives, net. We have determined that the Cash Flow Swap and our other derivative instruments do not qualify as hedges for hedge accounting purposes under SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*. For the nine months ended September 30, 2008, we incurred a \$50.5 million net loss on derivatives as compared to a \$251.9 million loss on derivatives for the nine months ended September 30, 2007. This significant decrease in loss on derivatives, net for the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 was primarily attributable to the realized and unrealized losses on our Cash Flow Swap. Realized losses on the Cash Flow Swap for the nine months ended September 30, 2008 and the nine months ended September 30, 2007 were \$107.7 million and \$142.6 million, respectively. The decrease in realized losses over the comparable periods was primarily the result of lower average crack spreads for the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007. Unrealized gains or losses represent the change in the mark-to-market value on the unrealized portion of the Cash Flow Swap based on changes in the forward NYMEX crack spread that is the basis for the Cash Flow Swap. In addition to the mark-to-market value of the Cash Flow Swap, the outstanding term of the Cash Flow Swap at the end of each period also affects the impact that the changes in the forward NYMEX crack spread may have on the unrealized gain or loss. As of September 30, 2008, the Cash Flow Swap had a remaining term of approximately one year and nine months whereas as of September 30, 2007, the remaining term on the Cash Flow Swap was approximately two years and nine months. As a result of those shorter remaining term as of June 30, 2008, a similar change in the forward NYMEX crack spread will have a smaller impact on the unrealized gain or loss. Unrealized gains on our Cash Flow Swap for the nine months ended September 30, 2008 were \$69.1 million. In contrast, the unrealized losses on the Cash Flow Swap for the nine months ended September 30, 2007 were \$98.3 million.

Provision for Income Taxes. Income tax expense for the nine months ended September 30, 2008 was approximately \$51.3 million, or 25.1% of earnings before income taxes, as compared to income tax benefit of approximately \$98.2 million, or 69.3%, for the nine months ended September 30, 2007. The annualized effective tax rate for 2008, which was applied to earnings before income taxes for the nine month period ended September 30, 2008, is lower than the comparable annualized effective tax rate for 2007, which was applied to loss before income taxes for the nine month period ended September 30, 2007, primarily due to the correlation between the amount of income tax credits

which were projected to be generated in 2007 in comparison with the projected pre-tax loss for 2007.

Minority Interest in (income) loss of Subsidiaries. Minority interest in income of subsidiaries for the nine months ended September 30, 2007 was \$0.2 million. Minority interest in the 2007 period related to common stock in two of our subsidiaries owned by our chief executive officer.

Table of Contents

Net Income (Loss). For the nine months ended September 30, 2008, net income was \$152.9 million as compared to a net loss of \$43.1 million for the nine months ended September 30, 2007.

Petroleum Results of Operations for the Nine Months Ended September 30, 2008

Net Sales. Petroleum net sales were \$4,137.9 million for the nine months ended September 30, 2008 compared to \$1,707.3 million for the nine months ended September 30, 2007. The increase of \$2,430.6 million from the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 was primarily the result of significantly higher sales volumes (\$1,623.1 million) and increased product prices (\$807.5 million). Overall sales volumes of refined fuels for the nine months ended September 30, 2008 increased 70% as compared to the nine months ended September 30, 2007. The increased sales volume resulted primary from a significant decrease in refined fuel production volumes over the nine months ended September 30, 2007 due to the refinery turnaround which began in February 2007 and was completed in April 2007 and refinery downtime resulting from the flood. Our average sales price per gallon for the nine months ended September 30, 2008 for gasoline of \$2.87 and distillate of \$3.33 increased by 34% and 57%, respectively, as compared to the nine months ended September 30, 2007.

Cost of Product Sold Exclusive of Depreciation and Amortization. Cost of product sold includes cost of crude oil, other feedstocks and blendstocks, purchased products for resale and transportation and distribution costs. Petroleum cost of product sold (exclusive of depreciation and amortization) was \$3,758.4 million for the nine months ended September 30, 2008 compared to \$1,319.2 million for the nine months ended September 30, 2007. The increase of \$2,439.2 million from the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 was primarily the result of a significant increase in crude throughput due to the refinery turnaround which began in February 2007 and was completed in April 2007 and refinery downtime resulting from the flood. In addition to the impact of the turnaround, higher crude oil prices, increased sales volumes and the impact of FIFO accounting impacted cost of product sold during the comparable periods. Our average cost per barrel of crude oil for the nine months ended September 30, 2008 was \$110.10, compared to \$60.90 for the comparable period of 2007, an increase of 81%. Sales volume of refined fuels increased 70% for the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 principally due to the turnaround and the downtime resulting from the flood. In addition, under our FIFO accounting method, changes in crude oil prices can cause fluctuations in the inventory valuation of our crude oil, work in process and finished goods, thereby resulting in FIFO inventory gains when crude oil prices increase and FIFO inventory losses when crude oil prices decrease. For the nine months ended September 30, 2008, we reported a favorable FIFO impact of \$25.9 million compared to a favorable FIFO impact of \$36.9 million for the comparable period of 2007.

Refining margin per barrel of crude throughput decreased to \$12.75 for the nine months ended September 30, 2008 from \$21.93 for the nine months ended September 30, 2007 primarily due to the unfavorable regional differences between gasoline and distillate prices in our primary marketing region (the Coffeyville supply area) and those of the NYMEX. The average gasoline basis for the nine months ended September 30, 2008 decreased by \$5.49 per barrel to a negative basis of (\$0.81) per barrel compared to \$4.68 per barrel in the comparable period of 2007. The average distillate basis for the nine months ended September 30, 2008 decreased by \$5.60 per barrel to \$4.17 per barrel compared to \$9.77 per barrel in the comparable period of 2007. Also contributing to the reduced refining margin per barrel was the 9% decrease (\$1.36 per barrel) in the average NYMEX 2-1-1 crack spread over the comparable periods.

Direct Operating Expenses Exclusive of Depreciation and Amortization. Direct operating expenses for our Petroleum operations include costs associated with the actual operations of our refinery, such as energy and utility costs, catalyst and chemical costs, repairs and maintenance (turnaround), labor and environmental compliance costs. Petroleum direct operating expenses (exclusive of depreciation and amortization) were \$120.1 million for the nine months ended September 30, 2008 compared to direct operating expenses of \$170.7 million for the nine months ended September 30, 2007. The decrease of \$50.6 million for the nine months ended September 30, 2008 compared to the

nine months ended September 30, 2007 was the result of decreases in expenses associated with the refinery turnaround (\$76.8 million) and outside services (\$1.8 million). These decreases in direct operating expenses were partially offset by increases in expenses associated with energy and utilities (\$11.9 million), production chemicals (\$5.3 million), repairs and maintenance (\$4.6 million), insurance (\$1.7 million),

Table of Contents

environmental compliance (\$1.4 million), direct labor (\$0.7 million), rent and lease (\$0.5 million), operating materials (\$0.5 million) and property taxes (\$0.1 million). On a per barrel of crude throughput basis, direct operating expenses per barrel of crude throughput for the nine months ended September 30, 2008 decreased to \$4.04 per barrel as compared to \$9.64 per barrel for the nine months ended September 30, 2007 principally due to refinery turnaround expenses and the related downtime associated with the turnaround and its impact on overall production volume and downtime resulting from the flood.

Net Costs Associated with Flood. Petroleum net costs associated with the flood for the nine months ended September 30, 2008 approximated \$7.9 million as compared to \$30.6 million for the nine months ended September 30, 2007.

Depreciation and Amortization. Petroleum depreciation and amortization was \$46.8 million for the nine months ended September 30, 2008 as compared to \$29.7 million for the nine months ended September 30, 2007. The increase of \$17.1 million for the nine months ended September 30, 2008 compared to the nine months ended September 30, 2007 was primarily the result of the completion of the expansion in April 2007 and a significant capital project completed in February 2008.

Operating Income. Petroleum operating income was \$185.7 million for the nine months ended September 30, 2008 as compared to operating income of \$122.3 million for the nine months ended September 30, 2007. This increase of \$63.4 million from the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 was primarily the result of the refinery turnaround which began in February 2007 and was completed in April 2007 and refinery downtime resulting from the flood. The turnaround and the flood negatively impacted daily refinery crude throughput and refined fuels production. In addition, direct operating expenses decreased substantially during the nine months ended September 30, 2008 primarily due to decreases in expenses associated with the refinery turnaround (\$76.8 million) and outside services (\$1.8 million). These decreases in direct operating expenses were partially offset by increases in expenses associated with energy and utilities (\$11.9 million), production chemicals (\$5.3 million), repairs and maintenance (\$4.6 million), insurance (\$1.7 million), environmental compliance (\$1.4 million), direct labor (\$0.7 million), rent and lease (\$0.5 million), operating materials (\$0.5 million) and property taxes (\$0.1 million).

Nitrogen Fertilizer Results of Operations for the Nine Months Ended September 30, 2008

Net Sales. Nitrogen fertilizer net sales were \$195.6 million for the nine months ended September 30, 2008 compared to \$115.1 million for the nine months ended September 30, 2007. The increase of \$80.5 million from the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 was the result of higher plant gate prices (\$53.3 million), coupled with an increase in overall sales volumes (\$19.3 million) and a change in intercompany accounting for hydrogen from cost of product sold (exclusive of depreciation and amortization) to net sales (\$7.9 million) over the comparable periods, which eliminates in consolidation.

In regard to product sales volumes for the nine months ended September 30, 2008, our nitrogen operations experienced an increase of 11% in ammonia sales unit volumes (6,456 tons) and an increase of 12% in UAN sales unit volumes (47,824 tons). On-stream factors (total number of hours operated divided by total hours in the reporting period) for all units, gasification, ammonia and UAN plant were greater than the comparable period, primarily due to unscheduled downtime and nitrogen plant downtime resulting from the flood. It is typical to experience brief outages in complex manufacturing operations such as our nitrogen fertilizer plant which result in less than one hundred percent on-stream availability for one or more specific units.

Plant gate prices are prices FOB the delivery point less any freight cost we absorb to deliver the product. We believe plant gate price is meaningful because we sell products both FOB our plant gate (sold plant) and FOB the customer's

designated delivery site (sold delivered) and the percentage of sold plant versus sold delivered can change month to month or six months to six months. The plant gate price provides a measure that is consistently comparable period to period. Plant gate prices for the nine months ended September 30, 2008 for ammonia were greater than plant gate prices for the comparable period of 2007 by 59%. Similarly, UAN plant gate prices for the nine months ending September 30, 2008 were greater than the comparable period of 2007 by 46%. This dramatic increase in nitrogen fertilizer prices was not the direct result of an increase in natural gas prices, but rather the result of increased demand for nitrogen-based fertilizers due to the historically low ending stocks of global grains and a

Table of Contents

surge in prices for corn, wheat and soybeans, the primary crops in our region. This increase in demand for nitrogen-based fertilizer has created an environment in which nitrogen fertilizer prices have disconnected from their traditional correlation to natural gas prices.

The demand for fertilizer is affected by the aggregate crop planting decisions and fertilizer application rate decisions of individual farmers. Individual farmers make planting decisions based largely on the prospective profitability of a harvest, while the specific varieties and amounts of fertilizer they apply depend on factors like crop prices, their current liquidity, soil conditions, weather patterns and the types of crops planted.

Cost of Product Sold Exclusive of Depreciation and Amortization. Cost of product sold (exclusive of depreciation and amortization) is primarily comprised of pet coke expense, freight and distribution expenses. Cost of product sold excluding depreciation and amortization for the nine months ended September 30, 2008 was \$21.9 million compared to \$9.9 million for the nine months ended September 30, 2007. The increase of \$12.0 million for the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 was primarily the result of a change in intercompany accounting for hydrogen reimbursement (\$10.6 million) and a \$3.1 million increase in freight expense over the comparable periods. For the nine months ended September 30, 2007, hydrogen reimbursement was included in cost of product sold (exclusive of depreciation and amortization). For the nine months ended September 30, 2008, hydrogen has been included in net sales. These amounts eliminate in consolidation. Hydrogen is transferred from our nitrogen fertilizer operations to our petroleum operations to facilitate sulfur recovery in the ultra low sulfur diesel production unit. This transfer of hydrogen has virtually been eliminated with the completion and operation of the CCR at the refinery.

Direct Operating Expenses Exclusive of Depreciation and Amortization. Direct operating expenses for our Nitrogen fertilizer operations include costs associated with the actual operations of our nitrogen plant, such as repairs and maintenance, energy and utility costs, catalyst and chemical costs, outside services, labor and environmental compliance costs. Nitrogen direct operating expenses (exclusive of depreciation and amortization) for the nine months ended September 30, 2008 were \$59.4 million as compared to \$48.1 million for the nine months ended September 30, 2007. The increase of \$11.3 million for the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 was primarily the result of increases in expenses associated with property taxes (\$7.4 million), outside services (\$2.2 million), catalyst (\$2.0 million), repairs and maintenance (\$0.7 million), slag disposal (\$0.4 million), refractory (\$0.3 million), insurance (\$0.3 million) and direct labor (\$0.3 million). These increases in direct operating expenses were partially offset by reductions in expenses associated with royalties and other (\$2.3 million), environmental compliance (\$0.2 million), equipment rental (\$0.1 million) and utilities (\$0.1 million).

Net Costs Associated with Flood. The nitrogen fertilizer operations did not record any costs associated with the flood for the nine months ended September 30, 2008 as compared to \$2.0 million for the nine months ended September 30, 2007.

Depreciation and Amortization. Nitrogen fertilizer depreciation and amortization increased to \$13.4 million for the nine months ended September 30, 2008 as compared to \$12.4 million for the nine months ended September 30, 2007.

Operating Income. Nitrogen fertilizer operating income was \$95.6 million for the nine months ended September 30, 2008 as compared to \$34.9 million for the nine months ended September 30, 2007. This increase of \$60.7 million for the nine months ended September 30, 2008 as compared to the nine months ended September 30, 2007 was the result of increased sales volumes (\$27.2 million), coupled with higher plant gate prices for both UAN and ammonia (\$53.3 million). Partially offsetting the positive effects of sales volumes and higher plant gate prices were increased direct operating expenses primarily the result of increases in expenses associated with property taxes (\$7.4 million), outside services (\$2.2 million), catalyst (\$2.0 million), repairs and maintenance (\$0.7 million), slag disposal

(\$0.4 million), refractory (\$0.3 million), insurance (\$0.3 million) and direct labor (\$0.3 million). These increases in direct operating expenses were partially offset by reductions in expenses associated with royalties and other (\$2.3 million), environmental compliance (\$0.2 million), equipment rental (\$0.1 million) and utilities (\$0.1 million).

Table of Contents

Liquidity and Capital Resources

Our primary sources of liquidity currently consist of cash generated from our operating activities, existing cash and cash equivalent balances, our existing revolving credit facility and third party guarantees of obligations under the Cash Flow Swap. Our ability to generate sufficient cash flows from our operating activities will continue to be primarily dependent on producing or purchasing, and selling, sufficient quantities of refined products at margins sufficient to cover fixed and variable expenses.

As of September 30, 2008, total outstanding debt under our credit facility was \$485.5 million. There was no balance outstanding under our revolving credit facility. As of November 6, 2008, total outstanding debt under our credit facility was \$484.3 million, which was all term debt. As of September 30, 2008, we had cash, cash equivalents and short-term investments of \$59.9 million and up to \$115.1 million available under our revolving credit facility. As of November 6, 2008, we had cash, cash equivalents and short-term investments of \$54.3 million and up to \$115.1 million available under our revolving credit facility. In the current crude oil price environment, working capital is subject to substantial variability from week-to-week and month-to-month. The payable to swap counterparty included in the consolidated balance sheet at September 30, 2008 was approximately \$264.5 million, and the current portion included a decrease of \$25.8 million from December 31, 2007, resulting in an equal increase in our working capital for the same period.

On June 30, 2007, our refinery and the nitrogen fertilizer plant were severely flooded and forced to conduct emergency shutdowns and evacuate. See Note 10, Flood, Crude Oil Discharge and Insurance Related Matters. Our liquidity was significantly negatively impacted as a result of the reduction in cash provided by operations due to our temporary cessation of operations and the additional expenditures associated with the flood and crude oil discharge. In order to provide immediate and future liquidity, on August 23, 2007 we deferred payments of \$123.7 million which were due to J. Aron under the terms of the Cash Flow Swap. We entered into a letter agreement with J. Aron on July 29, 2008 to defer to December 15, 2008 the payment of \$87.5 million of the \$123.7 million plus accrued interest. On August 29, 2008 we paid \$36.2 of the remaining balance to J. Aron, as well as \$7.1 million in accrued interest.

Subsequent to the quarter end, we paid an additional \$15.0 million through use of proceeds received on the environmental insurance policy. The deferral agreement with J. Aron was further amended on October 11, 2008 and the outstanding balance of \$72.5 million on that date was further deferred to July 31, 2009. Additional proceeds of \$9.8 million received under the property insurance policy subsequent to October 11, 2008 were used to pay down the principle balance on the deferral amount to \$62.7 million as of November 6, 2008.

We paid J. Aron \$33.8 million on October 7, 2008 for settlement of our realized losses with respect to the Cash Flow Swap for the quarter ended September 30, 2008.

The crude oil intermediation agreement with J. Aron expires on December 31, 2008. We are currently negotiating with multiple parties to enter into a new intermediation agreement to replace the J. Aron agreement. There can be no assurance that we will be able to enter into a new agreement on favorable terms, on a timely basis, or at all.

Our liquidity is significantly effected by the market price of crude oil. Higher crude oil prices hurt our liquidity and lower crude oil prices enhance our liquidity. Given the reduction in crude oil prices in the third quarter of 2008 and thereafter, we elected to withdraw our convertible notes offering registration statement from the SEC as we concluded that such offering was no longer necessary.

We believe that our cash flows from operations, borrowings under our revolving credit facility, third party guarantees under the Cash Flow Swap and other capital resources will be sufficient to satisfy the anticipated cash requirements associated with our existing operations for at least the next 12 months. However, our future capital expenditures and

other cash requirements could be higher than we currently expect as a result of various factors, such as increased crude oil prices. Additionally, our ability to generate sufficient cash from our operating activities depends on our future performance, which is subject to general economic, political, financial, competitive, and other factors beyond our control.

Table of Contents

Debt

Credit Facility

On December 28, 2006, our subsidiary CRLLC entered into a Credit Facility which provided financing of up to \$1.075 billion. The Credit Facility consisted of \$775.0 million of tranche D term loans, a \$150.0 million revolving credit facility, and a funded letter of credit facility of \$150.0 million issued in support of the Cash Flow Swap. On October 26, 2007, we repaid \$280.0 million of the tranche D term loans with proceeds from our initial public offering. The Credit Facility is guaranteed by all of our subsidiaries and is secured by substantially all of their assets including the equity of our subsidiaries on a first-lien priority basis.

The tranche D term loans outstanding are subject to quarterly principal amortization payments of 0.25% of the outstanding balance commencing on April 1, 2007 and increasing to 23.5% of the outstanding principal balance on April 1, 2013 and the next two quarters, with a final payment of the aggregate outstanding balance on December 28, 2013.

The revolving loan facility of \$150.0 million provides for direct cash borrowings for general corporate purposes and on a short-term basis. Letters of credit issued under the revolving loan facility are subject to a \$75.0 million sub-limit. The revolving loan commitment expires on December 28, 2012. The borrower has an option to extend this maturity upon written notice to the lenders; however, the revolving loan maturity cannot be extended beyond the final maturity of the term loans, which is December 28, 2013. As of September 30, 2008, we had available \$115.1 million under the revolving credit facility.

The \$150.0 million funded letter of credit facility provides credit support for our obligations under the Cash Flow Swap. The funded letter of credit facility is fully cash collateralized by the funding by the lenders of cash into a credit linked deposit account. This account is held by the funded letter of credit issuing bank. Contingent upon the requirements of the Cash Flow Swap, the borrower has the ability to reduce the funded letter of credit at any time upon written notice to the lenders. The funded letter of credit facility expires on December 28, 2010.

The Credit Facility incorporates the following pricing by facility type:

Tranche D term loans bear interest at either (a) the greater of the prime rate and the federal funds effective rate plus 0.5%, plus in either case 2.25%, or, at the borrower's option, (b) LIBOR plus 3.25% (with step-downs to the prime rate/federal funds rate plus 1.75% or 1.50% or LIBOR plus 2.75% or 2.50%, respectively, upon achievement of certain rating conditions).

Revolving loan borrowings bear interest at either (a) the greater of the prime rate and the federal funds effective rate plus 0.5%, plus in either case 2.25%, or, at the borrower's option, (b) LIBOR plus 3.25% (with step-downs to the prime rate/federal funds rate plus 1.75% or 1.50% or LIBOR plus 2.75% or 2.50%, respectively, upon achievement of certain rating conditions).

Letters of credit issued under the \$75.0 million sub-limit available under the revolving loan facility are subject to a fee equal to the applicable margin on revolving LIBOR loans owing to all revolving lenders and a fronting fee of 0.25% per annum owing to the issuing lender.

Funded letters of credit are subject to a fee equal to the applicable margin on term LIBOR loans owed to all funded letter of credit lenders and a fronting fee of 0.125% per annum owing to the issuing lender. The borrower is also obligated to pay a fee of 0.10% to the administrative agent on a quarterly basis based on the average balance of funded letters of credit outstanding during the calculation period, for the maintenance of a

credit-linked deposit account backstopping funded letters of credit.

In addition to the fees stated above, the Credit Facility requires the borrower to pay 0.50% per annum in commitment fees on the unused portion of the revolving loan facility.

The Credit Facility requires the borrower to prepay outstanding loans, subject to certain exceptions, with:

100% of the net asset sale proceeds received from specified asset sales and net insurance/condemnation proceeds, if the borrower does not reinvest those proceeds in assets to be used in its business or make other permitted investments within 12 months or if, within 12 months of receipt, the borrower does not contract to

Table of Contents

reinvest those proceeds in assets to be used in its business or make other permitted investments within 18 months of receipt, each subject to certain limitations;

100% of the cash proceeds from the incurrence of specified debt obligations; and

75% of consolidated excess cash flow less 100% of voluntary prepayments made during the fiscal year; provided that with respect to any fiscal year commencing with fiscal 2008 this percentage will be reduced to 50% if the total leverage ratio at the end of such fiscal year is less than 1.50:1.00 or 25% if the total leverage ratio as of the end of such fiscal year is less than 1.00:1.00.

Mandatory prepayments will be applied first to the term loan, second to the swing line loans, third to the revolving loans, fourth to outstanding reimbursement obligations with respect to revolving letters of credit and funded letters of credit, and fifth to cash collateralize revolving letters of credit and funded letters of credit. Voluntary prepayments of loans under the Credit Facility are permitted, in whole or in part, at the borrower's option, without premium or penalty.

The Credit Facility contains customary covenants. These agreements, among other things, restrict, subject to certain exceptions, the ability of CRLLC and its subsidiaries to incur additional indebtedness, create liens on assets, make restricted junior payments, enter into agreements that restrict subsidiary distributions, make investments, loans or advances, engage in mergers, acquisitions or sales of assets, dispose of subsidiary interests, enter into sale and leaseback transactions, engage in certain transactions with affiliates and stockholders, change the business conducted by the credit parties, and enter into hedging agreements. The Credit Facility provides that CRLLC may not enter into commodity agreements if, after giving effect thereto, the exposure under all such commodity agreements exceeds 75% of Actual Production (the borrower's estimated future production of refined products based on the actual production for the three prior months) or for a term of longer than six years from December 28, 2006. In addition, the borrower may not enter into material amendments related to any material rights under the Cash Flow Swap or the Partnership's partnership agreement without the prior written approval of the lenders. These limitations are subject to critical exceptions and exclusions and are not designed to protect investors in our common stock.

The Credit Facility also requires the borrower to maintain certain financial ratios as follows:

Fiscal Quarter Ending	Minimum Interest Coverage Ratio	Maximum Leverage Ratio
September 30, 2008	3.25:1.00	2.75:1.00
December 31, 2008	3.25:1.00	2.50:1.00
March 31, 2009 and thereafter	3.75:1.00	2.25:1.00 to December 31, 2009, 2.00:1.00 thereafter

The computation of these ratios is governed by the specific terms of the Credit Facility and may not be comparable to other similarly titled measures computed for other purposes or by other companies. The minimum interest coverage ratio is the ratio of consolidated adjusted EBITDA to consolidated cash interest expense over a four quarter period. The maximum leverage ratio is the ratio of consolidated total debt to consolidated adjusted EBITDA over a four quarter period. The computation of these ratios requires a calculation of consolidated adjusted EBITDA. In general, under the terms of our Credit Facility, consolidated adjusted EBITDA is calculated by adding consolidated net income, consolidated interest expense, income taxes, depreciation and amortization, other non-cash expenses, any

fees and expenses related to permitted acquisitions, any non-recurring expenses incurred in connection with the issuance of debt or equity, management fees, any unusual or non-recurring charges up to 7.5% of consolidated adjusted EBITDA, any net after-tax loss from disposed or discontinued operations, any incremental property taxes related to abatement non-renewal, any losses attributable to minority equity interests and major scheduled turnaround expenses. As of September 30, 2008, we were in compliance with our covenants under the Credit Facility.

We present consolidated adjusted EBITDA because it is a material component of material covenants within our current Credit Facility and significantly impacts our liquidity and ability to borrow under our revolving line of

Table of Contents

credit. However, consolidated adjusted EBITDA is not a defined term under GAAP and should not be considered as an alternative to operating income or net income as a measure of operating results or as an alternative to cash flows as a measure of liquidity. Consolidated adjusted EBITDA is calculated under the Credit Facility as follows:

	Three Months Ended		Nine Months Ended	
	September 30,		September 30,	
	2008	2007	2008	2007
	(Unaudited in millions)		(Unaudited in millions)	
Consolidated Financial Results				
Net income (loss)	\$ 99.7	\$ 11.2	\$ 152.9	\$ (43.1)
Plus:				
Depreciation and amortization	20.6	18.1	61.3	50.3
Interest expense and other financing costs	9.3	18.3	30.1	46.0
Income tax expense (benefit)	40.4	42.7	51.3	(98.2)
Funded letters of credit expense and interest rate swap not included in interest expense	2.3	0.7	5.6	0.9
Major scheduled turnaround expense	0.1		0.1	76.8
Unrealized gain (loss) on derivatives	(100.6)	(86.2)	(68.8)	103.8
Non-cash compensation expense for equity awards	(25.6)	4.5	(36.8)	11.3
Loss on disposition of fixed assets		0.1	1.6	1.2
Minority interest		0.1		(0.2)
Management fees		0.5		1.6
Unusual or non recurring charges			3.2	
Property tax increase due to expiration of abatement	7.4		7.4	
Adjusted EBITDA	\$ 53.6	\$ 10.0	\$ 207.9	\$ 150.4

In addition to the financial covenants summarized in the table above, the Credit Facility restricts the capital expenditures of CRLLC to \$125.0 million in 2008, \$125.0 million in 2009, \$80.0 million in 2010, and \$50.0 million in 2011 and thereafter. The capital expenditures covenant includes a mechanism for carrying over the excess of any previous year's capital expenditure limit. The capital expenditures limitation will not apply for any fiscal year commencing with fiscal 2009 if the borrower obtains a total leverage ratio of less than or equal to 1.25:1.00 for any quarter commencing with the quarter ended December 31, 2008. We believe the limitations on our capital expenditures imposed by the Credit Facility should allow us to meet our current capital expenditure needs. However, if future events require us or make it beneficial for us to make capital expenditures beyond those currently planned, we would need to obtain consent from the lenders under our Credit Facility.

The Credit Facility also contains customary events of default. The events of default include the failure to pay interest and principal when due, including fees and any other amounts owed under the Credit Facility, a breach of certain covenants under the Credit Facility, a breach of any representation or warranty contained in the Credit Facility, any default under any of the documents entered into in connection with the Credit Facility, the failure to pay principal or interest or any other amount payable under other debt arrangements in an aggregate amount of at least \$20.0 million, a breach or default with respect to material terms under other debt arrangements in an aggregate amount of at least \$20.0 million which results in the debt becoming payable or declared due and payable before its stated maturity, a breach or default under the Cash Flow Swap that would permit the holder or holders to terminate the Cash Flow Swap, events of bankruptcy, judgments and attachments exceeding \$20.0 million, events relating to employee benefit plans

resulting in liability in excess of \$20.0 million, a change in control, the guarantees, collateral documents or the Credit Facility failing to be in full force and effect or being declared null and void, any guarantor repudiating its obligations, the failure of the collateral agent under the Credit Facility to have a lien on any material portion of the collateral, and any party under the Credit Facility (other than the agent or lenders under the Credit Facility) contesting the validity or enforceability of the Credit Facility.

Table of Contents

Under the terms of our Credit Facility, our initial public offering was deemed a Qualified IPO because the offering generated at least \$250 million of gross proceeds and we used the proceeds of the offering to repay at least \$275.0 million of term loans under the Credit Facility. As a result of our Qualified IPO, the interest margin on LIBOR loans may in the future decrease from 3.25% to 2.75% (if we have credit ratings of B2/B) or 2.50% (if we have credit ratings of B1/B+). Interest on base rate loans will similarly be adjusted. In addition, as a result of our Qualified IPO, (1) we are allowed to borrow an additional \$225.0 million under the Credit Facility to finance capital enhancement projects if we are in pro forma compliance with the financial covenants in the Credit Facility and the rating agencies confirm our ratings, (2) we are allowed to pay an additional \$35.0 million of dividends each year, if our corporate family ratings are at least B2 from Moody's and B from S&P, (3) we will not be subject to any capital expenditures limitations commencing with fiscal 2009 if our total leverage ratio is less than or equal to 1.25:1 for any quarter commencing with the quarter ended December 31, 2008, and (4) we are allowed to reduce the Cash Flow Swap to not less than 35,000 barrels a day for fiscal 2008 and terminate the Cash Flow Swap for any year commencing with fiscal 2009, so long as our total leverage ratio is less than or equal to 1.25:1 and we have a corporate family rating of at least B2 from Moody's and B from S&P.

The Credit Facility is subject to an intercreditor agreement among the lenders and the Cash Flow Swap provider, which deal with, among other things, priority of liens, payments and proceeds of sale of collateral.

At September 30, 2008 and December 31, 2007, funded long-term debt, including current maturities, totaled \$485.5 million and \$489.2 million, respectively, of tranche D term loans. Other commitments at September 30, 2008 and December 31, 2007 included a \$150.0 million funded letter of credit facility and a \$150.0 million revolving credit facility. As of September 30, 2008, the commitment outstanding on the revolving credit facility was \$34.9 million, including no revolver borrowings, \$3.3 million in letters of credit in support of certain environmental obligations and \$31.6 million in letters of credit to secure transportation services for crude oil. As of December 31, 2007, the commitment outstanding on the revolving credit facility was \$39.4 million, including \$5.8 million in letters of credit in support of certain environmental obligations, \$3.0 million in support of surety bonds in place to support state and federal excise tax for refined fuels, and \$30.6 million in letters of credit to secure transportation services for crude oil.

Payment Deferrals Related to Cash Flow Swap

As a result of the flood and the temporary cessation of our operations on June 30, 2007, CRLLC entered into several deferral agreements with J. Aron with respect to the Cash Flow Swap, which is a series of commodity derivative arrangements whereby if crack spreads fall below a fixed level, J. Aron agreed to pay the difference to us, and if crack spreads rise above a fixed level, we agreed to pay the difference to J. Aron. These deferral agreements deferred to August 31, 2008 the payment of approximately \$123.7 million plus accrued interest. On July 29, 2008, CRLLC entered into a revised letter agreement with the J. Aron to defer further \$87.5 million of the deferred payment amounts under the 2007 deferral agreements to December 15, 2008. On August 29, 2008, in accordance with the additional deferral agreement, we paid \$36.2 million to J. Aron, as well as \$7.1 million in accrued interest as of that date resulting in a remaining balance due of \$87.5 million. As of September 30, 2008, the outstanding balance due was \$87.5 million and the related accrued interest was \$0.5 million. Subsequent to the September 30, 2008 quarter end, we paid an additional \$15.0 million received on the environmental insurance policy. The deferral agreement with J. Aron was further amended on October 11, 2008 and the outstanding balance of \$72.5 million on that date was further deferred to July 31, 2009. Additional proceeds of \$9.8 million received under the property insurance policy subsequent to October 11, 2008, were used to pay down the principle balance on the deferral amount to \$62.7 million as of November 6, 2008. The following is a summary of the various deferral agreements with J. Aron since June 2007.

On June 26, 2007, CRLLC and J. Aron entered into a letter agreement in which J. Aron deferred to August 7, 2007 a \$45.0 million payment which we owed to J. Aron under the Cash Flow Swap for the period ending June 30, 2007. We agreed to pay interest on the deferred amount at the rate of LIBOR plus 3.25%.

On July 11, 2007, CRLLC and J. Aron entered into a letter agreement in which J. Aron deferred to July 25, 2007 a separate \$43.7 million payment which we owed to J. Aron under the Cash Flow Swap for the period ending September 30, 2007. J. Aron deferred the \$43.7 million payment on the conditions that (a) each of GS

Table of Contents

Capital Partners V Fund, L.P. and Kelso Investment Associates VII, L.P. agreed to guarantee one half of the payment and (b) interest accrued on the \$43.7 million from July 9, 2007 to the date of payment at the rate of LIBOR plus 1.50%.

On July 26, 2007, CRLLC and J. Aron entered into a letter agreement in which J. Aron deferred to September 7, 2007 both the \$45.0 million payment due August 7, 2007 (and accrued interest) and the \$43.7 million payment due July 25, 2007 (and accrued interest). J. Aron deferred these payments on the conditions that (a) each of GS Capital Partners V Fund, L.P. and Kelso Investment Associates VII, L.P. agreed to guarantee one half of the payments and (b) interest accrued on the amounts from July 26, 2007 to the date of payment at the rate of LIBOR plus 1.50%.

On August 23, 2007, CRLLC and J. Aron entered into a letter agreement in which J. Aron deferred to January 31, 2008 the \$45.0 million payment due September 7, 2007 (and accrued interest), the \$43.7 million payment due September 7, 2007 (and accrued interest) and the \$35.0 million payment which we owed to J. Aron under the Cash Flow Swap to settle hedged volume through August 15, 2007. J. Aron deferred these payments (totaling \$123.7 million plus accrued interest) on the conditions that (a) each of GS Capital Partners V Fund, L.P. and Kelso Investment Associates VII, L.P. agreed to guarantee one half of the payments and (b) interest accrued on the amounts to the date of payment at the rate of LIBOR plus 1.50%.

On July 29, 2008, the Company entered into a revised letter agreement with J. Aron to defer further \$87.5 million of the deferred payment amounts owed under the 2007 deferral agreements. The unpaid deferred amounts and all accrued and unpaid interest were due and payable in full on December 15, 2008. If the Company incurred aggregate indebtedness in an aggregate principal amount of at least \$125.0 million by December 15, 2008, the maturity date would be automatically extended to July 31, 2009 provided also that there had been no default of the Company in the performance of its obligations under the revised letter agreement. GS and Kelso each agreed to guarantee one half of the deferred payment of \$87.5 million. The Company agreed to repay deferred amounts in an amount equal to the sum of \$36.2 million plus all accrued and unpaid interest (\$7.1 million as of August 29, 2008) by no later than August 31, 2008. On August 29, 2008, pursuant to the agreement, we paid J. Aron \$36.2 million plus \$7.1 million of accrued interest.

On October 11, 2008, the Company and J. Aron entered into a revised letter agreement to defer the outstanding balance of \$72.5 million and all accrued and unpaid interest to July 31, 2009. However, all accrued interest through December 15, 2008 must be paid on that day. Interest will accrue on the amounts deferred at the rate of (i) LIBOR plus 2.75% until December 15, 2008 and (ii) LIBOR plus 5.00%-7.50% (depending on J. Aron's cost of capital) from December 15, 2008 through the date of payment. CRLLC must make prepayments of \$5.0 million for the quarters ending March 31, 2009 and June 30, 2009 to reduce the deferred amounts. To the extent that CRLLC or any of its subsidiaries receives net insurance proceeds related to the July 2007 flood that they are not required to use to prepay CRLLC's credit agreement or permitted to invest pursuant to the terms of CRLLC's credit agreement, all net insurance proceeds will be used to prepay the deferred amounts. GS and Kelso each agreed to guarantee one half of the deferred payment obligations.

Capital Spending

In 2007, as a result of the flood, our refinery exceeded the required average annual gasoline sulfur standard as mandated by our approved hardship waiver with the EPA. In anticipation of a settlement with the EPA to resolve the non-compliance, the Company planned to spend \$28.0 million in capital required for interim compliance with the ultra low sulfur gasoline standards in 2008, ahead of the required full compliance date of January 1, 2011. As a result of continued discussions with the EPA and its verbal agreement to modify the required average annual gasoline sulfur standard as a result of the flood, approximately \$11.7 million of the originally planned capital spending of

\$28.0 million for the interim period has been deferred to 2009. Management is also evaluating whether any other capital spending projects can be deferred to a later date.

The Nitrogen Fertilizer business has been moving forward with an approximately \$120 million fertilizer plant expansion which was originally expected to be completed in July 2010. Most recently the expected completion date was delayed to December 2010. As of September 30, 2008 approximately \$21.6 million was incurred with respect to the fertilizer plant expansion. Management is currently evaluating whether to proceed with an expected

Table of Contents

completion date of December 2010 or to delay any further work on this project to a later date. Whether management decides to move forward depends on a number of factors including but not limited to current credit market conditions, further analysis and review of the costs of continued rail car shipments of ammonia as well as the expected premium on UAN sales.

We will continue to evaluate all proposed projects and the related capital plan and make modifications as deemed appropriate with the ever-changing market. We currently do not anticipate any significant modification will be made to the capital plan unless there is a decision to postpone the fertilizer plant expansion.

Cash Flows

The following table sets forth our cash flows for the periods indicated below (in millions):

	Nine Months Ended September 30, 2008 2007 (Unaudited)	
Net cash provided by (used in):		
Operating activities	\$ 104.8	\$ 165.7
Investing activities	(67.4)	(239.7)
Financing activities	(8.0)	59.4
Net increase (decrease) in cash and cash equivalents	\$ 29.4	\$ (14.6)

Cash Flows Provided by Operating Activities

Net cash flows from operating activities for the nine months ended September 30, 2008 was \$104.8 million compared to cash flows from operating activities for the nine months ended September 30, 2007 of \$165.7 million. The positive cash flow from operating activities generated over the nine months ended September 30, 2008 was primarily driven by net income, partially offset by unfavorable changes in trade working capital and other working capital over the period. For purposes of this cash flow discussion, we define trade working capital as accounts receivable, inventory and accounts payable. Other working capital is defined as all other current assets and liabilities except trade working capital. Net income for the period was not indicative of the operating margins for the period. This is the result of the accounting treatment of our derivatives in general and, more specifically, the Cash Flow Swap. We have determined that the Cash Flow Swap does not qualify as a hedge for hedge accounting purposes under SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*. Therefore, the net income for the nine months ended September 30, 2008 included both the realized losses and the unrealized gains on the Cash Flow Swap. Since the Cash Flow Swap had a significant term remaining as of September 30, 2008 (approximately one year and nine months), the unrealized gains on the Cash Flow Swap significantly increased our net income over this period. The impact of the realized losses and unrealized gains on the Cash Flow Swap is apparent in the \$86.1 million decrease in the payable to swap counterparty. Trade working capital for the nine months ended September 30, 2008 resulted in a use of cash of \$32.7 million. For the nine months ended September 30, 2008, accounts receivable increased \$47.5 million, inventory increased by \$11.4 million and accounts payable increased by \$26.2 million.

Net cash flows provided by operating activities for the nine months ended September 30, 2007 was \$165.7 million. The positive cash flow from operating activities during this period was primarily the result of favorable changes in

other working capital and trade working capital, partially offset by unfavorable changes in other assets and liabilities. Net loss for the period was not indicative of the operating margins for the period. This was the result of the accounting treatment of our derivatives in general and, more specifically, the Cash Flow Swap. We have determined that the Cash Flow Swap does not qualify as a hedge for hedge accounting purposes under SFAS No. 133, *Accounting for Derivative Instruments and Hedging Activities*. Therefore, the net loss for the nine months ended September 30, 2007 included both the realized losses and the unrealized losses on the Cash Flow Swap. Since the Cash Flow Swap had a significant term remaining as of September 30, 2007 (approximately two years and nine months), the realized and unrealized losses on the Cash Flow Swap significantly increased our net loss over this period. The impact of these realized and unrealized losses on the Cash Flow Swap is apparent in the \$230.9 million increase in the payable to swap

Table of Contents

counterparty. Adding to our operating cash flow for the nine months ended September 30, 2007 was a \$43.2 million source of cash related to a decrease in trade working capital. For the nine months ended September 30, 2007, accounts receivable decreased \$4.2 million, inventory increased \$48.4 million and accounts payable increased \$87.4 million.

Cash Flows Used in Investing Activities

Net cash used in investing activities for the nine months ended September 30, 2008 was \$67.4 million compared to \$239.7 million for the nine months ended September 30, 2007. The decrease in investing activities was the result of decreased capital expenditures associated with various capital projects that commenced in the first quarter of 2007 in conjunction with the refinery turnaround. The majority of these capital projects, with the exception of the continuous catalytic reforming unit, were completed during the nine months ended September 30, 2007.

Cash Flows Used In Financing Activities

Net cash used in financing activities for the nine months ended September 30, 2008 was \$8.0 million as compared to net cash provided by financing activities of \$59.4 million for the nine months ended September 30, 2007. During the nine months ended September 30, 2008, the principal use of cash related to scheduled principal payments of \$3.7 million on long-term debt. The primary sources of cash for the nine months ended September 30, 2007 were obtained through net borrowings under the revolving credit facility of \$20.0 million and borrowings obtained from the \$25.0 million secured and the \$25.0 million unsecured credit facilities obtained to provide additional liquidity during the completion of our restoration efforts for the refinery and nitrogen operations as a result of the flood. During the nine months ended September 30, 2007, we also paid \$3.9 million of scheduled principal payments on long-term debt.

Working Capital

Working capital at September 30, 2008, was \$73.6 million, consisting of \$607.9 million in current assets and \$534.3 million in current liabilities. Working capital at December 31, 2007 was \$10.7 million, consisting of \$570.2 million in current assets and \$559.5 million in current liabilities. In addition, we had available borrowing capacity under our revolving credit facility of \$115.1 million at September 30, 2008.

Letters of Credit

Our revolving credit facility provides for the issuance of letters of credit. At September 30, 2008, there were \$34.9 million of irrevocable letters of credit outstanding, including \$3.3 million in support of certain environmental obligators and \$31.6 million to secure transportation services for crude oil.

Off-Balance Sheet Arrangements

We had no off-balance sheet arrangements as of September 30, 2008.

Recent Accounting Pronouncements

In September 2006, the Financial Accounting Standards Board (FASB) issued Statement on Financial Accounting Standards (SFAS) No. 157, *Fair Value Measurements*, which establishes a framework for measuring fair value in GAAP and expands disclosures about fair value measurements. SFAS 157 states that fair value is the price that would be received to sell the asset or paid to transfer the liability (an exit price), not the price that would be paid to acquire the asset or received to assume the liability (an entry price). The standard's provisions for financial assets and financial liabilities, which became effective January 1, 2008, had no material impact on the Company's financial position or results of operations. At September 30, 2008, the only financial assets and financial liabilities that are within the scope

of SFAS 157 and measured at fair value on a recurring basis are the Company's derivative instruments. See Note 15, Fair Value Measurements.

In February 2008, the FASB issued FASB Staff Position 157-2 which defers the effective date of SFAS 157 for nonfinancial assets and nonfinancial liabilities, except for items that are recognized or disclosed at fair value in an

Table of Contents

entity's financial statements on a recurring basis (at least annually). The Company will be required to adopt SFAS 157 for these nonfinancial assets and nonfinancial liabilities as of January 1, 2009. Management believes the adoption of SFAS 157 deferral provisions will not have a material impact on the Company's financial position or earnings.

In March 2008, the FASB issued SFAS No. 161, *Disclosures about Derivative Instruments and Hedging Activities* an amendment of FASB Statement No. 133. This statement will change the disclosure requirements for derivative instruments and hedging activities. Entities are required to provide enhanced disclosures about how and why an entity uses derivative instruments, how derivative instruments and related hedged items are accounted for under Statement 133 and its related interpretations, and how derivative instruments and related hedged items affect an entity's financial position, net earnings, and cash flows. The Company will be required to adopt this statement as of January 1, 2009. The adoption of SFAS 161 is not expected to have a material impact on the Company's consolidated financial statements.

Critical Accounting Policies

The Company's critical accounting policies are disclosed in the Critical Accounting Policies section of our Annual Report on Form 10-K/A for the year ended December 31, 2007. In addition to the accounting policies discussed in our 2007 Form 10-K/A, the following accounting policy has been updated.

Receivables From Insurance

As of September 30, 2008, we have incurred total gross costs of approximately \$154.6 million as a result of the 2007 flood and crude oil discharge. During this period, we have maintained insurance policies that were issued by a variety of insurers and which covered various risks, such as property damage, interruption of our business, environmental cleanup costs, and potential liability to third parties for bodily injury or property damage. Accordingly, as of September 30, 2008, we have recognized receivables of approximately \$104.2 million related to these gross costs incurred that we believe are probable of recovery from the insurance carriers under the terms of the respective policies. As of September 30, 2008, we have collected approximately \$49.5 million of these receivables. Subsequent to September 30, 2008 we received an additional \$9.8 million advance payment for unallocated property damage. As of November 6, 2008, the total amount of insurance recoveries received was \$59.3 million.

We have submitted voluminous claims information to, and continue to respond to information requests from, the insurers with respect to costs and damages related to the 2007 flood and crude oil discharge. Our property insurers have raised a question as to whether the Company's facilities are principally located in Zone A, which was, at the time of the flood, subject to a \$10 million insurance limit for flood, or Zone B which was, at the time of the flood, subject to a \$300 million insurance limit for flood. The Company has reached an agreement with certain of its property insurers representing approximately 32.5% of its total property coverage for the flood-damaged facilities that our facilities are principally located in Zone B and therefore subject to the \$300 million limit for flood. Our remaining property insurers have not, at this time, agreed to this position. In addition, our excess environmental liability insurance carrier has asserted that our pollution liability claims are for cleanup, which is not covered, rather than for property damage, which is covered to the limits of the policy. While we will vigorously contest the excess carrier's position, we contend that if that position were upheld, our umbrella Comprehensive General Liability policies would continue to provide coverage for these claims. Each insurer, however, has reserved its rights under various policy exclusions and limitations and has cited potential coverage defenses. Ultimate recovery will be subject to litigation which was filed in July 2008.

There is inherent uncertainty regarding the ultimate amount or timing of the recovery of the insurance receivable because of the difficulty in projecting the final resolution of our claims. The difference between what we ultimately receive under our insurance policies compared to the receivable we have recorded could be material to our

consolidated financial statements.

Table of Contents**Collective Bargaining Agreements**

We are a party to collective bargaining agreements which as of September 30, 2008 covered approximately 39% of our employees (all of whom work in our petroleum business) with the six unions of the Metal Trades Department of the AFL-CIO (Metal Trades Unions) and the United Steelworkers of America. A new agreement was recently reached with the Metal Trade Union effective August 31, 2008. The new agreement will expire in March 2013. No substantial changes were made to the agreement. The agreements with the United Steelworkers of America are scheduled to expire in March 2009.

Item 3. *Quantitative and Qualitative Disclosures About Market Risk*

The risk inherent in our market risk sensitive instruments and positions is the potential loss from adverse changes in commodity prices and interest rates. Information about market risks for the nine months ended September 30, 2008 does not differ materially from that discussed under Part I Item 3 of our Quarterly Report on Form 10-Q for the quarter ended March 31, 2008. We are exposed to market pricing for all of the products sold in the future both at our petroleum business and the nitrogen fertilizer business, as all of the products manufactured in both businesses are commodities. As of September 30, 2008, all \$485.5 million of outstanding debt under our credit facility was at floating rates; accordingly, an increase of 1.0% in the LIBOR rate would result in an increase in our interest expense of approximately \$4.9 million per year. None of our market risk sensitive instruments are held for trading.

Our earnings and cash flows and estimates of future cash flows are sensitive to changes in energy prices. The prices of crude oil and refined products have fluctuated substantially in recent years. These prices depend on many factors, including the overall demand for crude oil and refined products, which in turn depend on, among other factors, general economic conditions, the level of foreign and domestic production of crude oil and refined products, the availability of imports of crude oil and refined products, the marketing of alternative and competing fuels, the extent of government regulations and global market dynamics. The prices we receive for refined products are also affected by factors such as local market conditions and the level of operations of other refineries in our markets. The prices at which we can sell gasoline and other refined products are strongly influenced by the price of crude oil. Generally, an increase or decrease in the price of crude oil results in a corresponding increase or decrease in the price of gasoline and other refined products. The timing of the relative movement of the prices, however, can impact profit margins, which could significantly affect our earnings and cash flows.

Item 4. *Controls and Procedures****Evaluation of Disclosure Controls and Procedures***

We have established disclosure controls and procedures (Disclosure Controls) to ensure that information required to be disclosed in the Company's reports filed under the Securities Exchange Act of 1934, as amended, is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms. Disclosure Controls are also designed to ensure that such information is accumulated and communicated to management, including the Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure. Our Disclosure Controls were designed to provide reasonable assurance that the controls and procedures would meet their objectives. Our management, including the Chief Executive Officer and Chief Financial Officer, does not expect that our Disclosure Controls will prevent all error and fraud. A control system, no matter how well designed and operated, can provide only reasonable assurance of achieving the designed control objectives and management is required to apply its judgment in evaluating the cost-benefit relationship of possible controls and procedures. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur

because of human error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusions of two or more people, or by management override of the control. Because of the inherent limitations in any control system, misstatements due to error or fraud may occur and not be detected.

Table of Contents

At March 31, 2008, we identified material weaknesses in our internal controls relating to the calculation of the cost of crude oil purchased by us and associated financial transactions. Specifically, our policies and procedures for estimating the cost of crude oil and reconciling these estimates to vendor invoices were not effective. Additionally, our supervision and review of this estimation and reconciliation process was not operating at a level of detail adequate to identify the deficiencies in the process. Management concluded that these deficiencies were material weaknesses. A material weakness is a deficiency, or a combination of deficiencies, in internal control over financial reporting, such that there is a reasonable possibility that a material misstatement of the Company's annual or interim financial statements will not be prevented or detected on a timely basis.

In order to remediate the material weaknesses described above, our management has been actively engaged in the planning for, design, and implementation of remediation efforts to enhance controls to ensure the proper accounting for the calculation of the cost of crude oil. As a result of the plan and development of the initiatives to remediate the material weaknesses, we have centralized all crude oil cost accounting functions and have added additional layers of accounting review with respect to our crude oil cost accounting. Also, additional layers of business review in conjunction with the accounting review of the computation of our crude oil costs have been added. As of September 30, 2008, the testing of the controls that have been put in place was not completed and as a result, the material weaknesses have not been fully remediated.

As of the end of the period covered by this Form 10-Q, we evaluated the effectiveness of the design and operation of our Disclosure Controls and included consideration of the material weaknesses initially disclosed in our Annual Report on Form 10-K/A for the year-ended December 31, 2007. The evaluation of our Disclosure Controls was performed under the supervision and with the participation of management, including our Chief Executive Officer and Chief Financial Officer, and included consideration of the material weaknesses described above. Based on this evaluation, because the testing of the controls that have been put in place has not been completed, our Chief Executive Officer and Chief Financial Officer have concluded that our Disclosure Controls and procedures were not effective as of the end of the period covered by this Quarterly Report on Form 10-Q because of the material weaknesses described above.

Even in light of these material weaknesses, based on a number of factors, including efforts to remediate the material weaknesses discussed above and the performance of additional procedures by management to ensure the reliability of our financial reporting, we believe that the consolidated financial statements in the report fairly present, in all material respects, our financial position, results of operations, and cash flows as of the dates, and for the periods presented, in conformity with generally accepted accounting principles (GAAP).

We anticipate that the design, implementation, and required testing of new processes and controls to remediate the material weaknesses described above will be complete as of and for the year ended December 31, 2008. The estimated costs associated with the remediation efforts are approximately \$710,000, which amount includes a portion of the additional payroll expense associated with the remediation efforts.

Changes in Internal Control Over Financial Reporting

No changes in our internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Securities Exchange Act of 1934, as amended), except with respect to changes made to remediate the material weaknesses described above, occurred during the third quarter of 2008 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting. We are, however, currently continuing remedial actions to address the material weaknesses described above under Evaluation of Disclosure Controls and Procedures. In our efforts to remediate the material weaknesses, management has engaged a third-party firm to assist us in performing a comprehensive analysis of our control and processes over the calculation and recording of crude oil purchased by us.

During the second and third quarter, we began the implementation of the remedial measures described above including the design and implementation of additional key accounting controls and processes related to the calculation of the cost of crude oil.

Table of Contents**Part II. Other Information****Item 1. *Legal Proceedings***

The following supplements and amends our discussion set forth under Item 3 *Legal Proceedings* in our Annual Report on Form 10-K/A for the fiscal year ended December 31, 2007, and under Item 1 *Legal Proceedings* in our Quarterly Report on Form 10-Q for the quarter ended June 30, 2008.

As described in our quarterly report on form 10-Q for the quarter ended June 30, 2008, we filed two lawsuits in the United States District Court for the District of Kansas on July 10, 2008 against certain of our insurance carriers with regard to our insurance coverage for the flood and crude oil discharge that occurred during the weekend of June 30, 2007. In *Coffeyville Resources Refining & Marketing, LLC (CRRM), et al. v. National Union Fire Insurance Company of Pittsburgh, PA, et al.*, we are seeking a declaratory judgment against certain of our property insurers that our damaged facilities are located principally in *Zone B*, which was, at the time of the flood, subject to a \$300 million insurance limit for flood, and not in *Zone A*, which was, at the time of the flood, subject to a \$10 million flood insurance limit. Property insurers representing approximately 32.5% of our total property coverage for the flood have agreed with our position that our property is located principally in *Zone B* and have signed a settlement agreement with us to the effect that our flood damaged property is principally located in the areas subject to the \$300 million insurance limit for flood. In *CRRM v. Liberty Surplus Insurance Corporation, et al.*, we sued our environmental insurance liability carriers for breach of contract on the grounds that our pollution liability claims are covered to the limits of our environmental pollution policies and payment by the carriers under such policies has not been made. Our primary environmental liability carrier subsequently paid its full policy limit and has been dismissed from the pollution insurance case.

Item 1A. *Risk Factors*

See *Risk Factors* attached hereto as Exhibit 99.1 for a discussion of risks our business may face.

Item 6. *Exhibits*

Number	Exhibit Title
10.1	Amendment to Amended and Restated Crude Oil Supply Agreement, dated as of September 26, 2008, between Coffeyville Resources Refining & Marketing, LLC and J. Aron & Company.
10.2	Amended and Restated Settlement Deferral Letter, dated as of October 11, 2008, between Coffeyville Resources, LLC and J. Aron & Company.
10.3	First Amendment to Amended and Restated On-Site Product Supply Agreement, dated as of October 31, 2008, between Coffeyville Resources Nitrogen Fertilizers, LLC and Linde, Inc.
10.4	Second Amendment to Amended and Restated Crude Oil Supply Agreement dated as of October 31, 2008, between Coffeyville Resources Refining & Marketing, LLC and J. Aron & Company.
